Washington, DC
1982

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 166 reports, articles and other documents announced during December 1981 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1981 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A81-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche (1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N81-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

## SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $70.00 domestic; $140.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

This bibliography of citations to the international literature covers aspects of altitude acclimatization. Included are articles concerning high altitude environments, hypoxia, heart function and hemodynamic responses, physical exercise, human tolerances and reactions, physiological responses, and oxygen consumption. This updated bibliography contains 164 citations, 35 of which are new entries to the previous edition. GRA

**A81-10775 *** **Renal responses to central vascular expansion are suppressed at night in conscious primates.** D. A. Kass, F. M. Sulzman, C. A. Fuller, and M. C. Moore-Ede (Harvard University, Boston, Mass.) *American Journal of Physiology*, vol. 239, Oct. 1980, p. F343-F351. 42 refs. Grant No. NsG-9054.

The renal and hemodynamic responses of squirrel monkeys to central vascular volume expansion induced by lower body positive pressure (LBPP) during the day and night are investigated. Twelve unanesthetized animals trained to sit in a metabolism chair in which they were restrained only at the waist by a partition separating upper and lower body chambers were subjected to 4 h of continuous LBPP during the day and night, and hemodynamic, urinary and drinking data were monitored. LBPP during day and night is found to induce similar increases in central venous pressure, rises in heart rate and elevations in mean arterial blood pressure. However, although daytime LBPP induced a significant increase in urine flow and sodium excretion, a marked nocturnal inhibition of the renal response to LBPP is observed. Analysis of the time course and circadian regulation patterns of the urinary responses suggests that several separate efferent control pathways are involved. A.L.W.

# AEROSPACE MEDICINE AND BIOLOGY

## *A Continuing Bibliography (Suppl. 227)*

JANUARY 1982

## IAA ENTRIES

**A81-47150** # **Oxygen provision to humans under conditions of high-altitude flight (Obespechenie cheloveka kislorodom v usloviiakh vysotnogo poleta).** L. G. Golovkin, V. A. Glazkova, I. V. Maksimov, and I. N. Cherniakov. *Voenno-Meditsinskii Zhurnal,* July 1981, p. 50, 51. In Russian.

Human functional responses during the use of the KP-56 oxygen supply system with an open-type face mask, allowing the mixture of supplied oxygen with cabin air, are investigated under simulated high-altitude conditions. Electrocardiograms, respiratory frequency, alveolar gas composition and blood oxygen levels were determined and psychophysiological responses were evaluated in 10 healthy subjects wearing the KM-15M mask at a simulated altitude of 8 km for up to 4 hours and at 10-12 km for up to 1 hour. Results demonstrate a normal oxygen supply after 4 hours at 8 km with the subjects performing physical and mental work, thus justifying the use of the KP-56 system with the KM-15M mask as a life-support system during extended flight in an uncompressed cabin. Signs of oxygen deprivation and cases of decompression sickness are observed at the higher altitudes, however, indicating that exposure in a depressurized cabin must be limited to less than 5-10 min. A.L.W.

**A81-47194** # **A comparative analysis of the biological effects of electromagnetic radiation. I - The nervous system (Sravnitel'nyi analiz biologicheskikh effektov elektromagnitnykh izluchenii. I - Nervnaia sistema).** V. V. Antipov, B. I. Davydov, and V. S. Tikhonchuk. *Kosmicheskie Issledovaniia,* vol. 19, July-Aug. 1981, p. 649-653. 27 refs. In Russian.

Data in the literature up to 1979 concerning the effects of nonionizing electromagnetic radiation on the nervous system is reviewed. Results obtained in clinical studies of workers exposed to electromagnetic radiation, particularly microwaves, in the industrial environment are considered which indicate a variety of complaints and symptoms appearing upon radiation exposure, including headaches, exhaustion, sleep disturbances, irritability and loss of memory, as well as vegetative impairments and changes in the electrical activity of the cerebral cortex. Disadvantages of the use of industrial experiments, in which radiation doses cannot be determined exactly and complicating factors may be presented, are pointed out. Results of laboratory experiments performed on humans and experimental animals are then outlined which demonstrate the high sensitivity and variability of response of the central nervous system to electromagnetic radiation, the polymorphism of changes, and the presence of a gradual decrease in reactions with decreasing dosage, and which exhibit caution in evaluating the pathological significance of the observed changes. Areas for further research on the effects of radiation flux density, exposure time and frequency and on the influence of other factors encountered in the space flight environment on nervous system reactions are indicated. A.L.W.

**A81-47383** **Closed ecosystems as the means for the outer space exploration by men /Experimental results, perspectives/.** I. I. Gitelson, I. A. Terskov, B. G. Kovrov, G. M. Lisovskii, F. Ia. Sidko, Iu. N. Okladnikov, I. N. Trubachev, I. M. Pankova, I. V. Gribovskaia, and G. V. Denisov (Akademiia Nauk SSSR, Moscow, USSR). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-164.* 6 p.

Results of a four-month long experiment (carried out in the USSR and called BIOS-3) are presented for a closed-control ecosystem composed of humans and higher plants, with atmospheric moisture and a large part of the food being regenerated. A description of the system is presented, noting dimensions (a volume of 230 cu m, and an area of 90 sq m x 39.4 sq m) and details on the two phytotrons. Light energy is supplied by xenon lamps which imitate sunlight. Wheat is grown in the conveyor culture on a non-substrate medium, and chuffa is grown on ceramsit by the hydropone method. Conclusions are presented, including the necessity of solar energy utilization for the realization of photosynthesis in the life-support systems of space. K.S.

**A81-47384** **Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies.** E. L. Kordium, E. M. Nedukha, A. F. Popova, P. G. Sidorenko, V. M. Fomicheva, and K. M. Sytnik (Ukrainian Academy of Sciences, Institute of Botany, Kiev, Ukrainian SSR). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-165.* 8 p. 7 refs.

The effects of physical and dynamic space flight factors (weightlessness, magnetic fields, vibration, and acceleration) on the growth, reproduction, and structure of plant cells (algae, mosses, angiosperms, and higher plant cell cultures) are investigated by means of electron microscopy, cytophotometry, and autoradiography. Some of the results include the fact that changes in cell ultrastructure caused by vibration and acceleration were temporary and organelles of merismatic cells proved to be more sensitive to vibration than those of differentiated cells. It is concluded that many cellular and subcellular responses to space flight conditions are primarily due to weightlessness, and that many space flight biological effects are connected to the degree of complexity of the organization of the cell, and to the duration of the effects. K.S.

**A81-47385** **Advanced life support - Orbital work base.** M. A. Shuey (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-166.* 18 p. 6 refs.

A status report is presented on advanced life support technology applicable to a space station or 'orbital work base', with attention not merely to the formulation of requirements but also the identification of system elements that can be implemented with existing technology. The range of considerations presented comprises: (1) environmental control; (2) atmosphere revitalization; (3) water management; (4) waste management; (5) food service; (6) thermal control; (7) health and hygiene; (8) habitability, operations and safety; and (9) extravehicular activities. Special attention is given carbon dioxide management by means of solid amine and electrochemical processes, oxygen supply and water conservation. A series of recommendations on the most promising technologies for further research is given in conclusion. O.C.

**A81-47386** **Life support system development in West Germany.** A. I. Skoog (Dornier System GmbH, Friedrichshafen, West Germany). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-167.* 21 p.

A status report is given for spaceborne life support systems developed in Germany since the beginning of Spacelab Environmental Control and Life Support system (ECLS) studies in 1972, along with a series of terrestrial and marine CO2-absorber system offshoots. In addition to the ECLS, whose Atmosphere Revitalization Section (ARS) and Atmosphere Storage and Control Section (ASCS) are described in detail, such Spacelab follow-on developments as the 'Biorack' life science experiments life support system and closed ecological life support systems are considered. The closed ecological systems are intended for large, long mission duration space station designs that are currently at a conceptual development stage. Schematics and detailed mechanical drawings are given for major ECLS and Biorack system elements. O.C.

**A81-47387** **Experimental estimation of the functional possibilities of higher plants as medium regenerators in life support systems.** G. M. Lisovskii, I. A. Terskov, I. I. Gitelson, F. Ia. Sidko, B. G. Kovrov, M. P. Shilenko, V. I. Polonskii, and S. A. Ushakova (Akademiia Nauk SSSR, Moscow, USSR). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-169.* 5 p.

Experimental consideration is given to the use of such food crops as wheat, barley, carrots and beets as elements of a closed environmental system in which the 'day-night' period and illumination intensity (600-650 W/sq m) of the moon are assumed. Emphasis is put on the compatibility of the various kinds of plants with each other, with the technical facilities assumed and with man, as producers of edible biomass. Comparisons are made between biomass yields under continuous illumination and those obtained under intermittent, lunar conditions. O.C.

**A81-47388** **Simple technique to evaluate on the ground the energetic expenditure of physical exercise carried out in weightlessness.** A. Scano (Istituto Superiore di Educazione Fisica; Roma, Università, Rome, Italy). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-170.* 6 p.

A simple method is described to evaluate the energetic expenditure of graded muscular exercises carried out on the ground in such a way as to approximate the state of space microgravity. The consumption of O2 measured at different rates of execution is shown as well as a tentative computation of the mechanical work on the basis of the accelerations impressed alternately on the mass of the trunk and upper limbs. The practicability of the method proposed under space conditions is pointed out; it does not require any ergometer, in fact, but only the fixing of the subject's feet to the floor of the vehicle. (Author)

**A81-47389 *** **Development of an Animal Holding Facility for Space Shuttle studies.** W. E. Berry, G. H. Bowman (NASA, Ames Research Center, Life Sciences Flight Experiments Projects Office, Moffett Field, CA), R. B. Jagow, and T. M. Olcott (Lockheed Missiles and Space Co., Inc., Sunnyvale, CA). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-171.* 15 p.

The modular Research Animal Holding Facility (RAHF) developed by NASA is described. Besides providing general housing for various animal species, the RAHF is designed to minimize disturbance of the specimens caused by vehicle and mission operations. The RAHF system offers life-sustaining capabilities, such as food, water, and waste removal, as well as environmental control. Modularity of construction to accommodate a variety of small animals and associated instrumentation ensures continued use of RAHF as the sophistication of experiments increases on subsequent missions. C.R.

**A81-47390** **Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach.** P. Ascenzi, G. Amiconi (Roma, Università, Rome, Italy), and A. Scano (Istituto Superiore di Educazione Fisica, Rome, Italy). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-175.* 6 p.

A kinetic analysis is made of changes in some physiological parameters due to changes in gravitational environment, to investigate adaptation to weightlessness in Skylab flights. A single mathematical model is devised, and it is assumed that the body may undergo any kinetic process only if the process is continuously differentiable. The process is determined by several external conditions which are identified with the gravity, and experimental data are presented and compared to determine the effects of different periods of exposure to weightlessness. The data are linearized by semilogarithmic plots, and indicate that the adaptation of the body mass to weightlessness takes place in two phases characterized by half-time values of 5 and 15 days, and the adaptation phenomena related to restoration of the body mass after recovery on the earth are characterized by two phases with half-time values of 2 and 10 days. D.L.G.

**A81-47391** **Relative efficacy of the proposed Space Shuttle antimotion sickness medications.** J. R. Horcinsky, J. Beier, E. Schwartz, and J. Martin (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Cologne, West Germany). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-177.* 31 p. 13 refs.

The relative efficacies and side effects of treatments to be used to prevent and ameliorate space motion sickness on Space Shuttle flights are investigated. Nine subjects who had displayed sensitivity to motion sickness in preliminary tests were given transdermal injections of scopolamine, intramuscular injections of promethazine and oral doses of scopolamine-dextroamphetamine and promethazine-ephedrine combinations in a double-blind experiment employing standardized head movements during acceleration at a rate of 0.2 deg/sec per sec to a maximum rotation of 240 deg/sec, with an intermediate plateau of 10 min at 180 deg/sec. Visual tests, objective psychological tests and tilt table orthostatic response tests were also performed to assess other system influences of the drugs. The promethazine-ephidrine combination is found to produce the most drastic side effects and mood changes, producing sleepiness, dizziness and subjective vision difficulty. No significant decrements in the psychological performance were obtained with transdermal scopolamine or scopolamine-dextroamphetamine, although transient hyperactivity changing to fatigue and light depression was observed with the latter. The intramuscular injection was found to lead to marked absolute performance decrements, extreme fatigue, and resignation. It is noted that the transdermal scopolamine provided an adequate anti-motion-sickness effectiveness associated with the least significant side effects, although no more than one day's use may as yet be recommended for prophylaxis. A.L.W.

**A81-47392** **Antiorthostatic hypokinesia as a means of simulating weightlessness.** Y. G. Zorbas and S. Shoja. *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-178.* 6 p. 15 refs.

In simulating acute weightlessness, the physiological effects of seven days of clinostatic hypokinesia (CSHK) and antiorthostatic hypokinesia (AOHK) were investigated on 12 physically healthy men from 18 to 23 years of age. They were divided into four groups with three men in each: the first group of men subjected to CSHK (zero deg); the second, third and fourth groups were submitted to AOHK tilting at -4, -8 and -12 deg, respectively. An ordinary diet and unrestricted amount of fluid was provided. Postural equilibrium state of men, their reactions to orthostatic tests, ergometric tests, with measured physical training (PT) of 600 kg-m/min, heart rate, arterial pressure, oxygen uptake (OU) and the amount of oxygen utilized by the body with maximum load per systolic volume (OU/SV) were determined. It was established that AOHK at angles of -4 and -12 deg simulated much better physiological effects of actual weightlessness than CSHK. It can be concluded that AOHK makes it possible to simulate man's acute adaptational reactions to weightlessness. (Author)

**A81-47393** **Metabolic changes in the animals subjected to flight in the biosatellites 'Cosmos'.** L. Macho, S. Nemeth, R. Kvetnansky, M. Fickova (Slovenska Akademia Vied, Ustav Experimentalnej Endokrinologie, Bratislava, Czechoslovakia), and R. A. Tigranian (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-179.* 10 p. 20 refs.

The effects of space flight conditions on enzymes involved in amino acid metabolism and on lipolytic processes are investigated. Enzyme activities and lypolytic responses were determined in adult male rats flown on the Cosmos 1129 biosatellite for 18.5 days immediately following landing and after a recovery period of six days, and compared with those of animals subjected to simulated space flight conditions (except weightlessness) and controls. Increases in plasma corticosterone levels and the activities of enzymes with a rapid response to glucocorticoids (tyrosine aminotransferase, tryptophan pyrrolase, serine dehydratase) and with a response to chronic corticosterone levels (alanine aminotransferase, aspartate aminotransferase) were found in the flight animals following flight, suggesting the presence of acute-stress- and chronic-stress-induced hypercorticosteronemia. Plasma corticosterone levels and enzyme activities were observed to return to control levels following the recovery period. No changes in basal lipolysis were observed in the flight rats, however both the flight rats and the ground simulation controls exhibited a lower sensitivity to lipolysis stimulation by norepinephrine both directly after the flight and following recovery. A.L.W.

**A81-47394 *** **Space Shuttle life support systems - A status report.** M. A. Faget and W. W. Guy (NASA, Johnson Space Center Engineering and Development Directorate, Houston, TX). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-181*. 50 p.

The Space Shuttle Program has two independent life support systems. One provides the basic environmental control for the Orbiter cabin while the second enables the crewmen to function outside the spacecraft for extravehicular operation. Although both of these systems were developed and fabricated under contract to NASA, all system-level testing was conducted at the Johnson Space Center. The paper will discuss the results of this testing which, in part, includes: (1) certification of the Orbiter cabin atmospheric pressure and composition control system at three operational pressures (8 psia, 9 psia and 14.7 psia); (2) certification of the Orbiter atmospheric revitalization system at 9 psia and 14.7 psia; (3) manrating of the Orbiter airlock at 14.7 psia, 9 psia and vacuum; and (4) certification of the space suit/life support system in the airlock and at deep space thermal/vacuum conditions. In addition, pertinent flight information from the on-orbit performance of the Shuttle life support systems will be presented. (Author)

**A81-47424** **Italy's contribution, from a medical standpoint, to the space safety of payload scientists, and perspectives for the future.** G. Rotondo (Aeronautica Militare, Servizio di Sanità, Rome, Italy), C. A. Ramacci (Scuola Militare di Sanità Aeronautica, Rome, Italy), G. Meineri, F. Monesi (Aeronautica Militare, Centro Studi e Ricerche di Medicina Aeronautica e Spaziale, Rome, Italy), and G. C. Modugno (Roma, Università, Rome, Italy). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-250*. 9 p. 16 refs.

The physiological and functional selection procedures employed in the selection of Italian Spacelab payload specialist candidates are discussed. Following a brief review of preliminary investigations of human cpacities under conditions of weightlessness, attention is given to the physiological tests performed on those candidates who had passed a preliminary medical screening. The tests included a treadmill exercise test, and two acceleration tests designed to measure the tolerance of the 24 candidates (including two women) to vertical accelerations of up to 3 G for 10 minutes using electrocardiography and the critical flicker fusion test. The changes observed in critical flicker fusion frequency and heart rate were observed to correlate with subject fitness or unfitness, with critical flicker fusion being an earlier indicator. The need for the continuing development of selection criteria for scientific space personnel and neutrophysiological and psychological selection methods is pointed out. A.L.W.

**A81-47427** **On increasing reliability of cosmonaut-operator's activity.** N. V. Krylova and A. K. Bokovikov (Academy of Sciences of the USSR, Institute of Psychology, Moscow, USSR). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-255*. 6 p. 7 refs.

A technique is suggested which may be used to improve cosmonaut operator reliability in the performance of on-board tasks. The technique is designated operator reporting (OR) and consists of specially organized verbal communication which serves to maintain operator activity and provide a means of performance evaluation. Principles have been formulated concerning the organization of OR which ensure its relationship with the task involved, uniform usage and training in the techniques. Experimental studies with two-dimensional tracking tasks have demonstrated the effectiveness of OR in improving performance in the most complex control tasks. Requirements for the structure of OR have been derived from experimental studies which concern the informational content of the speech and its structural correlation with the optimum OR scheme. The technique may thus be used to achieve a fuller utilization of human activities to improve the operational reliability of the operator-spacecraft system. A.L.W.

**A81-47447 *** **Recent progress in exobiology and planetary biology.** T. H. Jukes (California, University, Berkeley, CA). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-308*. 12 p. 23 refs. Grant No. NGR-05-003-460.

Recent work in the fields of exobiology, the study of the possible characteristics of extraterrestrial life, and planetary biology, the study of life forms as a function of planetary conditions, is reviewed. Searches conducted for life on Mars by the Viking Landers and on Titan by Voyager 1 are considered, and the origin of life on earth is considered in relation to the question of the inorganic trace elements in living systems that are required for life. The question of the origin of terrestrial life from spores carried through the interstellar medium is examined, and the unlikelihood of the survival of such spores except within meteorites or dust particles is pointed out. Studies of organic molecules present in the interstellar medium are indicated as evidence that the conditions necessary for the formation of life can exist in various locations throughout the universe. Investigations of the molecular evolution of life on earth and of life under extreme conditions of heat, cold, drought and ultraviolet radiation, and of the organic compounds found in meteorites and comets are also discussed. The importance of a mechanism of heredity, such as terrestrial DNA, to the evolution of terrestrial and possible extraterrestrial life is pointed out. A.L.W.

**A81-47574 #** **Biological flows (Biologische Strömungen).** A. Naumann. *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-001*. 12 p. 37 refs. In German.

The importance of flow processes for the human body is considered, taking into account the blood circulation, respiration activities, and the secretion of urine. A survey is provided of investigations conducted at the Aerodynamical Institute of Aachen University, and the effect of shear stress on the blood cells is discussed. The critical shear stress which causes damage to the cells depends on the time during which the cells are subjected to the shear stress and on the form of the pulse wave. Hemolysis and thrombosis are the most important symptoms in case of a critical narrowing of the vessels through which the blood passes. Flow studies conducted in connection with the development of a blood pump are also discussed. G.R.

**A81-47665** **Moving and the motion after-effect.** L. R. Harris, M. J. Morgan, and A. W. Still (Durham, University, Durham, England). *Nature*, vol. 293, Sept. 10, 1981, p. 139-141. Medical Research Council Grant No. G-977/865/N.

The role of observer motion in the occurrence of the movement after-effect is investigated in relation to the hypothesis that the after-effect represents a recalibration of the relationship between optical and other information. In the experiment, both the observer and the display showing centrifugal or centripetal motion were mounted on a trolley that was moved backwards and forwards. Subject responses, monitored by the method of cancellation, revealed a very small motion after-effect after viewing an expanding pattern during forward motion in contrast to larger after-effects found in the three other possible combinations of pattern and observer motion. The results do not entirely conform to the hypothesis of recalibration, as the expected enhancement of the effect under conditions of incompatible self motion and the suppression of the effect of a contracting pattern during backward self motion are not observed, although a clear influence of self motion on the visual after-effect is demonstrated. A.L.W.

**A81-47672** **Determination of otolith afferent response parameters using small amplitude sinusoidal roll and pitch tilts.** R. J.

Peterka (Eye and Ear Hospital, Pittsburgh, PA). *IEEE Transactions on Biomedical Engineering,* vol. BME-28, Sept. 1981, p. 624-630. 13 refs.

Previous methods for the determination of the orientation of the preferred response axis of individual afferent neurons innervating the otolith organs have required the rotation of an animal through a full 360 deg about its pitch and roll axes while maintaining a microelectrode recording of a single neuron. The present paper presents a more practical method for the determination of the polarization vector, sensitivity and zero-force discharge rate of a neuron from data collected during small-amplitude sinusoidal roll and pitch tilts. The method is derived from an expression relating the neuronal discharge rate to the effective force experienced by the otolith in terms of the polarization vector, and may be used for both tonic afferents, in which frequency-dependent dynamic effects are small, and phasic afferents, although a modification taking into account dynamic properties is preferable in the latter case. Results of simulations of otolith afferent responses are presented which demonstrate the accuracy of the method in identifying tonic otolith afferent response parameters and the effects of phasic otolith properties. A.L.W.

**A81-47673** **Algorithms for the clinical analysis of nystagmus eye movements.** C. Wall, III and F. O. Black (Eye and Ear Hospital, Pittsburgh, PA). *IEEE Transactions on Biomedical Engineering,* vol. BME-28, Sept. 1981, p. 638-646. 20 refs.

Two algorithms used in the clinical analysis of nystagmus are described. Their development was necessitated by the greater complexity of the nystagmus waveforms in response to system identification types of vestibular and optokinetic stimuli as compared to the less complex response to a step input. Practical considerations for clinical application also influenced their development. The first algorithm converts nystagmus data into a regularly sampled estimate of slow phase velocity (SPV), an important feature of the signal. It uses a new set of fast phase detection conditions which allow for automatic processing of reversals in nystagmus direction and for wide variability for clinical data. The second algorithm detects noise induced spikes in this SPV estimate using an adaptive criterion based upon a measure of the overall 'noisiness' of the data compared to the stimulus. (Author)

**A81-47674** **Effects of microwave irradiation on human blood platelets.** M. L. Piana (Engineering Science, Inc., Austin, TX), J. D. Hellums, and W. L. Wilson, Jr. (Rice University, Houston, TX). *IEEE Transactions on Biomedical Engineering,* vol. BME-28, Sept. 1981, p. 661-664. 18 refs.

The response of human blood platelet functions to microwave irradiation is investigated. Platelets were exposed to continuous radiation at 2.45 GHz and 40 mW/sq cm in citrate-anticoagulated platelet-rich plasma for up to 2 h, and platelet aggregation, lysis, membrane permeability, release reaction stimulation and ADP aggregration response properties were determined and compared to those of block-heated and nonheated controls. No significant changes in lysis or permeability are found in the irradiated or control platelets, while both microwave irradiation and heating are found to stimulate serotonin release, induce aggregation, and impair platelet aggregation function. It is thus concluded that the effects of microwave irradiation on human blood platelet functions are entirely thermal in nature. A.L.W.

**A81-47675 *** **A new CT collimator for producing two simultaneous overlapping slices from one scan.** Y. S. Kwoh, W. V. Glenn, Jr. (Long Beach, Memorial Hospital Medical Center, Long Beach, CA), I. S. Reed (Southern California, University, Los Angeles, CA), and T. K. Truong (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *IEEE Transactions on Biomedical Engineering,* vol. BME-28, Sept. 1981, p. 664-667. Research supported by the Children and Memorial Research Foundation; Grant No. AF-AFOSR-80-0151; Contract No. NAS7-100.

A new CT collimator is developed which is capable of producing two simultaneous successive overlapping images from a single scan. The collimator represents a modification of the standard EMI 5005 collimator achieved by alternately masking one end or portions of both ends of the X-ray detectors at a 13-mm beamwidth so that a set of 540 filtered projections is obtained for each scan which can be separated into two sets of interleaved projections corresponding to views 3 mm apart. Tests have demonstrated that the quality of the images produced from these two projections almost equals the quality of those produced by the standard collimator from two separate scans. The new collimator may thus be used to achieve a speed improvement in the generation of overlapping sections as well as a reduction in X-ray dosage. A.L.W.

**A81-47847 *** **The use of ultrasonic spectroscopy to characterize calcified lesions.** J. A. Rooney (Maine, University, Orono, ME), P. M. Gammell (California Institute of Technology, Jet Propulsion Laboratory, Pasadena; Southern California, University, Los Angeles, CA), J. D. Hestenes (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA), H. P. Chin, and D. H. Blankenhorn (Southern California, University, Los Angeles, CA). *IEEE Transactions on Sonics and Ultrasonics,* vol. SU-28, Sept. 1981, p. 291-297. 14 refs. NASA-supported research; Grant No. NIH-N01-HV-7-2930.

A quantitative basis is developed for the medical application of ultrasonic spectroscopy, particularly in the characterization of calcified lesions associated with atherosclerotic conditions. A theory of the field radiation patterns of disk and ring sources is presented which can be used to predict minima in the reflection spectra of a target as a function of frequency and angle relative to the acoustic axis. The theory is then tested experimentally for objects of known geometry by the use of a time delay spectroscopy system using a swept frequency technique, and results are obtained which demonstrate the usefulness of the technique. Finally, the theory is verified in the determination of lesion diameter and orientation from spectra received from calcified lesions on in vitro arterial specimens as a function of angle. A.L.W.

**A81-47894 * #** **Scaling of metabolic rate on body mass in small laboratory mammals.** N. Pace, D. F. Rahlmann, and A. H. Smith (California, University, Berkeley, CA). *International Union of Physiological Sciences, International Congress of Physiological Sciences and International Exhibition of Medical Instruments, 28th, Budapest, Hungary, July 13-19, 1980, Paper.* 5 p. 5 refs. Grant No. NsG-7336.

The scaling of metabolic heat production rate on body mass is investigated for five species of small laboratory mammal in order to define selection of animals of metabolic rates and size range appropriate for the measurement of changes in the scaling relationship upon exposure to weightlessness in Shuttle/Spacelab experiment. Metabolic rates were measured according to oxygen consumption and carbon dioxide production for individual male and female Swiss-Webster mice, Syrian hamsters, Simonsen albino rats, Hartley guinea pigs and New Zealand white rabbits, which range in mass from 0.05 to 5 kg mature body size, at ages of 1, 2, 3, 5, 8, 12, 18 and 24 months. The metabolic intensity, defined as the heat produced per hour per kg body mass, is found to decrease dramatically with age until the animals are 6 to 8 months old, with little or no sex difference. When plotted on a logarithmic graph, the relation of metabolic rate to total body mass is found to obey a power law of index 0.676, which differs significantly from the classical value of 0.75. When the values for the mice are removed, however, an index of 0.749 is obtained. It is thus proposed that six male animals, 8 months of age, of each of the four remaining species be used to study the effects of gravitational loading on the metabolic energy requirements of terrestrial animals. A.L.W.

**A81-47982 #** **The application of robotic sensors - A survey and assessment.** W. H. Boykin and R. G. Diaz (Florida, University, Gainesville, FL). In: Advances in computer technology - 1980. Volume 1 - Proceedings of the International Computer Technology Conference, San Francisco, CA, August 12-15, 1980. New York, American Society of Mechanical Engineers, 1980, p. 160-165. 48 refs. Contract No. ER-78-S-05-6102.

Sensor applicable to general purpose robotic manipulators were surveyed and assessed. Computized literature searches aided the survey. The assessment classified the sensors according to the basic wave length or physical spectrum: photoreceptors, mechanoreceptors, chemoreceptors, thermoreceptors and electromagnetic receptors. Sensors were also classified as imaging and nonimaging. Imaging sensors are further classified as video and others. Among the major conclusions is the finding that although significant research has been done across the sensor spectrum, little integrated sensor work has been performed and even less of the sensor work has been in maturing the technology for production. (Author)

**A81-47986 * #** **Kinesthetic coupling between operator and remote manipulator.** A. K. Bejczy (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) and J. K. Salisbury, Jr. (Stanford University, Stanford, CA). In: Advances in computer technology - 1980. Volume 1 - Proceedings of the International Computer Technology Conference, San Francisco, CA, August 12-15, 1980. New York, American Society of Mechanical Engineers, 1980, p. 197-211. 12 refs. Contract No. NAS7-100.

A universal force-reflecting hand controller has been developed which allows the establishment of a kinesthetic coupling between the operator and a remote manipulator. The six-degree-of-freedom controller was designed to generate forces and torques on its three positional and three rotational axes in order to permit the operator to accurately feel the forces encountered by the manipulator and be as transparent to operate as possible. The universal controller has been used in an application involving a six-degree-of-freedom mechanical arm equipped with a six-dimensional force-torque sensor at its base. In this application, the hand controller acts as a position control input device to the arm, while forces and torques sensed at the base of the mechanical hand back drive the hand controller. The positional control relation and the back driving of the controller according to inputs experienced by the force-torque sensor are established through complex mathematical transformations performed by a minicomputer. The hand controller is intended as a development tool for investigating force-reflecting master-slave manipulator control technology. A.L.W.

**A81-47988 #** **Robotic actuators - A technology assessment.** R. G. Diaz and W. H. Boykin, Jr. (Florida, University, Gainesville, FL). In: Advances in computer technology - 1980. Volume 1 - Proceedings of the International Computer Technology Conference, San Francisco, CA, August 12-15, 1980. New York, American Society of Mechanical Engineers, 1980, p. 225-232. 32 refs. Contract No. ER-78-S-05-6102.

Robotic technology is comprised of many component technologies. Actuator technology is one of the least formally understood. Robotic actuators produce the forces used to affect tasks in the work scene and in teleoperators provide force feedback to operators. Robotic actuator technology was assessed by: considering basic actuator technology, developing design criteria and performance parameters for optimal actuators, comparing actuators considered, relative to the parameters and finally identifying promising new concepts and developments in the technology. The complete set of conclusions presented demonstrates that actuator technology is a fundamental component of robotic technology; one which offers tremendous potential for development. (Author)

**A81-47990 #** **A novel design for a robot arm.** E. F. Fichter and E. D. McDowell (Oregon State University, Corvallis, OR). In: Advances in computer technology - 1980. Volume 1 - Proceedings of the International Computer Technology Conference, San Francisco, CA, August 12-15, 1980. New York, American Society of Mechanical Engineers, 1980, p. 250-256. 6 refs. Research supported by the Oregon State University.

An alternative to the conventional open kinematic chain design of a robot arm is discussed. Advantages of the traditional anthropomorphic design with respect to reach, range of motion and capability of entering a small hole and disadvantages with respect to cantilever structure and kinematic indeterminacy are pointed out and compared with those of a robot arm based on a closed kinematic chain, which eliminates the problems caused by kinematic indeterminacy and is rigidly supported but is limited in reach and range of motion. The Stewart Platform is then introduced as an example of a three-dimensional closed-chain manipulator mechanism, which is based on an octahedral geometry with a rigid base and platform capable of assuming any position and orientation within a limited volume of space. Control involves the verification that the desired position is within the range of feasibility and the determination of the proper lengths of the six legs supporting the platform. Applications for a manipulator device based on the Stewart Platform exist in material handling, assembly and shaping and coating tasks and in tasks where rotational motion is more important than translational motion. A.L.W.

**A81-48006 *** **A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task.** B. T. McKissick, B. R. Ashworth, R. V. Parrish (NASA, Langley Research Center, Hampton, VA), and D. J. Martin, Jr. (Sperry Support Services, Hampton, VA). In: Annual Simulation Symposium, 13th, Tampa, FL, March 19-21, 1980, Record of Proceedings. Tampa, FL, Annual Simulation Symposium, 1980, p. 227-246. 9 refs.

NASA's Langley Research Center conducted a simulation experiment to ascertain the comparative effects of motion cues (combinations of platform motion and g-seat normal acceleration cues) on compensatory tracking performance. In the experiment, a full six-degree-of-freedom YF-16 model was used as the simulated pursuit aircraft. The Langley Visual Motion Simulator (with in-house developed wash-out), and a Langley developed g-seat were principal components of the simulation. The results of the experiment were examined utilizing univariate and multivariate techniques. The statistical analyses demonstrate that the platform motion and g-seat cues provide additional information to the pilot that allows substantial reduction of lateral tracking error. Also, the analyses show that the g-seat cue helps reduce vertical error. (Author)

Miquel (NASA, Ames Research Center, Biomedical Div., Moffett Field, CA). *Experimental Gerontology*, vol. 16, no. 3, 1981, p. 287-293. 18 refs.

**A81-48074** **Norepinephrine turnover in lung - Effect of cold pressure and chronic hypoxia.** T. S. Johnson, J. B. Young, and L. Landsberg (Beth Israel Hospital; Harvard University, Boston, MA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Sept. 981, p. 614-620. 26 refs. Research supported by the Beth Israel Hospital; Grants No. PHS-AM-20378; No. PHS-RR-01302.

Sympathetic nervous system activity in the lung during cold exposure and hypoxia is investigated by the monitoring of norepinephrine turnover in rat lung. Following preliminary validation studies of the measurement of tritiated norepinephrine turnover as an indicator of sympathetic activity, norepinephrine turnover rate was measured in the lungs of rats exposed to hypobaric hypoxia at a simulated altitude of 5500 m for seven days, or a temperature of 4 C in a cold room for 24 hours. Results demonstrate that the labeled norepinephrine injected into the rats is taken up by the sympathetic nerve endings, stored within the pool of endogenous norepinephrine and released in response to sympathetic nerve impulses. Norepinephrine turnover rates are observed to increase in response to both chronic hypoxia and cold exposure, thus indicating an increase in sympathetic activity. A.L.W.

**A81-48075** **Osmoregulation and interstitial fluid pressure changes in humans during water immersion.** S. S. Khosla and A. B. DuBois (John B. Pierce Foundation Laboratory, New Haven, CT). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Sept. 1981, p. 686-692. 28 refs. Grants No. NIH-RR-125; No. NIH-HL-17407.

The mechanisms of the observed fluid shifts and intracellular osmoregulatory changes accompanying diuresis upon water immersion in man are investigated. Urinary and plasma electrolyte concentrations, plasma amino acid concentrations and interstitial fluid pressures were measured in subjects before, during and after immersion in 34 C water up to their necks for 1 hour. In experiments where vasopressin was administered prior to immersion, urinary sodium, potassium and osmolal clearances are found to increase significantly during immersion, accompanied by decreases in hematocrit, plasma sodium, chloride and potassium concentrations, osmolality and proteins and increases in total plasma CO2 content, threonine, proline, methionine and alanine, plasma volume and red blood cell volume. In experiments without vasopressin injection, interstitial fluid pressure is observed to decrease on the average by up to 2.10 cm H2O during immersion. It is concluded that hyposmotic fluid is mobilized into the blood from interstitial and other extravascular spaces, probably including intracellular volumes, during immersion. A.L.W.

**A81-48119** **The evolutionary development of vertebrate thermoregulation.** L. I. Crawshaw (Portland State University, Portland, OR), B. P. Moffitt (Lehman College, Bronx, NY), J. A. Downey (Columbia University, New York, NY), and D. E. Lemons. *American Scientist*, vol. 69, Sept.-Oct. 1981, p. 543-550. 44 refs.

Evidence is presented in support of the thesis that although the basic organization of the vertebrate thermostat has evolved over as much as 500 million years, it has served the vertebrate classes in a way that is dependent on two distinct factors: (1) whether the respiratory medium is air or water; and (2) whether the body temperature varies passively with thermal conditions or is maintained at a constant level by the expenditure of stored fluid and energy. Attention is given the behavioral and autonomic responses of water breathers, thermoregulation in such cold-blooded air breathers as reptiles and amphibians, and the human thermoregulatory processes of blood flow variation between hot and cold environments, sweating and shivering, and the thermoregulatory perturbations during menopause called 'hot flashes'. O.C.

**A81-48189** # **Experimental studies on the estimation of the dynamic characteristics of the human operator.** Y. Oka, T. Takeda, and M. Naito. *Hokkaido University, Faculty of Engineering, Bulletin*, July 1981, p. 141-151. 5 refs. In Japanese, with abstract in English.

The dynamic characteristics of human operators are discussed in terms of an autoregression model for several simple manual control systems. The control tasks considered include: pursuit tracking, compensatory tracking, and two-variable compensatory tracking. The dynamic behavior of the human operator is described by a linear model with additional noise representing the nonlinear component. It is shown how this additional noise is whitened by the autoregression model despite the presence of a feedback loop. As a result, the variation of the dynamic characteristics of human operators is represented by discrete pulse sequences. V.L.

**A81-48225** **Efficiency of human visual signal discrimination.** A. E. Burgess (British Columbia, University, Vancouver, Canada), R. F. Wagner, R. J. Jennings (U.S. Food and Drug Administration, Bureau of Radiological Health, Rockville, MD), and H. B. Barlow (Cambridge University, Cambridge, England). *Science*, vol. 214, Oct. 2, 1981, p. 93, 94. 13 refs.

The overall statistical efficiency of human subjects discriminating the amplitude of visual pattern signals added to noisy backgrounds is measured. By changing the noise amplitude, the amount of intrinsic noise can be estimated and allowed for. For a target containing a few cycles of a spatial sinusoid of about 5 cycles per degree, the overall statistical efficiency is as high as 0.7 + or - 0.07, and after correction for intrinsic noise, efficiency reaches 0.83 + or - 0.15. Such a high figure leaves little room for residual inefficiencies in the neural mechanisms that handle these patterns. (Author)

**A81-48360** **Analytic derivation of training transfer effectiveness ratios /TERs/ for new training systems.** W. V. Hagin (Seville Research Corp., Tempe, AZ). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 375, 376. 8 refs.

The task cue-commonality analysis of Caro (1970) is used to derive TER's for Navy's new Undergraduate Jet Pilot Training System. The approach involves identification of the cues required to perform a given task in the aircraft and an analytical evaluation of the degree to which that cue is provided in the simulator. The cue-commonality approach to TER generation offers a practical solution to the problem of providing the training system designer with training effectiveness estimates. V.L.

**A81-48361** * **Development of a multi-media crew-training program for the Terminal Configured Vehicle Mission Simulator.** J. A. Houck and A. T. Markos (NASA, Langley Research Center, Hampton, VA). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 377-382. 6 refs.

This paper describes the work being done at the National Aeronautics and Space Administration's (NASA) Langley Research Center on the development of a multi-media crew-training program for the Terminal Configured Vehicle (TCV) Mission Simulator. Brief descriptions of the goals and objectives of the TCV Program and of the TCV Mission Simulator are presented. A detailed description of the training program is provided along with a description of the performance of the first group of four commercial pilots to be qualified in the TCV Mission Simulator. (Author)

**A81-48362** **Pilot performance as a function of peripheral cues and color in computer generated images.** C. L. Kraft, C. D. Anderson, and C. L. Elworth (Boeing Aerospace Co., Seattle, WA). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 383-388. Contract No. F49620-79-C-0030.

The effects of the visual field size, scene complexity, and color on flight performance has been measured in a flight simulator with a computer generated imagery system. It is found that the size of the field of view is significant in its effects on approach and landing performance in the descending turn and on the straight-in approach. Training with an unrealistically small visual simulation may result in the inculcation of poor flying practices in the student pilot, e.g. too tight turns. Greater detail in the scene and color realism are also found to be an important aid to training. V.L.

**A81-48363** **Computer controlled electronic warfare simulation for tactical operator training.** I. V. Deaton (Singer Co., Link Flight Simulation Div., Silver Spring, MD). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 439-442.

Electronic warfare (EW) plays a key role in modern warfare; operational tactics and EW systems are changed frequently as each side tries to stay a jump ahead of the other side. Proper training of EW operators prior to combat greatly increases the effectiveness of EW combat tactics and also increases the probability of survival of EW operator and platform. This paper describes the role of computer controlled EW simulation to safely train EW system operators in a cost effective manner. A radar warning receiver (RWR) is selected as a typical and important EW system and its simulation is described at the block diagram level. Hardware/software tradeoffs to provide the most effective training while still allowing the training to be quickly adapted to meet the needs of changing operational tactics and equipment are discussed. (Author)

**A81-48374** **Computer-based simulations for man-computer system design.** B. M. Crawford, W. H. Pearson, and R. F. Bachert (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 574-579. 18 refs.

Man-in-the-loop simulations to investigate human factors problems posed by man-computer interactions in proposed weapon system concepts. Two of the system contexts in which computer-based simulations have been used are command-control and digital avionics. Two command-control experiments and one cockpit design experiment will be summarized. Generic principles for user-oriented man-computer system design are also considered. (Author)

**A81-48375** **Real time simulation of OAS Phase I controls and displays.** G. P. Chubb (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH) and S. Beecroft (Systems Research Laboratories, Inc., Dayton, OH). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 580-585. 8 refs.

The experience with the Strategic Avionics Crewstation Design Facility (SACDEF) demonstrates the feasibility of developing substantial in-house Air Force simulations of systems in the development stage. Here, design documentation and concepts for operational utilization receive scrutiny they might not otherwise get. Human engineering consultation furnished to the System Program Office is predicated on an understanding of crew capabilities as well as the mission and equipment. What is more important, human factors considerations are based on empirical studies of workload, and design validation is accomplished by exercising system functions against crewmembers representing the experience levels of the actual user community. **A81-48499** **Development of a search task for the measurement of peripheral visual acuity.** L. J. Bellamy (Birmingham, University, Birmingham, England) and A. J. Courtney (University of Hong Kong, Hong Kong). *Ergonomics*, vol. 24, July 1981, p. 497-509. 29 refs. Science Research Council Grant No. GR/A/9297/9.

Experimental evidence is discussed which indicates a relationship between peripheral visual acuity and search performance. It is suggested that use of this relationship can be made in assessing the relative extent of a person's peripheral visual field (visual lobe) for target detection when visually screening individuals for industrial inspection tasks. A card sorting task involving visual search was developed which was shown to be sensitive to subject differences in search speed. Speed of search correlated significantly with visual lobe area. Subjects' foveal acuities were not significantly related to search time. Test-retest reliability for forms A and B of the card sorting task over a one-week period was r=0.81. (Author)

**A81-48500** **Variations in response to whole-body vibration - Intensity dependent effects.** D. J. Oborne, P. Boarer, and T. O. Heath (Swansea, University College, Swansea, Wales). *Ergonomics*, vol. 24, July 1981, p. 523-530. 19 refs. Research supported by the Social Science Research Council.

The effects of overall vibration intensity on human response to whole-body vibration over a given frequency range are investigated. Equal sensation contours were measured in 24 standing subjects experiencing vibrations at frequencies from 2.5 to 60 Hz at intensities of 0.5, 1.0, 2.0 or 3.5 m/sec per sec rms. The shapes of the contours generated for each of the starting intensities are found to differ significantly, with the contour becoming more quadratic rather than linear in shape as the intensity levels increase. The results support the argument that different frequency weightings should be applied in the assessment of vibration environments with different intensities, however, contradict the contour shapes suggested by the International Standards Organisation (1974). **A81-48725** **Origin of life between Scylla and Charybdis.** U. Niesert, D. Harnasch (Deutsche Forschungsgemeinschaft, Zentrallaboratorium für Mutagenitätsprüfung, Freiburg im Breisgau, West Germany), and C. Bresch (Freiburg, Universität, Freiburg im Breisgau, West Germany). *Journal of Molecular Evolution*, vol. 17, Sept. 1981, p. 348-353. 19 refs. Research supported by the Deutsche Forschungsgemeinschaft.

A package model of the chemical evolution of nucleotides under prebiotic conditions is analyzed with respect to the stability of packages to fluctuations in replication and fission on the one hand, and mutations on the other. In the model, packages are conceived of as small compartments in the primordial broth enclosing a few RNA molecules in varying numbers of copies and a few polypeptides, which occasionally undergo fission with a random distribution of contents to the arising daughter packages. A computer simulation of package viability as a function of parameters including the number of participating genes, and the number of replicated molecules between two package fissions is presented which was performed for probable values of the lethal and parasitic mutation rates and the accident rate. It is shown that the origin of life must have involved no more than three genes, with between 20 and 80 RNA molecules on the average replicating between each fission. A.L.W.

**A81-48869** **Space settlements - The medical perspective.** E. T. Paterson (Medical Clinic, Creston, British Columbia, Canada). *British Interplanetary Society, Journal (Space Chronicle)*, vol. 34, Oct. 1981, p. 429-434.

Following an examination of the physiological responses to weightlessness, the likely implications are considered from the point of view of many major diseases. Cardiac, respiratory, neurological, musculoskeletal, renal, reproductive, digestive, psychiatric and infectious diseases are shown to be probably strongly influenced by low, or zero, gravity. Some implications for rehabilitation are also discussed. It is concluded that major health benefits may be realized from the migration into space. (Author)

**A81-49327** **Characterization of left ventricular mechanical function during arrhythmias with two dimensional echocardiography. I - Premature ventricular contractions.** T. Uchiyama, E. Corday, S. Meerbaum, T.-W. Lang, P. Guerret, M. Povzhitkov, and T. Peter (Cedars-Sinai Medical Center; California, University, Los Angeles, CA). *American Journal of Cardiology*, vol. 48, Oct. 1981, p. 679-689. 30 refs. Research supported by the Ahmanson Foundation, Keck Foundation, Lillian D. Truyens Foundation, and Jules Stein Foundation; Grants No. NIH-HL-17651-06; No. NIH-HL-17651-07; No. NIH-HL-14644-07.

The technique of two-dimensional echocardiography is applied to the investigation of contractile patterns of the left ventricle during cardiac arrhythmias in the closed-chest dog. Echocardiographic short- and long-axis tomographic images were obtained for seven anesthetized dogs undergoing single premature ventricular contractions induced through threshold stimulation at the apex. The cross-sectional short-axis views revealed that, compared with contraction patterns during normal sinus rhythm, premature ventricular contractions with a short coupling interval were associated with minimal differences between end-diastolic and end-systolic areas as well as distorted regional contraction, while the subsequent postextrasystolic contraction showed a pronounced reduction in end-systolic area and increase in end-diastolic area. In contrast, premature beats with relatively long coupling intervals lead to less reduction in contraction and only minor postextrasystolic potentiation. The long-axis views revealed normal contraction patterns aside from regional systolic outward bulging in the apical region for long coupling intervals, with short coupling intervals associated with a generalized derangement of ventricular wall motion during systole. It is concluded that two-dimensional echocardiography can be used to characterize both global and region left ventricular function during cardiac rhythm disturbances. A.L.W.

**A81-49328** **Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning.** G. Maurer and N. C. Nanda (Rochester, University, Rochester, NY). *American Journal of Cardiology*, vol. 48, Oct. 1981, p. 720-727. 33 refs.

The paper presents a study of the use of two-dimensional echocardiography for the prospective evaluation of ventricular asynergy immediately after treadmill stress testing and the correlation of echocardiographic findings with thallium perfusion scans. Echocardiography was performed in the left decubitus position before and immediately after graded treadmill exercise in 41 patients who subsequently underwent cardiac catheterization for suspected coronary artery disease. Exercise-induced wall motion abnormalities were detected in 19 of the 23 patients with significant coronary artery disease and no prior history of myocardial infarction, and in all five of the patients with known previous infarction. Exercise-induced myocardial perfusion defects were found to be well correlated with exercise-induced asynergy detected by echocardiography. It is concluded that two-dimensional echocardiography performed immediately after treadmill exercise is a valuable technique in the assessment of both left and right ventricular wall motion abnormalities, with results comparable with those of thallium scanning in the evaluation of coronary artery disease. A.L.W.

**A81-49474** # **The pharmocological analysis of the stress mechanism and its consequences (Farmakologicheskii analiz mekhanizka stressa i ego posledstvii).** I. S. Zavodskaia and E. V. Moreva (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). Leningrad, Izdatel'stvo Meditsina, 1981. 216 p. 245 refs. In Russian.

The pharmocological aspects of neurogenic damage to the internal organs under conditions of extreme nervous system stimulation are examined. Results are presented of observations on the intracellular, cellular, organ and system levels of damage to the digestive system, cardiovascular system, liver, and lungs induced by excessive nervous stimulation in experimental and clinical situations. The applicability of various pharmacological preparations of these conditions is considered, with particular attention given to the neurotropic substances. A.L.W.

**A81-49673** **Cues reduce direction uncertainty and enhance motion detection.** K. Ball and R. Sekuler (Northwestern University, Evanston, IL). *Perception and Psychophysics*, vol. 30, no. 2, Aug. 1981, p. 119-128. 13 refs. Grant No. AF-AFOSR-79-0064.

Previous work has shown that detectability of motion is better when the observer knows ahead of time the direction of that motion (certainty) than when he does not know the direction (uncertainty). Attempts to reduce this performance decrement associated with direction uncertainty are now reported. In these experiments, a briefly flashed, oriented line cued the observer to the direction of motion that might occur. When the cue appeared before the moving target, detectability increased; when the cue appeared after the moving target, performance dropped below that for no cue at all. In addition, the effect of cue reliability was examined by varying the relation between cue orientation and actual direction of target motion. The more accurate the cue is, the larger the performance increment. When the cue indicated a direction more than 90 deg from the actual target direction, performance was worse than when there was no cue. Results are discussed with regard to the feasibility of reducing uncertainty in real-world situations. (Author)

**A81-49885** **Systems engineering models of human-machine interaction.** W. B. Rouse (Illinois, University, Urbana, IL). New York and Amsterdam, North Holland (North Holland Series in System Science and Engineering. Volume 6), 1980. 162 p. 150 refs. $29.95.

The book treats various types of mathematical models allowing the prediction of human-machine system performances. Methodologies and applications in such fields as aircraft piloting, air traffic control, industrial process monitoring and control, failure detection and diagnosis and text editing are examined for the modeling approaches of estimation theory, control theory, queueing theory and fuzzy set theory. Consideration is also given to the less widely applicable rule-based production system models, pattern recognition concepts and Markov chain models. A.L.W.

**A81-49917** **Geomagnetic field - Its role in the evolution of life and intelligence on earth.** U. R. Rao (Indian Space Research Organization, Satellite Centre, Bangalore, India). *British Interplanetary Society, Journal (Interstellar Studies)*, vol. 34, Nov. 1981, p. 459-465. 35 refs. Research supported by the Department of Space and Space Commission.

The hypothesis that the fundamental cause responsible for the formation of the ozone layer on earth is the dipole magnetic field of the earth is elaborated on and supportive quantitative estimates are presented to show that the magnetic property of the earth is responsible for the sustenance of a steady ozone blanket in the earth's atmosphere, which in turn has been the major factor in the evolution of life with an oxygen metabolism. The effects of the ozone layer on the development of the earth's climate are discussed, and it is concluded that if the earth were devoid of the ozone layer, its overall surface temperature would have become as low as 1.5 K, the correlation between glacial changes and solar activity confirming this hypothesis. The constraint of the necessity of having a magnetic field for the evolution of life with an oxygen metabolism and intelligence is taken into consideration, and it is proposed that Drake's equation, which governs the calculation of the probability for finding intelligence elsewhere in the Universe, is reduced by about a factor of 10. K.S.

**A81-49918** **Medical considerations for manned interstellar flight.** J. R. Murphy. *British Interplanetary Society, Journal (Interstellar Studies)*, vol. 34, Nov. 1981, p. 466-476. 60 refs.

Medical effects of prolonged space flight, with respect to interstellar flight, are reviewed, dividing the discussion into two broad categories, i.e., the effects of weightlessness and those of spacecraft and space environments. Topics included in the first category of effects are: musculo-skeletal deconditioning and cardiovascular deconditioning. The second category includes the following topics: (1) effects, prevention, and treatment of human exposure to radiation in space (with attention given to sources of radiation, methods of shielding, and pharmacological methods of radiation-protection), and (2) factors increasing crew members' susceptibility to infection (with attention given to microbial contamination of the spacecraft, decreased resistance of the crew to infection, and increased microorganism mutation rate). Other topics discussed are: disturbances of biorhythms, sensory disturbances, effects of linear and radial accelerations, and psychological and social effects of space flight. It is concluded that present knowledge of the effects of space flight on man confirms the feasibility of interstellar flight, but further investigation in earth orbit ground studies are necessary. K.S.

**A81-49951** # **A histopathological study of coronary arteries in aircrew fatalities during 1962-1978.** S. K. Adaval (Indian Air Force, Institute of Aviation Medicine, Bangalore, India), R. N. Diwan (Air Force Central Medical Establishment, New Delhi, India), R. N. Verma (Armed Forces Medical College, Poone, India), and G. N. Kunzru. *Aviation Medicine*, vol. 25, June 1981, p. 1-6. 36 refs.

The incidence of coronary artery disease in aircrew members is evaluated on the basis of a histopathological study of accident fatalities in the period 1962-1978. Coronary artery slides available for 174 aircrew autopsies were examined and compared with those taken from 105 autopsies performed on nonaircrew personnel of the same age groups who had died with no evidence of atherosclerotic conditions. Microscopic disease is found in 29.3% of the aviators, aged 20-39, and 14.3% of the control group, with the incidence of the disease increasing with subject age and accumulated flight hours. A greater incidence is observed in supersonic and transonic pilots despite their lower average age than helicopter and transport pilots, which finding is attributed to the stress factors inherent in high-speed aviation. Of the three cases of aircrew with severe atherosclerotic conditions, only one is found to be possibly related to the accident. A.L.W.

**A81-49952** # **Graduated dynamic end point system 'GRADEPS' for assessment of visual field contraction during +Gz acceleration.** B. R. S. Reddy, K. Rai, V. K. Gupta (Indian Air Force, Institute of Aviation Medicine, Bangalore, India), and A. K. Ali (Iraqi Air Force, Baghdad, Iraq). *Aviation Medicine*, vol. 25, June 1981, p. 7-10.

A dynamic system with multiple lights for presenting visual stimuli at graduated angles and for measuring subject response has been developed and incorporated into a human centrifuge as a convenient means of determining subject tolerances to +Gz acceleration as indicated by peripheral light loss. GRADEPS consists of eight LEDs mounted symmetrically in pairs subtending angles of 64, 60, 56 and 52 deg at eye level and connected so that only one pair is operative at a time. Light stimuli are presented at random intervals starting with the pair at 64 deg and switching to the next pair only when the subject fails to respond to the signal by pressing a microswitch. The system has been designed using TTL integrated circuits for the controlled clock, sequence generator, LED drivers' stimulus repetition control, discretizer and random switching circuit components. GRADEPS has been used to establish g thresholds at onset rates of 0.1 to 0.5 g/sec in over 100 subjects, with improved accuracy relative to conventional single-stimulus methods. A.L.W.

**A81-49953** # **Backache in helicopter pilots.** H. Malik and R. R. Kapur (Indian Air Force, Aero-Medical Training Centre, Hindan, India). *Aviation Medicine*, vol. 25, June 1981, p. 11-15. 8 refs.

Long term flying in helicopters currently in use produces backache. Attempts have been made to analyze the problem with special emphasis on helicopter seat design. Suitable human engineering aspects in terms of seat and relocation of controls have been recommended. Regular spinal exercises by aircrew have been advised. (Author)

**A81-49954** # **Aeromedical evaluation of aircrew with lower limb disabilities.** R. Singh (Indian Air Force, Institute of Aviation Medicine, Bangalore, India). *Aviation Medicine*, vol. 25, June 1981, p. 16-20. 7 refs.

The aeromedical evaluation of pilot fitness following recovery from injuries resulting in surgical or orthopedic disabilities to the lower limbs is discussed. It is noted that while a clinical assessment based on laboratory and radiological tests may be used to determine fitness to resume duties with or without restrictions, a human engineering assessment is required to indicate accurately how a particular disability will affect aircrew performance under changing leg geometries and flight profiles. The human engineering assessment includes anthropometric measurements to assess leg shortening and joint movements, cockpit trials of rudder pedal control operation, and trials in a simulated cockpit environment with a rudder pedal assembly at force maxima likely to be encountered in an emergency situation. Recommendations concerning means to improve the instrumentation, applications and usefulness of the present method of aeromedical evaluation are presented. A.L.W.

**A81-49955 # Study of apexphonocardiogram and carotid pulsation during short term hypoxia in a decompression chamber.** P. Tyagi (Indian Air Force, New Delhi, India). *Aviation Medicine,* vol. 25, June 1981, p. 21-26. 9 refs.

Cardiac responses to short-term hypoxia at a simulated altitude of 15,000 ft are studied by the simultaneous recording of electrocardiograms, phonocardiograms and external carotid pulse activity. Systolic time intervals were determined by the three methods and blood pressure was monitored in seven healthy, normal male subjects exposed to ground-level conditions and 45 min of simulated high-altitude hypoxia in a decompression chamber. A rise in heart rate and decline in left ventricular ejection time (LVET) are noted immediately upon ascent to 15,000 ft, with the heart rate decreasing somewhat and the ratio of pre-ejection period (PEP) to LVET increasing after 30 min. A subsequent rise in heart rate and decrease in PEP/LVET ratio suggest a cyclic pattern in these parameters. A decrease in heart rate accompanied by an increase in PEP and the PEP/LVET ratio are observed immediately upon return to ground level, with baseline values regained after an additional 15 min. Further studies are recommended to establish the range of normal responses for the evaluation of borderline ECG abnormalities. A.L.W.

**A81-49956 # Cardiac arrhythmias in service personnel - An electrophysiologic evaluation.** M. Durairaj (Military Hospital, Poona, India), G. R. Narayanan (Command Hospital, Poona, India), G. Kuppuswamy (Armed Forces Medical College, Poona, India), and H. L. Kher. *Aviation Medicine,* vol. 25, June 1981, p. 27-30.

Experience with the electrophysiological evaluation of military personnel with cardiac arrhythmias using the electrode catheter technique is presented. His bundle electrograms and atrial pacing were performed in 50 subjects including 14 normal controls and 36 subjects with various types of cardiac arrhythmias. In the 15 patients with sick sinus syndrome, intracardial electrocardiography revealed corrected sinus node recovery times of above 600 msec in all cases and associated A-V node disease manifested by a prolonged A-H interval in four patients. Very short resting H-V intervals were observed in the eight cases of WPW syndrome. The electrophysiological studies revealed complete heart block in two subjects with A-V block, indicating the need for permanent pacemaker therapy. His bundle and atrial tachypacing did not show any H-V prolongation in three cases of right bundle branch block with left axis deviation, indicating that pacing could be avoided. The correct diagnosis of supraventricular ectopics with wide QRS complex was also made. Results demonstrate the usefulness of electrophysiological studies in the diagnosis of conditions which may not be distinguishable by surface electrocardiography. A.L.W.

**A81-49957 # Physiological aspects of heat exposure as applied to flying.** M. L. Wadhawan. *(Aero Medical Society of India, Symposium on Heat Stress in Aviation, Bangalore, India, Nov. 27, 28, 1980.) Aviation Medicine,* vol. 25, June 1981, p. 34, 35.

Physiological responses to heat stress as encountered in an aircraft cockpit during low-level high-speed flight at high ambient temperatures are discussed. Human thermoregulatory pathways are considered, with attention given to the cooling mechanisms of cutaneous vasodilation, circulating blood volume increase, perspiration, respiratory heat exchange and radiation, and the accompanying stresses on the cardiovascular and circulatory systems. It is noted that aircrew performance will start to deteriorate long before physiological tolerance is reached. Mechanisms of heat acclimatization are also considered. A.L.W.

**A81-49958 # Effects of thermal stress on psychological functions and performance.** J. M. Wadhawan (Indian Air Force, Institute of Aviation Medicine, Bangalore, India). *(Aero Medical Society of India, Symposium on Heat Stress in Aviation, Bangalore, India, Nov. 27, 28, 1980.) Aviation Medicine,* vol. 25, June 1981, p. 36-38.

The effects of thermal stresses as encountered in the fighter cockpit environment during a tropical summer on human psychomotor performance are considered. Possible mechanisms through which heat stress might act to affect human performance are indicated, including a rise in internal temperature increasing the rate of neural activity, and experiments with a liquid-cooled suit demonstrating the role of core temperature in determining performance speed and the role of skin temperature in determining error rate are presented. Factors which influence the level of thermal stress are pointed out, including the relative intensity of the stress, its rate of application, duration, the presence of other stresses and subject physical, mental and emotional condition. The results of experiments on temperature intervals for the response of neural activity rate, reaction time, vigilance and monitoring performance, tracking and cognitive functions to elevations in body temperature are then presented. It is concluded that although it is not necessary to eliminate completely heat-induced psychophysiological strain, cooling measures should be undertaken to limit internal heat storage to acceptable levels. A.L.W.

**A81-49959 # Evaluation of thermal strain index for assessment of tolerance to heat stress.** K. C. Sinha (Defence Institute of Physiology and Allied Sciences, Delhi, India). *(Aero Medical Society of India, Symposium on Heat Stress in Aviation, Bangalore, India, Nov. 27, 28, 1980.) Aviation Medicine,* vol. 25, June 1981, p. 39-42.

The development of various thermal strain indexes for the determination of human heat tolerances is examined. Direct and indirect approaches to the measurement of thermal strain as the degree of heat accumulation or loss are indicated, and the various heat strain indexes are presented, including the actual heat content, sweating rate, heart rate, mean skin temperature and oral temperature. It is pointed out that the point of convergence of mean skin temperature with oral temperature correlates very well (correlation coefficient 0.86) with tolerance time as indicated by subjective feelings and the onset of heat collapse, whereas the other known strain indices correlate less well (correlation coefficient 0.5). A.L.W.

**A81-49960 # Microenvironmental protection in military flying.** C. A. Verghese (Indian Air Force, Institute of Aviation Medicine, Bangalore, India). *(Aero Medical Society of India, Symposium on Heat Stress in Aviation, Bangalore, India, Nov. 27, 28, 1980.) Aviation Medicine,* vol. 25, June 1981, p. 43-45.

Means for the prevention of pilot performance degradation due to excessive thermal stresses encountered during low-altitude flight during the summer months at tropical locations are considered with particular attention given to a liquid-cooled suit. Possible measures to be taken to avoid heat accumulation totalling more than 100 Kcal during flight include body cooling in a cold environment and cooling by an air-ventilated suit prior to encountering thermal stresses, and short-burst cooling by dry oxygen with an air-ventilated suit during thermal stresses. The liquid-cooled suit considered has a cooling capacity of 200 Kcal and has been shown to allow only marginal heart rate changes and heat accumulation in one hour of heat exposure at 50 C DB. The refrigeration system developed for in-flight use incorporates a fiberglass container for survival aids, refrigerant ice pack, quick-release connectors and liquid circulation pump and has been found compatible with ejection procedures. A.L.W.

**A81-49961 # Field studies of heat stress in fighter operations in Assam Valley.** V. K. Gupta (Indian Air Force, Institute of Aviation Medicine, Bangalore, India). *(Aero Medical Society of India, Symposium on Heat Stress in Aviation, Bangalore, India, Nov. 27, 28, 1980.) Aviation Medicine,* vol. 25, June 1981, p. 46-48.

Results are presented of a study of thermal stresses in aircrews engaged in fighter operations under the high temperatures and high humidity conditions of the Assam Valley of India. Environmental temperatures and physiological parameters were recorded during low-level strike, medium altitude and high altitude flight profiles flown in a supersonic fighter trainer aircraft with a turbocooler system for cabin atmosphere control. In the low-level sorties, cockpit temperature was observed to rise by 3-5 C in the 15 min between cockpit entrance and takeoff, decrease by the same amount 5 min after takeoff, and increase progressively thereafter in the in-flight and post-landing phases, accompanied by subjective feelings of discomfort and sweat loss. Significant heat accumulation or sweat loss was not found in the medium- or high-altitude flights. Results point up the potential dangers of consecutive low-level missions in high-temperature, high-humidity ambient environments, especially in the absence of air-conditioned crew rooms for pilot recovery. A.L.W.

A81-49962

**A81-49962 # Thermal stress in high speed low level flying.** B. Singh (Indian Air Force, New Delhi, India). *(Aero Medical Society of India, Symposium on Heat Stress in Aviation, Bangalore, India, Nov. 27, 28, 1980.) Aviation Medicine*, vol. 25, June 1981, p. 49, 50.

The problem of thermal stress in high-speed, low-level flight at high ambient temperatures is discussed in light of studies carried out on supersonic flight in northwest India and in Sardinia. The studies involved the measurement of cockpit air temperatures and aircrew sweat losses during the pre-flight and in-flight portions of 35-40 min sorties undertaken in fighter aircraft in the summer and winter. Results demonstrate the severity of the aircraft thermal environment in the summer even when compared to laboratory observations at higher temperatures and even in the comparatively mild summers of southern Europe. Relations between pilot mean body temperature, and cockpit temperature, cockpit temperature and sortie time, and pilot mean body temperature and sortie time are presented which allow the prediction of pilot mean body temperature during a sortie at various cockpit temperatures. It is pointed out that the only promising way of achieving a satisfactory thermal environment is by the creation of a microenvironment around the pilot by the use of a liquid-cooled suit. A.L.W.

# STAR ENTRIES

**N81-32570*#** California Univ. at Santa Barbara. Dept. of Geography.
**CREATION OF LEARNING KITS**
Douglas A. Stow, John E. Estes, and Frederick C. Mertz *In* NASA. Ames Research Center Field Study for Remote Sensing 1981 p 35-43
Avail: NTIS HC A05/MF A01 CSCL 05I

A learning kit is an essential part of any remote sensing workshop, course, or in-house training program to provide the 'hands-on' experience of working with remotely sensed imagery. This is the objective of laboratory and field exercises as well as the reason behind the production of imagery/map kits. The way in which these learning kits (containing conventional remotely sensed and collateral data products) are put together is described and some concerns that influence the creation of learning kits are discussed. These include budgetary constraints, number of imagery types, and number of collateral data types. A.R.H.

**TEACHING/LEARNING PRINCIPLES**
Donna B. Hankins and William H. Wake *In* NASA. Ames Research Center Field Study for Remote Sensing 1981 p 61-68

Avail: NTIS HC A05/MF A01 CSCL 05I

The potential remote sensing user community is enormous, and the teaching and training tasks are even larger; however, some underlying principles may be synthesized and applied at all levels from elementary school children to sophisticated and knowledgeable adults. The basic rules applying to each of the six major elements of any training course and the underlying principle involved in each rule are summarized. The six identified major elements are: (1) field sites for problems and practice; (2) lectures and inside study; (3) learning materials and resources (the kit); (4) the field experience; (5) laboratory sessions; and (6) testing and evaluation. The centrifuge comprises a generally circular, rotatably mounted frame carrying a plurality of removable and replaceable cages for the animal specimens. Pairs of opposing cages may be removed from the frame while it is rotating by means of a cage exchanger which rotates concentrically within the centrifuge and the speed of which is controlled independently of the frame speed. An image rotator is provided for selective observation of the rotating animals. The system further includes a waste conveyor system, a food supply system, and a water supply system for each cage for creating a life sustaining environment so that the animals can live in the rotating centrifuge for extended periods.

Tigranyan (Inst. of Medical and Biological Problems, Moscow), and E. G. Vetrova (Inst. of Medical and Biological Problems, Moscow) *In its* US Rat Expts. Flown on the Soviet Satellite Cosmos 1129 Aug. 1981 p 35-100 refs

Avail: NTIS HC A19/MF A01 CSCL 06C

The effects of space flight on the activities of 26 enzymes concerned with carbohydrate and lipid metabolism in hepatic tissue taken from male Wistar rats are investigated. These activities were measured in the various hepatic cell compartments, i.e., cytosol, mitochondria and microsomes. In addition, the levels of glycogen, total lipids, phospholipids, triglycerides, cholesterol, cholesterol esters, and the fatty acid composition of the rat livers were also examined and quantified. A similar group of ground-based rats treated in an identical manner served as controls. Both flight and synchronous control rats were sacrificed at three time intervals: R+0, 7-11 hours after recovery; R+6, after 6 days; R+6(S), after 6 days (having undergone 2-5 hour periods of fixed stress in a 'backupward' position on days 0, 3, 4, 5 and 6) and R+29, after 29 days post-flight. Although most of the enzyme activities and the amounts of liver constituents studied were unaffected by the period of weightlessness, some significant differences were observed. J.D.H.

Avail: NTIS HC A19/MF A01 CSCL 06C

The skeletal alterations induced by space flight were determined to be a reduced rate of periosteal bone formation in tibial and humeral diaphyses, a decreased trabecular bone volume, and an increased fat content of the bone marrow in the proximal tibial metaphysis. An increased incidence of arrest lines in flight animals suggested that periosteal bone formation may have ceased during space flight. Endosteal bone resorption was not affected markedly. Author

W. Eugene Roberts (Univ. of the Pacific, San Francisco), Peter G. Mozsary (Univ. of The Pacific, San Francisco), and Emily Morey-Holton *In its* US Rat Expts. Flown on the Soviet Satellite Cosmos 1129 Aug. 1981 p 127-148 refs

Avail: NTIS HC A19/MF A01 CSCL 06C

The morphometric analysis of periodontal ligament (PDL), the osteogenic interface between tooth and bone, is described. Immediately post-flight, PDL width and total cell number wer decreased. Frequency distributions of nuclear volume revealed that presumptive preosteoblasts were particularly depressed. Depleted numbers of preosteoblasts may be an important factor in the mechanism of inhibited bone formation during weightlessness. J.D.H.

Webster S. S. Jee, D. B. Kimmel, C. Smith, and R. B. Dell *In* NASA. Ames Research Center US Rat Expts. Flown on the Soviet Satellite Cosmos 1129 Aug. 1981 p 149-175 refs

Avail: NTIS HC A19/MF A01 CSCL 06C

The proximal humeral metaphysis of rats from time periods recovery plus zero days (R+0), recovery plus six days (R+6), and recovery plus twenty nine days (R+29) was analyzed. The volume of calcified cartilage and bone in flight and synchronous controls was reduced in groups R+0 and R+6, but was normal in group R+29. The number of functional bone cells (osteoblasts and osteoclasts) was decreased in proportion to the amout of bone in the early groups, and was normal in the last group. The fatty marrow volume was increased only in flight animals of groups R+0 and R+6, but was normal in the R+29 group. Accumulation of excess fatty marrow was seen only in flight animals. The decreased amount of bone and calcified cartilage is believed to be the result of a temporarily slowed or arrested production of calcified cartilage as a substrate for bone formation. This would have resulted from slowed bone elongation during flight and synchronous control conditions. Bone elongation returned to normal by twenty nine days after return. Author

**EXPERIMENT K305: QUANTITATIVE ANALYSIS OF SELECTED BONE PARAMETERS. SUPPLEMENT 3A: TRABECULAR SPACING AND ORIENTATION IN THE LONG BONES Final Report**

M. M. Judy *In* NASA. Ames Research Center US Rat Expts. Flown on the Soviet Satellite Cosmos 1129 Aug. 1981 p 177-198 refs

Avail: NTIS HC A19/MF A01 CSCL 06C

Values of mean trabecular spacing computed from optical diffraction patterns of 1:1 X-ray micrographs of tibial metaphysis and those obtained by standard image digitization techniques show excellent agreement. Upper limits on values of mean trabecular orientation deduced from diffraction patterns and the images are also in excellent agreement. Values of the ratio of mean trabecular spatial density in a region of 300 micrometers distal to the downwardly directed convexity in the cartilage growth plate to the value adjacent to the plate determined for flight animals sacrificed at recovery were significantly smaller than values for vivarium control animals. No significant differences were found in proximal regions. No significant differences in mean trabecular orientation were detected. Decreased values of trabecular spatial density and of both obsteoblastic activity and trabecular cross-sectional area noted in collateral researches suggest decreased modeling activity under weightlessness. Avail: NTIS HC A19/MF A01 CSCL 06C

The effects of space flight on vertebral body bone strength excised were investigated. Comparative biomechanical investigations of vertebral body strength for flight, synchronous, and vivarium rats following spacecraft recovery (R+0), at R+6 and R+29 days post flight recovery are presented. Statistical analyses are presented for the mechanical properties of stiffness, ultimate load, displacement to ultimate load, and energy to ultimate load. At R+0 all of the above properties show that the vertebral body exhibits an increasing susceptibility to fracture. The reduction of bone strength is inhomogeneous and dependent on vertebral level. The R+6 recovery data was inconclusive since it varied above and below the R+0 data. At R+29 ultimate load values showed a statistically significant increase in bone strength approaching that of the vivarium or control group. J.D.H.

**EXPERIMENT K-308: AUTOMATIC ANALYSIS OF MUSCLE FIBERS FROM RATS SUBJECTED TO SPACEFLIGHT Final Report**

Kenneth R. Castleman (Jet Propulsion Lab., Pasadena, Calif.), Luis A. Chui (Univ. of Southern California, Los Angeles), and Joseph P. VanDerMeullen *In* NASA. Ames Research Center US Rat Expts. Flown in the Soviet Satellite Cosmos 1129 Aug. 1981 p 267-278 refs

Avail: NTIS HC A19/MF A01 CSCL 06C

The morphology of histochemically prepared muscle sections from the gastrocnemius and planiaris muscles of flight and vivarium control rats was studied quantitatiely. Both fast-twitch and slow-twitch fibers were significantly smaller in flight groups than in control groups. Fibers in group 4F were somewhat larger than in 1F, presumably due to growth after recovery. Fibers in 4V were slightly larger than in 1V, presumably due to age. The slow fibers showed more spaceflight induced size loss than fast fibers, suggesting they suffered more from hypogravity. The proportion of slow fibers was also lower in the flight groups, suggesting spaceflight induced fiber type conversion from slow to fast. Author

**EXPERIMENT K-310: THE EFFECT OF SPACEFLIGHT ON OSTEOGENESIS AND DENTINOGENESIS IN THE MANDIBLES OF RATS Final Report**

David J. Simmons, Jean E. Russell, Frank Winter, Gary D. Rosenberg (Indiana Univ.), and William V. Walker *In* NASA. Ames Research Center US Rat Expts. Flown in the Soviet Satellite Cosmos 1129 Aug. 1981 p 279-306 refs

Avail: NTIS HC A19/MF A01 CSCL 06C

Normal rates of dentinogenesis and osteogenesis in the body of the mandible were observed. The total calcium, inorganic phosphorus and hydroxyproline levels in the jaws and incisors of the flight rats were normal. Gravity density fractionation studies suggested, however, that spaceflight caused a delay in the normal maturation of bone mineral and matrix; normal values were reestablished by 6 days postflight. The teeth were spared. The circadian and ultradian patterns of dentin calcification were normal during spaceflight and recovery periods, but the enamel rhythms displayed a greater amplitude of slfur concentrations and this abnormal calcium to sulfur ratios only during exposure to zero gravity. The rat mandible and teeth do not suffer the deficits of bone formation common to weight bearing parts of the skeleton during spaceflight. The only derangements detected were in the quality of the matrix and mineral moieties. J.D.H.

**EXPERIMENT K-310: THE EFFECT OF SPACE FLIGHT ON OSTENOGENESIS AND DENTINOGENESIS IN THE MANDIBLE OF RATS. SUPPLEMENT 1: THE EFFECTS OF SPACE FLIGHT ON ALVEOLAR BONE MODELING AND REMODELING IN THE RAT MANDIBLE Final Report**
P. Tran Van, A. Vignery, and R. Bacon *In* NASA. Ames Research Center US Rat Expts. flown in the Soviet Satellite Cosmos 1129 Aug. 1981 p 307-324 refs

Avail: NTIS HC A19/MF A01 CSCL 06C

The histomorphometric study of alveolar bone, a non-weight-bearing bone submitted mainly to the mechanical stimulations of mastication, showed that space flight decreases the remodeling activity but does not induce a negative balance between resorption and formation. The most dramatic effect of space flight has been observed along the periosteal surface, and especially in areas not covered with masticatory muscles, where bone formation almost stopped completely during the flight period. This bone, having been submitted to the same mechanical forces in the flight animals and the controls, leads to the conclusion that factors other than mechanical loading might be involved in the decreased bone formation during flight. Avail: NTIS HC A19/MF A01 CSCL 06C

The potential effects of spaceflight on the processes of mammalian fertilization, implantation and embryonic development are investigated. Five female and two male rats were placed together on Day 2 of the flight. By R+17, it was determined that both flight and synchronous females were not carrying normal pregnancies and three of the flight animals were laparotomized. The uterus and ovaries were processed for microscopic analyses. The two remaining flight females were allowed to recover from the exploratory operation, rebred with flight males and delivered normal litters. As a control for potential transplacental effects that might be interpreted as direct spaceflight effects, a series of fertilized Japanese quail (Coturnix japonica) eggs was flown on Cosmos 1129. Although all of the eggs were adversely impacted by an inflight failure of the incubator humidifier on flight Day 13, several embryos were able to progress to a development stage equivalent to that of a control 10-12 Day embryo. The posterior regions of the olfactory nasal mucosa of rats flown on Cosmos 1129 failed to reveal histopathological changes. These results are at variance with those of the Apollo 12 Biocore experiment in which severe necrotic olfactory mucosal lesions were seen in flight animals only. In the anterior aspect of the nasal cavity of the Cosmos 1129 rats, however, focal lesions of moderate severity, and variable extent were seen. These were consistent in character with that of a mild virus infection, which, it is postulated, was self-limiting. The infection was present in all groups of animals: flight, synchronous and vivarium control. Author

**EXPERIMENT K-317: BONE RESORPTION IN RATS DURING SPACEFLIGHT Final Report**
Christopher E. Cann (California Univ., San Francisco) and Richard R. Adachi *In its* US Rats Expts. Flown in the Soviet Satellite Cosmos 1129 Aug. 1981 p 427-438 refs

Avail: NTIS HC A19/MF A01 CSCL 06C

Direct measurement of bone resorption in flight and synchronous control rats is described. Continuous tracer administration techniques were used, with replacement of dietary calcium with isotopically enriched Ca40 and measurement by neutron activation analysis of the Ca48 released by the skeleton. There is no large change in bone resorption in rats. Based on the time course of changes, the measured 20-25% decrease in resorption is probably secondary to a decrease in total body calcium turnover. The excretion of sodium, potassium and zinc all increase during flight, sodium and potassium to a level 4-5 times control values. J.D.H.

**SPACECRAFT AND STELLAR OCCULTATIONS BY TURBULENT PLANETARY ATMOSPHERES. A THEORETICAL INVESTIGATION OF VARIOUS WAVE PROPAGATION EFFECTS AND THEIR IMPACT ON DERIVED PROFILES OF REFRACTIVITY, TEMPERATURE AND PRESSURE**
Bjarne Sigurd Haugstad 8 May 1981 75 p refs
(AD-A103069; NDRE/PUBL-81/1002; ISSN-0085-4301) Avail: NTIS HC A04/MF A01 CSCL 03/2

The long propagation paths involved in radio and stellar occultations by turbulent planetary atmospheres require that the classical, weak scattering scintillation theory be expanded to account for the inhomogeneous ambient atmosphere upon which the turbulence is superimposed. Such coupling between the turbulent and the ambient components of refractivity reduces the scintillation index by less than a factor of two in shallow radio occultations. For stellar occultations the reduction varies between this value for very small projected stellar radii, to approximately a factor of 3.6 when the projected stellar radius above the planetary limb greatly exceeds the radius of the free-space Fresnel zone at this distance. More profound changes are found in the scintillation power spectrum, the shape of which depends strongly on both occultation depth and geometry when coupling to the inhomogeneous background is properly accounted for. Second-order, systematic propagation effects calculated from both geometrical optics and a wave-optical formulation show that the average phase velocity is increased in the presence of turbulence. The finite wavelength dependence of the phase path bias implies that an initially non-dispersive medium becomes slightly dispersive by the addition of turbulence. Atmospheric profiles derived from occultations by turbulent planetary atmospheres differ only slightly from those of the corresponding non-turbulent atmosphere when the week scattering condition is satisfied. GRA

**THEORETICAL AND OBSERVATIONAL ANALYSIS OF INDIVIDUAL IONIZING PARTICLE EFFECTS IN BIOLOGICAL TISSUE**

Alan Caril Nelson Nov. 1980 164 p refs
(Contract W-7405-eng-48)
(LBL-11147-Rev) Avail: NTIS HC A08/MF A01

The microstructural damage to living tissue caused by heavy ion radiation was investigated. The corneal tissue of the living rat was exposed to various charged particle beams at different energies. X-rays were used on corneas to compare with the heavy ion irradiated corneas. The samples were subjected to graded ethanol dehydration and liquid carbon dioxide critical point drying. Scanning electron microscopy of corneal epithelium revealed heavy ion irradiation of the tissue. Lesions with circular symmetry occured on the external plasma membranes of corneal epithelium which were irradiated with heavy ions, but similar lesions were not observed on the plasma membranes of X-ray irradiated or nonirradiated control samples. DOE

(DE81-028904; LBL-12954) Avail: NTIS HC A03/MF A01

An evaluation made of magnetic field effects on a broad range of physiological functions in laboratory mammals, including the measurement of circadian rhythms using noninvasive recording techniques. Results of investigations of magnetic field effects on the conformation of DNA, and on the growth and development of plants and insects are reported. Figures and tables provide a brief summary of some representative observations in each of the research areas described. No significant alterations were observed in any of the physiological parameters examined, with the exception of major changes that occur in the electrocardiogram during magnetic field exposure. This phenomenon is attributable to electrical potentials that are induced during pulsatile blood flow in the aorta and in other major vessels of the circulatory system. DOE

(Contract DE-AS02-76EV-02814)
(DE81-028535; DOE/EV-02814/3) Avail: NTIS HC A02/MF A01

In the last few years it became increasingly apparent that the enzymatic reactions leading to the incision of ultraviolet (UV) irradiated DNA are more complicated than the original single step model suggested. There may be at least two mechanisms to account for the multigenic control of this rate-limiting process. This mechanism is examined directly in mammalian cells by genetic complementation and immunological analysis of repair deficient human cell lines derived from patients with the repair deficiency xeroderma pigmentosum. DOE

**TOXICOLOGY AND METABOLISM OF NICKEL COMPOUNDS** Progress Report, 1 Dec. 1980 - 30 Nov. 1981

F. William Sunderman, Jr. 31 Jul. 1981 16 p refs
(Contract DE-AS02-76EV-03140)
(DE81-028924; DOE/EV-03140/T2) Avail: NTIS HC A02/MF A01

The toxicology and metabolism of nickel compounds (e.g., NiCl2, Ni3S2 and Ni(CO)4) were investigated in rats. A provisional reference method for analysis of nickel in whole blood by electrothermal atomic absorption spectrometry was developed. Five macromolecular (63)Ni-binding constituents in rat kidney cytosol were partially characterized. A spectrophotometric assay for N-acetyl-(ALPHA)-D-glucosaminidase (NAG) activity in urine was developed, and the NAG assay was applied to investigate nickel nephropathy in rats. The time-course, dose-response, and organ specificity of Ni(II)-induction of heme oxygenase activity in rats was elucidated. Intrarenal injection of Ni3S2 in rats was demonstrated to result in renal glomerulomegaly and mesangial hyperplasia, sialyl hyperplasia, and generalized arteriosclerosis. The dissolution rates of 17 nickel compounds were determined in water, rat serum and renal cytosol. NiTc, NiSb and NiAsB were discovered to be carcinogenic following intramusclar injection in Fischer rats. Nickel concentrations were surveyed in serum and urine of workers in two shipyards. DOE

**SIMULATED SPACEFLIGHT EFFECTS ON MATING AND PREGNANCY OF RATS**

Eric E. Sabelman (California Univ. at San Francisco), Peter V. Chetirkin, and Robin M. Howard Sep. 1981 44 p refs
(NASA-TM-81326; A-8461) Avail: NTIS HC A03/MF A01 CSCL 06C

The mating of rats was studied to determine the effects of: simulated reentry stresses at known stages of pregnancy, and full flight simulation, consisting of sequential launch stresses, group housing, mating opportunity, diet, simulated reentry, and postreentry isolation of male and female rats. Uterine contents, adrenal mass and abdominal fat as a proportion of body mass, duration of pregnancy, and number and sex of offspring were studied. It is found that: (1) parturition following full flight simulation was delayed relative to that of controls; (2) litter size was reduced and resorptions increased compared with previous matings in the same group of animals; and (3) abdominal fat was highly elevated in animals that were fed the Soviet paste diet. It is suggested that the combined effects of diet, stress, spacecraft environment, and weightlessness decreased the probability of mating or of viable pregnancies in the Cosmos 1129 flight and control animals. **EVALUATION OF THE CNS AND CARDIOVASCULAR EFFECTS OF PROLONGED EXPOSURE TO BROMOTRIFLUROMETHANE (CBrF3)** Final Technical Report, 1 Mar. 1980 - 1 May 1981

Irving Geller, Cynthia Garcia, Chester Gleiser, Richard Haines, Jr., Murray Hamilton, Roy Hartmann, Jr., Victor Mendez, Alan Samuels, and Maria San Miguel 1 May 1981 237 p refs
(NASA-CR-161078) Avail: NTIS HC A11/MF A01 CSCL 06T

The proposed use of bromotrifluoromethane (CBrF3) as a fire extinguishant in aircraft, spacecraft and submarines has stimulated increasing interest and research in the toxicological properties of this compound. In a spacecraft, because of its unique recirculating life support system, the introduction of CBrF3 by leakage or intentional discharge, will result in continuous exposure of crewman to low concentrations of this compound for periods of up to 7 days, or possibly even longer. The effects of low concentrations of CBrF3, under continuous exposure conditions, on the CNS and cardiovascular systems of animals to enable an assessment of these risks were investigated. T.M.

**COMPARATIVE STUDY OF METHODS OF IDENTIFICATION OF MODELS OF HUMAN REGULATORS [VERGLEICHENDE UNTERSUCHUNG VON IDENTIFIKATIONVERFAHREN FUER REGLER-MENSCH-MODELLE]**
Norbert Ninz 1980 209 p refs In GERMAN
(ILR-48; ISSN-0341-0587; ISBN-3-7983-0701-8) Avail: NTIS HC A10/MF A01

Various techniques applicable to the determination of the parameters of a quasi-linear system were utilized to analyze human identification processes. The techniques studied incuded the maximum likelihood estimator, the Kalman filter, and the cross-power density method. The productivity of the identification processes is addressed. Generators were constructed to produce both petroleum (SGF-2) and red phosphorus/butyl rubber (RP/BR) smoke aerosols. The petroleum smoke generator produced smoke concentrations of 2 to 10 mg/1 for several hours. The Battelle exposure chamber was used to expose male and female Sprague-Dawley rats to the petroleum aerosol at concentrations of 2.65 to 10.73 mg/1 for periods of 1 to 6 hours. Animal deaths occurred only in the 6 hour exposure to 10.73 mg/1. Rats were exposed to 3.15, 4.33, 5.36 and 8.46 mg/1 for 1 hour and 1.53 mg/1 for 4 hours. The 4.33 mg/1 exposure produced 50% mortality. Of the 40 animals exposed for 1 hour, 23 died within 14 days. All of these died on days 1, 2, 6, 8, 9, 10, or 11. Observed pathology, included marked erosion and edema of the laryngeal and proximal tracheal region. E.A.K.

**ASSESSMENT OF HEALTH IMPACTS FROM ELECTRICAL-POWER TRANSMISSION LINES**
Morton W. Miller 1980 16 p refs
(Contract DE-AC02-76EV-03490)
(UR-3490-2024) Avail: NTIS HC A02/MF A01

The types of investigations undertaken to test for possible biological effects of extremely low frequency (ELF) electric fields were numerous. However, neither animal and plant experimentation nor clinical studies nor experience with operating extremely high voltage (EHV) transmission lines have to date provided convincing evidence of a harmful effect from exposure to electric fields associated with transmission lines in spite of numerous attempts to find such effects. Analysis of internal fields and currents supports these observations as the levels appear to be too low to affect mamalian cells. Thus, while one can never prove the negative (i.e., that there is no effect), the overwhelming body of evidence indicates that the electric fields associated with high voltage lines have no deleterious biological effects. (DE81-027655; DOE/TIC-1027653) Avail: NTIS HC A05/MF A01

The effects of extremely low frequency (ELF) electric fields on transient patterns of circadian rhythms of physiological and behavioral end points were investigated. This project is developing a data base to determine the exposure conditions that disturb the highly characteristic waveforms of ultradian, circadian, and infradian rhythms. The following conclusions were reached: under a variety of exposure conditions the circadian regulatory system of the rat remained intact; brief ELF exposures at field strengths above 35 kV/m, presented during the inactive phase of the circadian cycle, produced a transient arousal in mice, characterized by increases in motor activity, carbon dioxide production, and oxygen consumption; the transient arousal habituated rapidly; no significant effects were seen in the second, third, or fourth exposure of mice using a one hour on, one hour off protocol; and there were no circadian aftereffects of the intermittent ELF stimulus in mice, based on measures of rhythms of activity and gas metabolisms. Studies of the effects of environmental low frequency electromagnetic fields on isolated cellular systems and tissue preparations derived from brain, bone, blood, and pancreas are reported. Behavioral effects of 60 Hz fields were examined in monkeys. Bioeffects of low level microwave fields modulated at 60 Hz and other ELF frequencies were also examined. Findings emphasize a key role for cell membrane surfaces in detecting ELF environmental fields. DOE

**THE NEURONAL POOL AS A FUNCTION UNIT IN THE CENTRAL NERVOUS SYSTEM (CNS)**
Anders Lansner 1980 34 p refs
(TRITA-NA-8009) Avail: NTIS HC A03/MF A01

The principles of information processing applied by these functional subunits are discussed starting from what is known about the properties of single neurons and synapses. The question of how quality, intensity and spatial properties of stimuli are coded in the trains of nerve impulses passed on along the nerve tracts is briefly treated. The information put into the neuronal pool via parallel nerve fibers is viewed as an input pattern. Each input pattern activates only a few of the neurons in the neuronal pool. Due to simultaneous presynaptic and postsynaptic activity these neurons become functionally connected to each other forming so called neuronal ensembles. The neuronal ensembles are postulated to make up the basic elements of activity in the neuronal pool and to influence each other mainly through parallel and serial association. Author (ESA)

**CRITERIA FOR ADEQUATE RADIATION CONTROL PROGRAMS (X RAY): A REPORT OF TASK FORCE 2A Final Report**
Dept. of Health and Human Services Apr. 1981 20 p refs
(Contract FDA-223-79-6010)
(PB81-197881; FDA/BRH-81/58; DHHS/PUB/FDA-81-8160) Avail: NTIS HC A02/MF A01 CSCL 06R

This guide was developed by the Task Force on Criteria for Adequate Radiation Control Programs (X Ray) at the direction of the Conference of Radiation Control Program Directors. This document presents the guidance of the Task Force as a result of its research and deliberations. It presents a method for determining the quality and quantity of the human resources necessary for the successful operation of a balanced, through and yet efficient X-ray control program at the state level. This report should serve as the basis by which state radiation control agencies, legislative bodies, as well as the public can make realistic evaluations regarding the adequacy of X-ray control programs. **COMPREHENSION AND ANALYSIS OF INFORMATION IN TEXT. 4: DECISION AND VERIFICATION PROCESSES Technical Report, 1 May 1980 - 26 May 1981**

Steve Antos (Ben Gurion Univ. of the Negev, Israel), Lyle E. Bourne, Jr., Ely Kozminsky (Ben Gurion Univ. of the Negev, Israel), and Walter Kintsch May 1981 54 p refs
(Contract N00014-78-C-0433; NR Proj. 157-422)
(AD-A102677; ICS-TR-104-ONR) Avail: NTIS HC A04/MF A01 CSCL 05/10

Reading texts for the purpose of making decisions was studied in a laboratory analog of a complex, natural, information-analytic domain. Subjects acting as stock brokers were trained in the first two sessions to categorize and evaluate stock report-type information. In addition, they learned to infer information from text-explicit facts. In Session three, subjects read texts and made decisions to Buy or Not Buy based on a conjuntive rule that was either given to the subject before (RB) or after (RA) reading the text. In Session 4, subjects read texts and then were presented probes that were to be verified as to either having or not having been presented in the previously read texts. Performance in all tasks was measured in terms of response latency, as well as accuracy. The results demonstrated that a specialized control schema for text comprehension develops that is based on the nature of the decision task. For example, readers in the RA versus the RB condition develop different text analysis techniques that are apparent in the decision, as well as the verification task performance. Most of the results are interpretable in terms of a model which suggests that purposes and goals relevant to the text comprehension process are incorporated into long-term memory (i.e., knowledge structures). The integration of these knowledge structures with current short-term information provides the basis of a task-appropriate text representation. Author (GRA)

**AGGREGATION BIAS IN ESTIMATES OF PERCEPTUAL AGREEMENT**

Lawrence R. James (Georgia Inst. of Technology) 1 Aug. 1981 22 p refs
(Contract N00014-80-C-0315; NR Proj. 170-904)
(AD-A102726; IBR-81-12) Avail: NTIS HC A02/MF A01 CSCL 05/1

It is shown that estimates of agreement based on group mean scores have been incorrectly interpreted as applying to perceptual agreement among individuals. Of initial importance is a study by Drexler (1977), who concluded that a considerable proportion of the variance in climate perceptions is accounted for by organizational membership. This conclusion has been employed recently by other authors to support the assumption that individuals in the same environment tend to agree with respect to climate perceptions. The present paper demonstrates that Drexler's analysis provided inflated estimates of agreement among individuals. The logic of the approach is then extended to other studies in which inflated estimates of agreement appeared likely. Author (GRA)

**EVALUATIONS OF A MODIFIED CREW SEAT FOR THE IROQUOIS**

B. A. J. Clark and S. R. Sarraille May 1980 42 p refs
(ARL/APP-Report-80; AR-001-815) Copyright. Avail: Issuing Activity

The aircrew of Iroquois helicopters criticized aspects of the comfort and safety provided by the crew seats and additional faults were identified in crash investigations. The complaints include: (1) lack of protection against hyperextension of the neck (whiplash) and against impact onto the shoulder strap guide at the top of the backrest; (2) discomfort and pain during and after use of the crew seats; and (3) lack of provision for occasional wearing of parachutes. Studies of a modified crew seat show that the proposed head restraint is adequately strong and should reduce the likelihood of hyperextension injury. Replacement of the net seat by a foam cushion did not give a reliable improvement in comfort, nor did it improve the crash protection. Continued use of either crew seat in the aircraft is likely to lead to chronic backache in some pilots. Further modifications are suggested. A.R.H.

(NASA-CR-167390; DRL-T-1286) Avail: NTIS HC A12/MF A01 CSCL 05H

The study examined impacts of changing Orbiter cabin pressure and EMU EVA pressure to eliminate pure O2 prebreathing prior to EVA. The investigation defines circumscribing physiological boundaries and identifies changes required within Orbiter to reduce cabin pressure. The study also identifies payload impacts, payload flight assignment constraints, and impacts upon EMU resulting from raising EVA pressure. The study presents the trade-off which optimizes the choice of reduced cabin pressure and increased EVA pressure. T.M.

**ANALYSIS OF MAN-IN-THE-LOOP CONTROL SYSTEMS IN THE PRESENCE OF NONLINEARITIES**

Robert T. Gschwind and Irving L. Chidsey Jun. 1981 45 p Supersedes ARBRL-MR-03110
(DA Proj. 1L1-61102-A-91A)
(AD-A102574; ARBRL-MR-03110) Avail: NTIS HC A03/MF A01 CSCL 05/9

The BRL and HEL are jointly investigating the effects of system nonlinearities on the accuracy of turret control systems with human operators in the loop. The system response at very low rates (one milliradian per second and less) is degraded because of the increased relative importance of nonlinear elements such as coulomb friction, backlash, and dead space. Good low rate response is necessary for accurate tracking of long range targets with laser designators and guided missile directors. This report describes the first phase of the BRL contribution to the joint project. This phase developed a simplified simulation of a turret control with a human transfer function. There is an adaptive algorithm to adjust the coefficients of the human transfer function to account for changes in the system characteristics. Backlash, coulomb friction, and dead space are introduced and their effects on system response and loop performance are documented. The next phase will adjust the simulation to agree with the system response of a concurrent turret measurement program. It will compare the loop performance to a concurrent experiment with a real man-in-the-loop. It will relate loop performance (tracking accuracy) to system response at low rates. Author (GRA)

Computer simulation is discussed and an alternative to methodologies upon relied. The development of computer simulation models suitable for representing human operators in industrial process simulations are developed and presented. Use of these models is demonstrated through the use of a particular simulation technique entitled, 'Systems Analysis of Integrated Networks of Tasks" (SAINT). This simulation pseudo-language is a combination network modeling and simulation technique designed for the analysis of man-machine systems is provided as well as a review of the literature on simulation of man-machine systems. The development of the human operator models (referred to as Smart SAINT) and their use as a design aid is described. DOE

**A COMPARISON OF POSSIBLE METHODS FOR MARINE FOULING ASSESSMENT DURING RAFT TRIALS**
John A. Lewis Apr. 1981 27 p refs
(MRL-R-808; AR-002-406; NAV-79/137; DST-77/006) Copyright. Avail: Materials Res. Labs., P.O. Box 50, Ascot Vale, Vic. 3032

Fouling settlement data from HMAS STIRLING (Western Australia), the North Barnard Islands (North Queensland) and Williamstown (Victoria) were to evaluate the suitability of different methods for settlement. Density, cover, frequency and biomass were measured to assess the abundance of settlement on panels immersed during raft trials. Frequency was the most suitable measure of individual species abundance for comparisons. It is found that panel cover and biomass are better indices of total fouling abundance than either density or frequency. E.A.K.

Finogenova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 5-8 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 7-9

Avail: Issuing Activity

Cardiac output was measured in anesthesized dogs directly (by the method of Fick and by electromagnetic flowmetry) and indirectly (by the method of Bremser-Ranke and by rheography). The measurements were carried out before and after drug tests. The absolute values of cardiac output at rest differed depending on the method used. After the drug test, all the methods revealed distinct changes in cardiac output. A good correlation between flowmetric and rheographic methods was demonstrated. Results indicated that both methods can be used in rapidly changing hemodynamic situations. The method of Bremser-Ranke proved more suitable for the processes developing within 30-40 seconds. R.C.T.

**EFFECT OF NEGATIVE PRESSURE AND OCCLUSION CUFFS ON INTRAVASCULAR PRESSURE IN LEGS OF HEALTHY MAN**
V. Ye. Katkov, V. V. Chestukhin, E. M. Nikolayenko, S. V. Gvozdev, and V. V. Rumyantsev *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 9-13 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 9-12
Avail: Issuing Activity

The effect of local negative pressure on the leg (with a bladder sealed above the knee) and occlusion cuffs (located as close as possible to Poupart's ligament) on the leg intravascular pressure was investigated in recumbency. Eight healthy volunteers participated in two experimental runs. Each of the two exposures was used at two levels: local negative pressure at -50 and -100 mm Hg; and occlusion cuffs at +40 and +50 Hg with exposure time averaging 5-7 min. Catheters were inserted into the femoral artery and vein, and arteries and veins of the back of the foot. The arterial pressure remained unchanged during both exposure (local negative pressure and occlusion cuffs). Upon exposure to local negative pressure the venous pressure in the back of the foot (with respect to the atmospheric pressure) did not change and in the femoral vein decreased. Upon exposure to occlusion cuffs the venous pressure in the back of the foot increased noticeably and in the femoral vein decreased slightly. R.C.T.

**EFFECT OF EXERCISE ON REACTIONS TO BREATHING A GAS MIXTURE WITH 5% CARBON DIOXIDE AND 14% OXYGEN**
N. P. Krasnikov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 44-47 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 33-35

Avail: Issuing Activity

The effect of a hypoxic hypercapnic gas mixture (5% CO2 + 14% O2) on the exercising man was studied. At a low work load inhalation of this gas mixture inhibited gas exchange, and after 10 month training stimulated it. Increase in physical endurance was followed by increase in human resistance to O2 deficiency and CO2 excess in the breathing mixture. Author

**SENSITIVITY TO ANTIBIOTICS OF LACTOBACILLI FROM DIGESTIVE TRACT OF SOYUZ-13 AND SALYUT-4 CREW MEMBERS**
A. A. Lentsner, M. E. Tyur, Kh. P. Lentsner, M. E. Mikelsaar, V. M. Shilov, N. N. Lizko, and G. D. Syrykh *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 83-87 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 36-39

Avail: Issuing Activity

Sensitivity to 10 antibiotics of 411 lactobacillar strains isolated from the saliva and feces of crewmembers who made 8, 30 and 63 day flights was determined. Antibiotic sensitivity remained unchanged even in the 63 day flight. The antibiotics tested produced different effects on the lactoflora that varied from gentle polymyxin and gentamycin, less gentle neomycin and monomycin, to hazardous pencillin and erythromycin, then rifampicin and levomycetin, and, finally, tetracyclin and oleandomycin. Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 48-52 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 39-43

Avail: Issuing Activity

The species composition and biology of lactoflora of the saliva and feces of crewmembers from 8, 30 and 63 day flights was investigated. Altogether 593 strains of lactobacilli were examined. The space flights did not cause significant changes in physiology, biochemistry, antagonistic properties or lysozyme activity of lactobacilli. They did not change drastically or unify the species composition of the digestive lactoflora. However, transfer of lactobacilli from one crewmember to another cannot be excluded, its probability increasing with flight time. Author

### MECHANISM OF ADRENOSYMPATHETIC SYSTEM REACTION TO SINGLE EXPOSURE TO VARIABLE MAGNETIC FIELD

S. A. Sakharova, A. I. Ryzhov, and N. A. Udintsov *In its* USSR Rept: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 71-73 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 52-56

Avail: Issuing Activity

In view of the complex nature and functional correlation between the adrenosympathetic system (ASS) and central nervous system, glucocorticoid function of the adrenals and catecholamine (CA) reserves, the role of these relationships in formation of the response of the ASS to a variable magnetic field (VMF) was investigated. Phenobarbital was used to exclude the central nervous system. Rausedyl was used to mobilize reserve catecholamines; dexasone induced compensatory atrophy of the adrenal cortex; after splanchnotomy, visible vessels and the lipid capsule were swabbed with formalin. The reaction of the ASS to VMF was absent in experiments where phenobarbital and rausedyl were administered and splachnotomy performed, whereas with administration of dexasone only a mediator part was not involved in the reaction. Experiments with rausedyl demonstrated that the CA reserve levels in organs play an important role in formation and degree of ASS reaction to the stressor, whereas the hemodynamic and morphological changes in cellular elements of organs induced by the field were related to mobilization of reserve CA. ### EFFECT OF ATTENUATED GEOMAGNETIC FIELD ON E. COLI RESISTANCE TO ULTRAVIOLET RAYS

O. A. Alferov and T. V. Kuznetsova *In its* USSR Rept. Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 74-79 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v 15, no 4, Jul. - Aug. 1981 p 57-58

Avail: Issuing Activity

The effect of an attenuated geomagnetic field on E. coli tolerance to ultraviolet irradiation was studied. The geomagnetic field was shielded to provide 40- and 160-fold attenuation. It was demonstrated experimentally that the 160-fold attenuated field increased E. coli tolerance, whereas the 40-fold attenuated field decreased it. The geomagnetic effect depended on the exposure time, reaching maximum after five passages of E. coli. An additional magnetic field smulating the geomagnetic field generated in a shielded chamber reversed the effect of an attenuated geomagnetic field. M.G.

### EFFECT OF FLIGHT ABOARD COSMOS-936 BIOSATELLITE ON CONTRACTILE PROPERTIES OF RAT MUSCLE FIBERS

V. S. Oganov, S. A. Skuratova, and M. A. Shirvinskaya *In its* USSR Rept: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 80-82 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 58-61

Contractile properties of glycerinated fibers of skeletal muscles of rats flown for 18.5 days on Cosmos-936 were investigated. In slow antigravitational muscles (soleus m. and triceps brachii m.), decrease in the amplitude of isometric tension and performance as well as acceleration of the contraction development were observed. A high specificity of reactions of

skeletal muscles to the experimental conditions is indicated, depending on their functional specialization. It is suggested that changes in contractile properties of myofibrillar proteins may contribute to the adaptive rearrangement of functional properties of antigravitational muscles under the influence of space flight.

### STATES OF CATECHOLAMINES AND ENZYMES OF SYNTHESIS THEREOF IN THE ADRENAL MEDULLA OF RATS AFTER FLIGHT ABOARD COSMOS-936 BIOSATELLITE

R. Kvetnyanski, T. Torda, R. A. Tigranyan, Yu. Chulman, and A. M. Genin *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 91-93 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 64-65

Avail: Issuing Activity

In the adrenals of weightless and centrifuged rats flown for 18.5 days onboard the biosatellite Cosmos-936, indicators of the activity of the adrenomedullary system, i.e., the content of catecholamines and activity of the enzymes involved in their synthesis (tyrosine hydroxylase and dopamine-beta-hydroxylase) were measured. It was found that none of the indicators changed postflight. These findings show that a prolonged exposure of rats to weightlessness does not act as a strong stressor for the adrenomedullary system.

### FLOUR BEETLE REPRODUCTION AND MUTABILITY IN WEIGHTLESSNESS (EXPERIMENTS ABOARD SALYUT-6 ORBITAL STATION)

G. P. Parfenov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 94-100 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 66-70

Avail: Issuing Activity

The effects of weightlessness on reproduction and mutability in beetles were investigated. Experiments with the flour beetle Tribolium castaneus showed that in weightlessness these insects completed their cycle of development--from fertilization to the emergence of mature imago of the next generation--in the normal way. Survival of specimens, densities of cultures, duration of development, and frequency of morphoses in flight and control studies were similar. Exposure to weightlessness did not increase the number of genetic changes.

### METHOD FOR EVALUATING RESPIRATORY SYSTEM REACTION TO INCREASING HYPERCAPNIA

L. A. Ivanov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 107-111 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, July. - Aug. 1981 p 74-76

Avail: Issuing Activity

The methodology and results of an experiment to test the effect of progressive hypercapnia on pulmonary ventilation are described. According to this method, the subject breathes from a spirograph, from which the CO2 absorber is removed. A carbograph is connected in parallel with the spirograph in order to record CO2 concentration concurrently with pulmonary ventilation. One finds the points in the system of coordinates characterizing the correlation between partial CO2 tension in alveolar air and minute volume by plotting the former on the x-axis and the corresponding later on the y-axis. By drawing a line through these points, one obtains a curve of minute volume as a function of PACO2, which reflects the reaction of the respiratory center to CO2. The intersection of this line on the x-axis corresponds to the point that characterizes PACO2 level, at which ventilation equals zero (sensitivity of the respiratory center to CO2).
M.G.

### LOG-LINEAR REGRESSION METHOD USED TO ASSESS QUALITY OF AIR SAMPLES IN FLUOROPLASTIC CONTAINERS

V. Ye. Ryzhkova, Ye. N. Kulkov, and K. N. Mikos *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 112-115 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 76-78

Avail: Issuing Activity

The possibility of using fluoroplastic containers for storage of air samples containing traces of organic matter was investigated. Gas chromatographic analysis of samples from containers was performed immediately after they were filled with a mixture, after 4, 6, 8, and 24 hours on the first day, then once a day for 10 days. The results show that there was virtually no change in concentrations of saturated hydrocarbons (methane, ethane) during storage. There was exponential change in levels of oxygen-containing organic substances (methanol, ethanol, acetone, and ethyl acetate). The change as particularly intensive in the first 6 hours. Regression analysis was performed to demonstrate dependence of concentration on storage time. A log-linear regression model was constructed using the least squares method.

### AGE-RELATED CHANGES IN BODY AND VISCERAL WEIGHT OF WISTAR RATS

G. I. Plakhuta-Plakutina, Ye. I. Alekseyev, G. N. Durnova, Ye. I. Ilina-Kakuyeva, A. S. Kaplanskiy, A. S. Pankova, Ye. A. Savina, V. N. Shvets, and V. I. Yakovleva *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 15, No. 4, Jul. - Aug. 1981 (JPRS-79085) 28 Sep. 1981 p 116-120 refs Transl. into ENGLISH from Kosm. Biol. Aviakosm. Med. (Moscow), v. 15, no. 4, Jul. - Aug. 1981 p 79-81

Avail: Issuing Activity

The patterns of growth of the body, absolute and relative weight of internal organs, endocrine glands, different muscles, and linear parameters of the skeleton of the Wistar rat were investigated. The results indicate that rats grow the most intensively up to the 80th to 90th day of postnatal ontogenesis. Starting in the third month of life there is some stabilization of the relative weight of internal organs. It is recommended to use animals from the age of 3 months in experiments conducted to investigate the effects of various extreme factors on the adult organism. Additional recommendations are given. M.G.

**NON-INVASIVE METHOD AND APPARATUS FOR MEASURING PRESSURE WITHIN A PLIABLE VESSEL**
Masashi Shimizu 19 Feb. 1981 14 p
(NASA-Case-ARC-11264-1; US-Patent-Appl-SN-235866) Avail: NTIS HC A02/MF A01 CSCL 06B
A non-invasive method and apparatus for measuring pressure within a pliable vessel such as a blood vessel are described. The blood vessel is clamped by means of a clamping structure having a first portion housing a pressure sensor, and a second portion extending over the remote side of the blood vessel for pressing the blood vessel into engagement with the pressure sensing device. The pressure sensing device includes a flat deflectable diaphragm portion arranged to engage the blood vessel. In one embodiment, the clamp structure includes first and second semicylindrical members held together by retaining rings. In a second embodiment the clamp structure is of one piece construction having a solid semicylindrical portion and a hollow semicylindrical portion with a longitudinal slot in the hollow semicylindrical portion through which to slip the blood vessel. In a third embodiment, an elastic strap is employed for clamping the blood vessel against the pressure sensing device. NASA

(AD-A095369) Avail: NTIS HC A02/MF A01 CSCL 06/16
This report focuses on the fundamental mechanisms by which light energy is converted into a neural response in visual photoreceptor cells. Research in this area has approached the stage that permits the piecing together the molecular mechanisms between absorption of light and the generation of a neural response. Consideration is given to the primary molecule of visual photoreception--rhodopsin. The molecule is composed of a form of vitamin A which is called retinal, and this form of vitamin A is connected through a Shift base-nitrogen linkage to a membrane glycoprotein matrix called opsin. The combination of retinal and opsin is called rhodopsin. The question of light absorption by rhodospin is discussed. It has been generally accepted that

retinal interaction indeed undergoes structural alteration between rhodopsin and bathorhodopsin. A new aspect represented by the above mechanism is a movement of the proton in the protein. Measurements indicated that, as a result of the absorption of light, one of the first molecular events is the motion of a proton, and this is probably the first ion movement that is initiated by the rhodopsin molecule. Other experiments are showing that there are several other chemical species activated by the absorption of light in the rhodopsin molecules. GRA

**HUMAN ENGINEERING EVALUATION OF THE HYPERBARIC RESEARCH FACILITY** Final Report
J. I. Brady and M. D. Curley Jul. 1981 69 p refs
(AD-A103681; NMRI-81-47) Avail: NTIS HC A04/MF A01
CSCL 14/2

The human engineering evaluation and human factors deficiencies were studied. Recommendations for alterations or additions were made which are grouped under the headings of: work place or watch station, environment, personnel, and emergency systems. The majority of recommendations dealt with control panel layouts, functional grouping, gauge placement, and chamber habitability. At the present time, the most serious problem identified is the excessive noise levels in the control area of the chambers. Octave band analysis reveals that: (1) the primary noise sources are the life support loops and the building air conditioning system, and (2) because of the frequency distribution of the noise, ear protectors are not a viable solution since the peak noise levels fall in the same frequency range as the peak levels in male speech. Light levels throughout the complex generally fall within acceptable limits. The necessity for increased manpower is recommended. The HRF's emergency system displays high attention getting value through both auditory and visual alarms, and good readability. E.A.K.

**MEASURING SLEEP BY WRIST ACTIGRAPH** Annual Report, 1 Apr. 1980 - 31 Mar. 1981
Daniel F. Kripke, John B. Webster, Daniel J. Mullaney, Sam Messin, and William Mason Mar. 1981 34 p refs
(Contract DAMD17-78-C-8040)
(AD-A103196; AR-3) Avail: NTIS HC A03/MF A01 CSCL 06/16

A method of monitoring personnel sleep and activity in field conditions needed to promote medical planning for modern combat was investigated. A wearable digital activity system was programmed, tested, and evaluated. A computer process for recognizing sleep from this system was defined. The systems allow collection of data from freely ambulatory subjects who can be scored automatically for sleep/wake with accuracy comparable to EEG scoring. The microprocessor based digital activity monitor is built to specifications, and external activity and illumination transducers are added. Since the errors that occur include both misscoring sleep as wake and vice versa, they tend to cancel. It is concluded that design criteria for a miniaturized wrist mounted activity monitor are suitable for field or combat use. E.A.K.

**A FAST WALSH TRANSFORM ELECTROCARDIOGRAM DATA COMPRESSION ALGORITHM SUITABLE FOR MICROPROCESSOR IMPLEMENTATION** Final Report, Jun. - Aug. 1980
Walter S. Kuklinski and Al M. Zied Jun. 1981 27 p refs
(AF Proj. 7755)
(AD-A104115; SAM-TR-81-13) Avail: NTIS HC A03/MF A01 CSCL 06/5

The feasibility of using a sequency-ordered Fast Walsh transform algorithm in a transformation-type ECG data compression scheme was demonstrated. The relationship of the mean square error between the original and reconstructed ECG signals as a function of the number of Walsh coefficients retained and the number of bits used to represent each coefficient was determined. A finite impulse response digital low-pass filter was tested as a means of improving the diagnostic characteristics of the reconstructed ECG waveforms. Suggestions for further work in this area are included. Author (GRA)

**AEROSOL FACTORS AFFECTING RESPIRATORY DEPOSITION**
P. E. Morrow 1981 13 p refs Presented at the Conf. on Deposition and Clearance of Aerosols in the Human Respiratory Tract, Bad Gleichenberg, Austria, 22 May 1981
(Contract DE-AC02-76EV-03490)
(DE81-024425; UR-3490-2026; CONF-810584-1) Avail: NTIS HC A02/MF A01

Aerosol deposition in the human respiratory system results from the interaction of the physical properties of the aerosol particles, the constantly changing dynamic character of the respired air, and the special architecture of the conducting airways and pulmonary parenchyma. These aspects fall into two categories: those derived from the aerosol and those associated with the human respiratory system, per se. Particle size is the most significant and in this respect, specifically, the hygroscopicity of particles and the heterodispersity of aerosols. Hygroscopicity is discussed in the context of the inconsistent data on respiratory humidification and temperature and their impact on hygroscopic growth models and particulate deposition estimations. Heterodispersity of aerosols considers the application of several models of respiratory functional anatomy and of aerosol deposition. The mass deposition estimates based on monodisperse particles and these models were found to be satisfactory for heterodisperse aerosols. DOE

**ECG-CONVERTER** Final Report
Wolfgang Mueller Bonn Bundesministerium fuer Forschung und Technologie Nov. 1980 23 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-80-111; ISSN-0340-7608) Avail: NTIS HC A02/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 4,80

A conversion unit was designed which makes it possible to display a person's heart signal on the screen of a normal television (TV) receiver. The ECG signals, picked up from the patient, are amplified and then digitalized and stored in a high speed random access memory (RAM). This RAM is cyclically read out so that for each line of the TV picture, the total content is checked once. The complete content is fed to a comparator where it is compared with the line valence. In the case of equality, a dot is written at that place in the line. The analog signal is converted to a video signal which fits to any TV standard. After it is modulated with a carrier, this signal can be sent to any TV set and antenna plug. Author (ESA)

The chronic effects of our pollution volunteers from East Cleveland, Ohio and counterparts from Elyria, Ohio was studied. The East Cleveland area was chosen for its proximity to heavy industrial air pollution, and Elyria, because it is an urban area with an excellent record for air quality. Air quality was monitored by two aerometric stations in each city. It is indicated that there are some significant differences in the young age groups for lung function tests and questionnaire responses in favor of Elyria residents. Differences in the older age groups, favor the Cleveland residents. It is suggested that there is some selective migration associated with the Cleveland study area and that there may be an air pollution effect on the younger volunteers. GRA

**EFFECTS OF SULFURIC ACID MIST EXPOSURE ON PULMONARY FUNCTION** Final Report, 1 Apr. 1977 - 31 Aug. 1980
Steven M. Horvath, Lawrence J. Folinsbee, and John F. Bedi Jun. 1981 92 p refs
(Grant EPA-R-804853)

(PB81-208877: EPA-600/1-81-044) Avail: NTIS HC A05/MF A01 CSCL 06F

Effects of 2 hr exposure to sulfuric acid (H2SO4) on pulmonary functions in male nonsmokers were examined. Mass media diameter was 0.92 micrometer, a sequence of 20 min exercise and 20 min rest was repeated three times during each exposure. Pulmonary functions were measured preexposure and postexposure. No significant changes in pulmonary functions were observed for HESO4 exposure. An increased prevalence of symptoms, was observed for H2SO4 exposure, suggesting that H2SO4 may have caused some pulmonary irritation though not sufficient to induce functional changes. It is concluded that 2 hr exposure, with intermittent exercise, to H2SO4 in the one micrometer size range and in concentrations up to 1100 micrograms/cu m was relatively minor affects on the pulmonary system. **PROCEDURES FOR EVALUATING NONPERTURBING TEMPERATURE PROBES IN MICROWAVE FIELDS** *Final Report*

Christian U. Hochuli May 1981 44 p refs Sponsored in part by World Health Organization

(PB81-205882: FDA/BRH-81/67: DHHS/PUB/FDA-81/8143) Avail: NTIS HC A03/MF A01 CSCL 06B

Test procedures performed on nonperturbing thermometer probes specifically intended for use in microwave fields are described. The procedures included tests for: accuracy of temperature measurement, temperature stability over time, and radiofrequency interference in the instrumentation. It is indicated that the newly designed probes are less perturbing in phantoms of simulated muscle tissue irradiated by microwave diathermy applicators and, therefore, are candidates for use in monitoring temperature during hyperthermia treatments. **APPLICATIONS OF ADVANCED EXPERIMENTAL METHODS TO VISUAL TECHNOLOGY RESEARCH SIMULATOR STUDIES: SUPPLEMENTAL TECHNIQUES Final Report, 26 May 1978 - 31 Mar. 1980**

Charles W. Simon Orlando, Fla. Naval Training Equipment Center Jan. 1981 125 p refs

(Contracts N61339-78-C-0060, N61339-78-C-0096; NAVTRAEQUIPC Proj. 4781-6P5)

(AD-A095633: CWS-01-80; NAVTRAEQUIPC-78-C-0060-3) Avail: NTIS HC A06/MF A01 CSCL 05/9

This report is made up of a series of individual papers on techniques to enhance the behavioral research methods being used in the VTRS, or Visual Technology Research Simulator (formerly referred to as AWAVS, or Aviation Wide-Angle Visual System). These methods are applicable to many other topical areas in addition to flight simulation. The techniques discussed, which relate to problems of design, analysis and interpretation, are important addends to material discussed elsewhere by the author. The following techniques are discussed. What to do when the model for the experimental design inadequately represents the empirical data: Using Yates: algorithm with screening designs; Analyzing residuals; Identifying the experimental conditions in 2 (to the k minus p power) designs when given the defining generators; An economical design for screening interaction effects; Graphic method and internal comparison for multiple response data; The place for replication in economical multifactor research; The significance of tests of statistical significance; Determining the probability of accepting the null hypothesis when in fact it is false; Testing non-additivity in experimental data from a Latin square design; How to include factors with more than two levels in a screening design; Analyzing extra-period change-over designs; Analyzing serially-balanced sequence designs; and Design economy when experimental factors selectively affect bi-variate criteria. **EFFECT OF DIFFERENT RUNWAY SIZE ON PILOT PERFORMANCE DURING SIMULATED NIGHT LANDING APPROACHES**

Henry W. Mertens and Mark F. Lewis Feb. 1981 21 p refs

(AD-A102190; FAA-AM-81-5) Avail: NTIS HC A02/MF A01 CSCL 06/16

In Experiment 1, three pilots flew simulated approaches and landings in a fixed-base simulator with a computer-generated-image visual display. Practice approaches were flown with an 8,000-ft-long runway that was either 75, 150, or 300 ft wide; test approaches were to runways with widths of 75, 100, 150, 200, and 300 ft. In Experiment 2, 40 pilots controlled the slant of a moving model runway during simulated night visual approaches. Five different models simulated runways from 100 to 300 ft wide and 3,000 to 9,000 ft long. As predicted, training on a wide runway in Experiment 1 lowered approach angle in approaches to narrower runways; a narrow practice runway also raised approach angles to wider runways. The magnitude of these practice effects increased as distance from runway threshold decreased. There was also a general tendency for approach angles to decrease as runway width decreased. The latter effect was corroborated in Experiment 2; in addition, generated approach angles decreased with increasing runway length. Giving half the pilots information about runway size prior to each approach had no effect on responses. These findings add to the quantitative evidence of danger in night visual approaches due to visual illusions and large variability in the visual perception of approach angle. GRA

**ADVANCED COMPUTER IMAGE GENERATION TECHNIQUES EXPLOITING PERCEPTUAL CHARACTERISTICS** *Final Report*

Anthony J. Stenger, Timothy A. Zimmerlin, James P. Thomas, and Myron Braunstein Aug. 1981 330 p refs

(Contract F33615-78-C-0020; AF Proj. 6114)

(AD-A103365: AFHRL-TR-80-61) Avail: NTIS HC A15/MF A01 CSCL 09/2

The study objectives involve applying psychological knowledge of visual perception to improve real-time computer image generation (CIG) simulators. The primary objective is to suggest and identify CIG algorithms for visual simulation that improve the training effectiveness of CIG simulators. The secondary objective is to identify areas of basic research in visual perception that have a significant impact on improving CIG technology. The project proceeded in a sequence of three phases. The first phase entailed observing existing CIG simulators. During the second phase existing perceptual knowledge was studied in light of the capabilities and limitations of existing CIG simulators. In the third phase improved CIG algorithms were developed and relevant areas for further perceptual research were identified. Author (GRA)

**ORGANIZATIONAL BEHAVIOR**
Larry L. Cummings and R. B. Dunham 3 Aug. 1981 91 p refs
(Contract N00014-79-C-0750; NR Proj. 170-892)
(AD-A103625; TR-1-1-8) Avail: NTIS HC A05/MF A01 CSCL 05/1

This paper reviews the literature on organizational behavior from 1977 through the first quarter of 1981 and attempts to be projective and prescriptive as well as descriptive of the work covered. Selected topics reviewed include new overviews and integrations of the field, task design, feedback, organizational structure, technology, and control, new conceptualizations and emerging topical trends. These topics were chosen to reflect both current and controversial issues to recent research. Additionally, this review attempts to bring the macro or organizational side of organizational behavior into focus and analysis and conclusions are drawn concerning theoretical and research needs. Finally, it projects the likely developments within organizational behavior. Author (GRA)

**FIELD STUDY DETERMINATION OF VENTILATORY REQUIREMENTS OF MEN RAPIDLY EVACUATING A SPACE LAUNCH COMPLEX** Final Report, Jan. - Feb. 1980
Loren G. Myhre Nov. 1980 24 p
(AF Proj. 7930)
(AD-A095532; SAM-TR-80-43) Avail: NTIS HC A02/MF A01 CSCL 06/19

Physiological variables, including heart rate and minute ventilation, were monitored for 3 men and 1 women during field trails simulating the emergency evacuation of Space Launch Complexes (SLC) 4E and 4W at Vandenberg AFB in January 1980. It was concluded that a reasonably fit adult male rapidly evacuating the SLC works at a load approximating 65% of his aerobic capacity. Associated with this level of work is a ventilatory requirement of about 51 liters/min with corresponding peak inspiratory flow rates predicted to average about 180 liters/min. Under these conditions excessive rebreathing of expired air with the concomitant onset of hypoxia was clearly evident when wearing the Robertshaw Air Capsule is deemed to be unsuitable as a respiratory protection device during rapid evacuation of the SLG; its limited air supply (about 5 min) renders it a marginal device for a walking evacuation which requires about 4 min, 19 sec. The degree of protection from airborne contaminants provided by the Robertshaw Air Capsule under work stress conditions simulating both (a) rapid and (b) walking evacuation awaits laboratory testing. GRA

**N81-33821#** Naval Air Development Center, Warminster, Pa. Aircraft and Crew Systems Technology Directorate.
**THE DEVELOPMENT AND AIRBORNE TESTING OF THE PALE SEAT** Final Report
Harald J. vonBeckh 20 Jun. 1981 102 p refs
(ZF61412001)
(AD-A103663; NADC-81200-60) Avail: NTIS HC A06/MF A01 CSCL 05/8

The development, centrifuge testing and airborne evaluation of the G-protective PALE (Pelvis and Legs Elevating) seat are described. This articulated seat achieves supination by elevating the pelvis and legs forward and upwards, while the head and shoulders barely move. Thus, out-of-the-cockpit vision and vision of displays are unchanged; labyrinthine symptoms are avoided, and head-up displays (HUD) can be easily used because the distance between windshield and eyes does not change. A historical review will list and describe all known seat configurations for prone and supine positioning that reached the stage of the airborne testing. The urgency to provide fighter aircraft with transverse positioned seats is emphasized. It is concluded that squadron of aircraft equipped with these seats will have an advantage in air combat situations. Author (GRA)

**THE DEVELOPMENT AND UTILIZATION OF INTEGRATED MULTIDIMENSIONAL DISPLAYS** Final Report, 1 Jun. 1976 - 30 Nov. 1980
Robert G. Pachella Feb. 1981 19 p refs
(Contract N00014-76-C-0648; NR Proj. 197-035)
(AD-A103170; HPC-67) Avail: NTIS HC A02/MF A01 CSCL 05/8

The purpose of this contract was to establish a program of research that would lead to basic facts about the nature of complex integrated multidimensional displays and their compatibilities with human perceptual abilities. Further, it was our goal to develop a comprehensive theory of multidimensional integrality as well as methodological techniques to investigate these questions. During the four and a half years of the contract's duration nine technical reports were issued and two more reports are in preparation. These detail the various empirical and theoretical pursuits of the principal investigator and his colleagues. A bibliography of these technical reports is appended. In addition to these written reports, contract work was reported orally at 16 scientific meetings and conferences. The research supported by the contract is presented under four major headings: (a) preliminary analyses of dimensional integrality, (b) necessary methodological developments for the study of integrality, (c) empirical findings and theoretical development, and (d) work in preparation. GRA

**N81-33824#** Anthropology Research Project, Yellow Springs, Ohio.
**AN ANTHROPOMETRIC DATA BASE FOR COMMERCIAL DESIGN APPLICATIONS, PHASE 1** Final Report, 1 Sep. 1980 - 28 Feb. 1981
John T. McConville, Kathleen M. Robinette, and Thomas Churchill 24 Feb. 1981 46 p refs
(Grant NSF DAR-80-09861)
(PB81-211070; NSF/BNS-81001) Avail: NTIS HC A03/MF A01 CSCL 05E

The feasibility of using for civilian designs the comprehensive body size data presently available to the armed forces was studied. The creation of an anthropometric data base for civilian uses from assembled data that were analyzed and applied to the design of military clothing, equipment, and workspaces is proposed. Statistical matching procedures and regression estimates were used to demonstrate that body sizes of U.S. males of working age, is characterized by information extrapolated from selected military samples. A large number of U.S. women is represented by military body size data, although military data were not available for women over 220 pounds. It is concluded that most commercial and industrial design needs for body size data can be met from the military data. GRA

**N81-33825#** Dynamic Science, Phoenix, Ariz.
**ANTHROPOMORPHIC DUMMY POSITIONING AND REPEATABILITY MEASUREMENTS** Final Report, Oct. 1980 - Jan. 1981
Jan. 1981 60 p
(Contract DT-NH22-80-C-0263)
(PB81-212367; Rept-3112-81-004; DOT-HS-805882) Avail: NTIS HC A04/MF A01 CSCL 13F

The purpose of the tests conducted was two fold: to determine if the proposed compliance procedure would provide repeatable results; and to see if the requirements can be met without violating the anchorage location requirements specified in FMVSS 210. Repeatability in the positioning of the upper torso of the dummy was poorer for the van and pick-up than for passenger cars. Position of the belt in the belt fit zone is not highly sensitive to variations in dummy position. For standard belt systems tested, modifications made to the seat belt assemblies would still meet the requirements of FMVSS 210. GRA

**BIODYNAMIC RESPONSE TO WHOLE-BODY VIBRATION**

M. J. Griffin *In* The Shock and Vibration Information Center (Defense) The Shock and Vibration Dig., Vol. 13, No. 8 Aug. 1981 p 3-12 refs

Avail: SVIC, Code 5804, Naval Research Lab., Washington, D.C. 20375: $15.00/set CSCL 06/S

Experimental studies of biodynamic response to vibration and some attempts to model this response are reviewed. It is proposed that biodynamic models should be classified according to their general application. It is shown that the responses of the body to vibration are highly varied and that there is a need for increased availability of experimental biodynamic data. Author

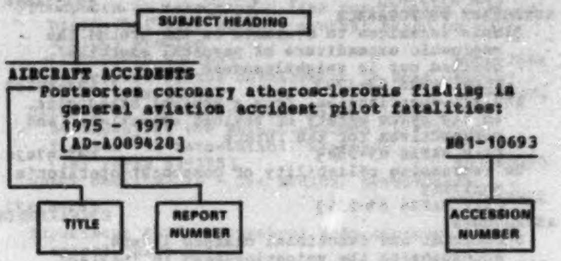
# SUBJECT INDEX

AEROSPACE MEDICINE AND BIOLOGY /*A Continuing Bibliography (Suppl. 227)* JANUARY 1982

## Typical Subject Index Listing



SUBJECT HEADING
AIRCRAFT ACCIDENTS
Postmortem coronary atherosclerosis finding in general aviation accident pilot fatalities: 1975 - 1977
[AD-A089420]
N81-10693
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ACCELERATION PROTECTION**
The development and airborne testing of the PALE seat

AIR SAMPLING
Log-linear regression method used to assess quality of air samples in fluoroplastic containers
N81-33796

AIRCRAFT ACCIDENT INVESTIGATION
A histopathological study of coronary arteries in aircrew fatalities during 1962-1978
A81-49951

AIRCRAFT DESIGN
Real time simulation of OAS Phase I controls and displays --- Offensive Avionics System from human engineering standpoint
A81-48375

AIRCRAFT LANDING
Effect of different runway size on pilot performance during simulated night landing approaches
[AD-A103190] N81-33816

AIRCRAFT PILOTS
Analytic derivation of training transfer effectiveness ratios /TERs/ for new training systems --- for Navy pilots
A81-48360
Backache in helicopter pilots
A81-49953

ALGORITHMS
A Fast Walsh transform electrocardiogram data compression algorithm suitable for microprocessor implementation
[AD-A104115] N81-33808

ALTITUDE SIMULATION
Study of apexphonocardiogram and carotid pulsation during short term hypoxia in a decompression chamber
A81-49955

ALTITUDE TOLERANCE
Oxygen provision to humans under conditions of high-altitude flight
A81-47150

AMPHETAMINES
Relative efficacy of the proposed Space Shuttle antimotion sickness medications
[IAF PAPER 81-177] A81-47391

ANALOG TO DIGITAL CONVERTERS
ECG-converter --- normal television receiver interface
[BMFT-FB-T-80-111] N81-33810

ANGULAR VELOCITY
Moving and the motion after-effect
A81-47665

ANIMALS
Development of an Animal Holding Facility for Space Shuttle studies
[IAF PAPER 81-171] A81-47389
Effect of hypoxia on affinity of hemoglobin for oxygen in animals
N81-33802

ANTHROPOMETRY
An anthropometric data base for commercial design applications, phase 1
[PB81-211070] N81-33824

ANTIBIOTICS
Sensitivity to antibiotics of lactobacilli from digestive tract of Soyuz-13 and Salyut-4 crew members
N81-33782

ARM (ANATOMY)
A novel design for a robot arm
A81-47990

ARRHYTHMIA
Characterization of left ventricular mechanical function during arrhythmias with two dimensional echocardiography. I - Premature ventricular contractions
A81-49327
Cardiac arrhythmias in service personnel - An electrophysiologic evaluation
A81-49956

ARTERIOSCLEROSIS
The use of ultrasonic spectroscopy to characterize calcified lesions
A81-47047

ARTIFICIAL GRAVITY
Artificial gravity as a means of preventing atrophic skeletal changes
N81-33791

ARTIFICIAL INTELLIGENCE
Selected research publications in cognitve science by Rand staff: 1979-1980
[AD-A103311] N81-33817

ARTIFICIAL SATELLITES
Spacecraft and stellar occulations by turbulent planetary atmospheres. A theoretical investigation of various wave propagation effects and their impact on derived profiles of refractivity, temperature and pressure
[AD-A103069] N81-32846

ASTRONAUT PERFORMANCE
Simple technique to evaluate on the ground the energetic expenditure of physical exercise carried out in weightlessness
[IAF PAPER 81-170] A81-47388
Italy's contribution, from a medical standpoint, to the space safety of payload scientists, and perspectives for the future
[IAF PAPER 81-250] A81-47424
On increasing reliability of cosmonaut-operator's activity
[IAF PAPER 81-255] A81-47427

ASTRONAUTS
Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach
[IAF PAPER 81-175] A81-47390

ATMOSPHERIC TURBULENCE
Spacecraft and stellar occulations by turbulent planetary atmospheres. A theoretical investigation of various wave propagation effects and their impact on derived profiles of refractivity, temperature and pressure
[AD-A103069] N81-32846

ATROPHY
Artificial gravity as a means of preventing atrophic skeletal changes
N81-33791

AUSTRALIA
A comparison of possible methods for marine fouling assessment during raft trials
[MRL-R-808] N81-33769

AUTOREGRESSIVE PROCESSES
Experimental studies on the estimation of the dynamic characteristics of the human operator
A81-48189

AVIONICS
Computer-based simulations for man-computer system design --- for aircraft weapon systems
A81-48374
Real time simulation of OAS Phase I controls and displays --- Offensive Avionics System from human engineering standpoint
A81-48375

B

BACK INJURIES
Backache in helicopter pilots
A81-49953

BACKGROUND NOISE
Efficiency of human visual signal discrimination
A81-48225

BEHAVIOR
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] N81-32857
Evaluation of short-term bioassays to predict functional impairment, development of neurobehavioral bioassays in laboratory animals, directory of institutions/individuals
[AD-A104225] N81-33770

BIBLIOGRAPHIES
Publications of the Exobiology Program for 1980: A special bibliography
[NASA-TM-83800] N81-32869
Selected research publications in cognitve science by Rand staff: 1979-1980
[AD-A103311] N81-33817
Organizational behavior --- bibliographies
[AD-A103625] N81-33819

BIOASSAY
Evaluation of short-term bioassays to predict functional impairment, development of neurobehavioral bioassays in laboratory animals, directory of institutions/individuals
[AD-A104225] N81-33770
BIOASTRONAUTICS
Closed ecosystems as the means for the outer space exploration by man /Experimental results, perspectives/
[IAF PAPER 81-164] A81-47383
Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies
[IAF PAPER 81-165] A81-47384
Life support system development in West Germany
[IAF PAPER 81-167] A81-47386
Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach
[IAF PAPER 81-175] A81-47390
Space settlements - The medical perspective A81-48868

BIODYNAMICS
Experiment K307: Vertebral body strength of rat spinal columns N81-32837
Biodynamic response to whole-body vibration N81-34136

BIOENGINEERING
Procedures for evaluating nonperturbing temperature probes in microwave fields
[PB81-205082] N81-33813
BIOINSTRUMENTATION
A new CT collimator for producing two simultaneous overlapping slices from one scan --- for biomedical applications A81-47675
Method for attaching cerebral thermocouple wires to the dog's skull N81-33800
Non-invasive method and apparatus for measuring pressure within a pliable vessel
[NASA-CASE-ARC-11264-1] N81-33804
BIOLOGICAL EFFECTS
Theoretical and observational analysis of individual ionizing particle effects in biological tissue
[LBL-11147-REV] N81-32847
Biological effects of high DC magnetic fields
[DE81-028904] N81-32848
Evaluation of the CNS and cardiovascular effects of prolonged exposure to bromotrifluromethane (CBrF3)
[NASA-CR-161078] N81-32853
Assessment of health impacts from electrical-power transmission lines
[UR-3490-2024] N81-32856
Tissue interaction with nonionizing electromagnetic fields
[DE81-027654] N81-32858
Evaluation of short-term bioassays to predict functional impairment, development of neurobehavioral bioassays in laboratory animals, directory of institutions/individuals
[AD-A104225] N81-33770
BIOLOGICAL EVOLUTION
Recent progress in exobiology and planetary biology
[IAF PAPER 81-308] A81-47447
The evolutionary development of vertebrate thermoregulation A81-48119
Origin of life between Scylla and Charybdis --- computerized simulation of primordial chemical evolution A81-48725
Geomagnetic field - Its role in the evolution of life and intelligence on earth A81-49917
Publications of the Exobiology Program for 1980: A special bibliography
[NASA-TM-83808] N81-32869
BIOMASS
Experimental estimation of the functional possibilities of higher plants as medium regenerators in life support systems
[IAF PAPER 81-169] A81-47387
A comparison of possible methods for marine fouling assessment during raft trials
[MRL-R-808] N81-33769
BIOMEDICAL DATA
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] N81-32857
BIOMETRICS
Computer use for automatic measurement of some physiological parameters N81-33794
Subcutaneousy implanted connector to record arterial pressure and make electrical contact N81-33799
Non-invasive method and apparatus for measuring pressure within a pliable vessel
[NASA-CASE-ARC-11264-1] N81-33804
BIOPHYSICS
Biological flows
[DGLR PAPER 81-001] A81-47574
BIOSATELLITES
Metabolic changes in the animals subjected to flight in the biosatellites 'Cosmos'
[IAF PAPER 81-179] A81-47393
Simulated spaceflight effects on mating and pregnancy of rats
[NASA-TM-81326] N81-32852
BLOOD FLOW
Biological flows
[DGLR PAPER 81-001] A81-47574
Comparison of direct and indirect methods of measuring cardiac output N81-33773

BLOOD PLASMA
Effects of microwave irradiation on human blood platelets A81-47678
BLOOD PRESSURE
Osmoregulation and interstitial fluid pressure changes in humans during water immersion A81-48075
Effect of negative pressure and occlusion cuffs on intravascular pressure in legs of healthy man N81-33774
Subcutaneousy implanted connector to record arterial pressure and make electrical contact N81-33799
Non-invasive method and apparatus for measuring pressure within a pliable vessel
[NASA-CASE-ARC-11264-1] N81-33804
BLOOD VESSELS
Non-invasive method and apparatus for measuring pressure within a pliable vessel
[NASA-CASE-ARC-11264-1] N81-33804
BLOOD VOLUME
Prognostic value of blood cholesterol level in healthy subjects N81-33780
BODY COMPOSITION (BIOLOGY)
Experiment K-316: Effects of weightlessness on body composition in the rat N81-32844
BODY FLUIDS
Echoventriculometry used to study spinal fluid circulation during redistribution of fluids in a cranial direction N81-33777
BODY MEASUREMENT (BIOLOGY)
An anthropometric data base for commercial design applications, phase 1
[PB81-211070] N81-33824
BODY TEMPERATURE
Thermal stress in high speed low level flying A81-49362
BODY WEIGHT
Scaling of metabolic rate on body mass in small laboratory mammals A81-47894
Age-related changes in body and visceral weight of Wistar rats N81-33797
BONE DEMINERALIZATION
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3B: Mineralization in the long bones N81-32836

BONE MARROW
Experiment K305: Quantitative analysis of selected bone parameters
N81-32832
BONES
Experiment K305: Quantitative analysis of selected bone parameters
N81-32832
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 1: Effects of weightlessness on osteoblast differentiation in rat molar periodontium
N81-32833
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 2: Bone elongation rate and bone mass in metaphysis of long bones
N81-32834
Experiment K307: Vertebral body strength of rat spinal columns
N81-32837
Experiment K-310: The effect of spaceflight on osteogenesis and dentinogenesis in the mandibles of rats
N81-32839
Experiment K-310: The effect of space flight on osteogenesis and dentinogenesis in the mandible of rats. Supplement 1: The effects of space flight on alveolar bone modeling and remodeling in the rat mandible
N81-32840
Experiment K-314: Fetal and neonatal rat bone and joint development following in Utero spaceflight
N81-32842
Experiment K-317: Bone resorption in rats during spaceflight
N81-32845
Artificial gravity as a means of preventing atrophic skeletal changes
N81-33791
BROMIDES
Effects of ethidium bromide on development and aging of Drosophila - Implications for the free radical theory of aging
A81-48056

C

CALCIFICATION
The use of ultrasonic spectroscopy to characterize calcified lesions
A81-47847
CARBOHYDRATE METABOLISM
Experiment K304: Studies of specific hepatic enzymes and liver constituents involved in the conversion of carbohydrates to lipids in rats exposed to prolonged space flight
N81-32831
Effect of sex hormones on some parameters of carbohydrate metabolism in the lungs of hypoxic rats
N81-33785
CARBON DIOXIDE
Effect of exercise on reactions to breathing a gas mixture with 5% carbon dioxide and 14% oxygen
N81-33781
CARDIAC VENTRICLES
Characterization of left ventricular mechanical function during arrhythmias with two dimensional echocardiography. I - Premature ventricular contractions
A81-49327
Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning
A81-49328
CARDIOGRAPHY
Study of apexphonocardiogram and carotid pulsation during short term hypoxia in a decompression chamber
A81-49955
CARDIOVASCULAR SYSTEM
Biological effects of high DC magnetic fields
[DE81-028904] N81-32848
Evaluation of the CNS and cardiovascular effects of prolonged exposure to bromotrifluromethane (CBrF3)
[NASA-CR-161078] N81-32853
Comparison of direct and indirect methods of measuring cardiac output
N81-33773
Effect of one day immersion on cardiorespiratory parameters of man during exercise
N81-33778
CATECHOLAMINE
States of catecholamines and enzymes of synthesis thereof in the adrenal medulla of rats after flight aboard Cosmos-936 biosatellite
N81-33792
CATHETERIZATION
Subcutaneousy implanted connector to record arterial pressure and make electrical contact
N81-33799
CELLS (BIOLOGY)
Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies
[IAF PAPER 81-165] A81-47384
CENTRAL NERVOUS SYSTEM
Evaluation of the CNS and cardiovascular effects of prolonged exposure to bromotrifluromethane (CBrF3)
[NASA-CR-161078] N81-32853
The neuronal pool as a function unit in the Central Nervous System (CNS)
[TRITA-NA-8009] N81-32859
CENTRIFUGES
Biocentrifuge system capable of exchanging specimen cages while in operational mode
[NASA-CASE-MFS-23825-1] N81-32829
CHEMICAL EVOLUTION
Origin of life between Scylla and Charybdis --- computerized simulation of primordial chemical evolution
A81-48725
CHEMICAL REACTIONS
Log-linear regression method used to assess quality of air samples in fluoroplastic containers
N81-33796
CHINESE PEOPLES REPUBLIC
Chinese Medical Journal. Volume 94, number 4, April 1981
[PB81-204752] N81-32861
CHOLESTEROL
Prognostic value of blood cholesterol level in healthy subjects
N81-33780
Effect of chronic Gamma irradiation on protein composition and cholesterol content of canine blood
N81-33786
CIRCADIAN RHYTHMS
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] N81-32857
CIRCULATORY SYSTEM
Effect of lower body negative pressure (Chibis garment) and local negative pressure on central circulation in healthy man
N81-33775
CITIES
The University of Akron urban air pollution and human health study
[PB81-213282] N81-33811
CLINICAL MEDICINE
Algorithms for the clinical analysis of nystagmus eye movements
A81-47673
The pharmocological analysis of the stress mechanism and its consequences --- Russian book
A81-49474
CLOSED ECOLOGICAL SYSTEMS
Closed ecosystems as the means for the outer space exploration by man /Experimental results, perspectives/
[IAF PAPER 81-164] A81-47383
COCKPITS
Physiological aspects of heat exposure as applied to flying
A81-49957
COGNITION
Aggregation bias in estimates of perceptual agreement
[AD-A102726] N81-32864

COGNITIVE PSYCHOLOGY
Selected research publications in cognitive science by Rand staff: 1979-1980 [AD-A103311] N81-33817

COLD TOLERANCE
Norepinephrine turnover in lung - Effect of cold pressure and chronic hypoxia A81-48074

COLLIMATORS
A new CT collimator for producing two simultaneous overlapping slices from one scan --- for biomedical applications A81-47675

COLOR VISION
Pilot performance as a function of peripheral cues and color in computer generated images A81-48362

COMFORT
Evaluations of a modified crew seat for the Iroquois [ARL/APP-REPT-80] N81-32865

COMMAND AND CONTROL
Computer-based simulations for man-computer system design --- for aircraft weapon systems A81-48374

COMMONALITY (EQUIPMENT)
Analytic derivation of training transfer effectiveness ratios /TERs/ for new training systems --- for Navy pilots A81-48360

COMPENSATORY TRACKING
A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task A81-48006
Experimental studies on the estimation of the dynamic characteristics of the human operator A81-48189

COMPOSITION (PROPERTY)
Prognostic value of blood cholesterol level in healthy subjects N81-33780

COMPUTER GRAPHICS
Pilot performance as a function of peripheral cues and color in computer generated images A81-48362

COMPUTER SYSTEMS DESIGN
The development and utilization of integrated multidimensional displays [AD-A103170] N81-33823

COMPUTER TECHNIQUES
Computer use for automatic measurement of some physiological parameters N81-33794

COMPUTERIZED SIMULATION
Computer controlled electronic warfare simulation for tactical operator training A81-48363
Computer-based simulations for man-computer system design --- for aircraft weapon systems A81-48374
Real time simulation of OAS Phase I controls and displays --- Offensive Avionics System from human engineering standpoint A81-48375
Origin of life between Scylla and Charybdis --- computerized simulation of primordial chemical evolution A81-48725
Man-machine simulations in industrial systems. Volume 1: Narrative [DE81-027882] N81-32868

CONCENTRATION (COMPOSITION)
Chemical characterization and toxicologic evaluation of airborne mixtures [AD-A102678] N81-32855
Effect of chronic Gamma irradiation on protein composition and cholesterol content of canine blood N81-33786

CONTROLLERS
Kinesthetic coupling between operator and remote manipulator A81-47986

CORNEA
Theoretical and observational analysis of individual ionizing particle effects in biological tissue [LBL-11147-REV] N81-32887

CORONARY ARTERY DISEASE
Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning A81-49328
A histopathological study of coronary arteries in aircrew fatalities during 1962-1978 A81-49951

COSMONAUTS
On increasing reliability of cosmonaut-operator's activity [IAF PAPER 81-255] A81-47427

COSMOS SATELLITES
Metabolic changes in the animals subjected to flight in the biosatellites 'Cosmos' [IAF PAPER 81-179] A81-47393

CRANIUM
Echoventriculometry used to study spinal fluid circulation during redistribution of fluids in a cranial direction N81-33777

CRITERIA
Criteria for adequate radiation control programs (X Ray): A report of task force 2A [PB81-197881] N81-32860

CUES
A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task A81-48006
Pilot performance as a function of peripheral cues and color in computer generated images A81-48362
Cues reduce direction uncertainty and enhance motion detection A81-49673

CUSHIONS
Development of improved SH-3 helicopter seat cushions [AD-A103404] N81-33822

CYTOLOGY
Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies [IAF PAPER 81-165] A81-47384

D

DATA ACQUISITION
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents [DE81-027655] N81-32857
Measuring sleep by wrist actigraph [AD-A103196] N81-33807

DATA BASES
Literature sources in toxicology: A survey [BLL-BLRDR-5542] N81-33814
An anthropometric data base for commercial design applications, phase 1 [PB81-211070] N81-33824

DATA PROCESSING
Computer use for automatic measurement of some physiological parameters N81-33794

DATA REDUCTION
A fast Walsh transform electrocardiogram data compression algorithm suitable for microprocessor implementation [AD-A104115] N81-33808

DECISION MAKING
Comprehension and analysis of information in text. 4: Decision and verification processes [AD-A102677] N81-32863

DECOMPOSITION
Effectiveness of decomposition of plant waste by microorganisms under aerobic conditions N81-33784

DEOXYRIBONUCLEIC ACID
Molecular basis of the mutagenic and lethal effects of ultraviolet irradiation [DE81-028535] N81-32849

DESIGN
An anthropometric data base for commercial design applications, phase 1 [PB81-211070] N81-33824

DESIGN ANALYSIS
The development and airborne testing of the PALE seat
[AD-A103663] N81-33821

DIGESTING
Study of digestive tract microflora of Soyuz-13 and Salyut-4 crews
N81-33783

DIGESTIVE SYSTEM
Sensitivity to antibiotics of lactobacilli from digestive tract of Soyuz-13 and Salyut-4 crew members
N81-33782

DIGITAL SYSTEMS
Measuring sleep by wrist actigraph
[AD-A103196] N81-33807

DIGITAL TO ANALOG CONVERTERS
ECG-converter --- normal television receiver interface
[BMFT-FB-T-80-111] N81-33810

DIRECT CURRENT
Biological effects of high DC magnetic fields
[DE81-028904] N81-32848

DISEASES
Space settlements - The medical perspective
A81-49868

DISPLAY DEVICES
The development and utilization of integrated multidimensional displays
[AD-A103170] N81-33823

DIURESIS
Osmoregulation and interstitial fluid pressure changes in humans during water immersion
A81-48075

DOGS
Method for attaching cerebral thermocouple wires to the dog's skull
N81-33800

DUMMIES
Anthropomorphic dummy positioning and repeatability measurements
[PB81-212367] N81-33825

DYNAMIC CHARACTERISTICS
Experimental studies on the estimation of the dynamic characteristics of the human operator
A81-48189

Effect of hypokinesia in head down position on man's equilibrium function
N81-33779

## E

EARTH ATMOSPHERE
Geomagnetic field - Its role in the evolution of life and intelligence on earth
A81-49917

ECHOCARDIOGRAPHY
Characterization of left ventricular mechanical function during arrhythmias with two dimensional echocardiography. I - Premature ventricular contractions
A81-49327

Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning
A81-49328

EDUCATION
Creation of learning kits
N81-32570

Teaching/learning principles
N81-32572

ELECTRIC FIELDS
Assessment of health impacts from electrical-power transmission lines
[UR-3490-2024] N81-32856

Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] N81-32857

ELECTRIC POWER TRANSMISSION
Assessment of health impacts from electrical-power transmission lines
[UR-3490-2024] N81-32856

ELECTROCARDIOGRAPHY
Cardiac arrhythmias in service personnel - An electrophysiologic evaluation
A81-49956

A Fast Walsh transform electrocardiogram data compression algorithm suitable for microprocessor implementation
[AD-A104115] N81-33808

ECG-converter --- normal television receiver interface
[BMFT-FB-T-80-111] N81-33810

ELECTROENCEPHALOGRAPHY
Measuring sleep by wrist actigraph
[AD-A103196] N81-33807

ELECTROMAGNETIC FIELDS
Tissue interaction with nonionizing electromagnetic fields
[DE81-027654] N81-32858

ELECTROMAGNETIC RADIATION
A comparative analysis of the biological effects of electromagnetic radiation. I - The nervous system
A81-47194

ELECTRONIC WARFARE
Computer controlled electronic warfare simulation for tactical operator training
A81-48363

ELECTROPHYSIOLOGY
Measuring sleep by wrist actigraph
[AD-A103196] N81-33807

ELONGATION
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 2: Bone elongation rate and bone mass in metaphysis of long bones
N81-32834

EMBRYOLOGY
Experiment K-313: Rat and quail ontogenesis
N81-32841

Simulated spaceflight effects on mating and pregnancy of rats
[NASA-TM-81326] N81-32852

EMERGENCIES
Field study determination of ventilatory requirements of men rapidly evacuating a space launch complex
[AD-A095532] N81-33820

ENDOCRINE SECRETIONS
States of catecholamines and enzymes of synthesis thereof in the adrenal medulla of rats after flight aboard Cosmos-936 biosatellite
N81-33792

ENDOCRINOLOGY
States of catecholamines and enzymes of synthesis thereof in the adrenal medulla of rats after flight aboard Cosmos-936 biosatellite
N81-33792

ENVIRONMENTAL CONTROL
Space Shuttle life support systems - A status report
[IAF PAPER 81-181] A81-47394

ENZYME ACTIVITY
Metabolic changes in the animals subjected to flight in the biosatellites 'Cosmos'
[IAF PAPER 81-179] A81-47393

ENZYMES
Molecular basis of the mutagenic and lethal effects of ultraviolet irradiation
[DE81-028535] N81-32849

States of catecholamines and enzymes of synthesis thereof in the adrenal medulla of rats after flight aboard Cosmos-936 biosatellite
N81-33792

EPITHELIUM
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc and copper
[DE81-029091] N81-32851

ERGOMETERS
Simple technique to evaluate on the ground the energetic expenditure of physical exercise carried out in weightlessness
[IAF PAPER 81-170] A81-47388

ESCHERICHIA
Effect of attenuated geomagnetic field on E. coli resistance to ultraviolet rays
N81-33785

EVACUATING (TRANSPORTATION)
Field study determination of ventilatory requirements of men rapidly evacuating a space launch complex
[AD-A095532] N81-33820

EXERCISE PHYSIOLOGY
Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning A81-49320
Effect of one day immersion on cardiorespiratory parameters of man during exercise N81-33778
Effect of exercise on reactions to breathing a gas mixture with 5% carbon dioxide and 14% oxygen N81-33781

EXOBIOLOGY
Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies [IAF PAPER 81-165] A81-47384
Experimental estimation of the functional possibilities of higher plants as medium regenerators in life support systems [IAF PAPER 81-169] A81-47387
Development of an Animal Holding Facility for Space Shuttle studies [IAF PAPER 81-171] A81-47389
Metabolic changes in the animals subjected to flight in the biosatellites 'Cosmos' [IAF PAPER 81-179] A81-47393
Recent progress in exobiology and planetary biology [IAF PAPER 81-308] A81-47447
Publications of the Exobiology Program for 1980: A special bibliography [NASA-TM-83808] N81-32869
USSR report: Space biology and aerospace medicine, volume 15, no. 4, July - August 1981 [JPRS-79085] N81-33771
Effect of attenuated geomagnetic field on E. coli resistance to ultraviolet rays N81-33789
Flour beetle reproduction and mutability in weightlessness (experiments aboard Salyut-6 orbital station) N81-33793
Method of testing white rat elevator response N81-33798

EXPERIMENTATION
Age-related changes in body and visceral weight of Wistar rats N81-33797

EXPOSURE
Evaluation of the CNS and cardiovascular effects of prolonged exposure to bromotrifluromethane (CBrF3) [NASA-CR-161078] N81-32853

EXTRATERRESTRIAL LIFE
Recent progress in exobiology and planetary biology [IAF PAPER 81-308] A81-47447
Publications of the Exobiology Program for 1980: A special bibliography [NASA-TM-83808] N81-32869

EXTRAVEHICULAR ACTIVITY
Space Shuttle life support systems - A status report [IAF PAPER 81-181] A81-47394

F

FALLING
Method of testing white rat elevator response N81-33798

FEEDBACK CONTROL
Analysis of man-in-the-loop control systems in the presence of nonlinearities [AD-A102574] N81-32867

FERTILIZATION
Experiment K-313: Rat and quail ontogenesis N81-32841

FIGHTER AIRCRAFT
Effects of thermal stress on psychological functions and performance A81-49958
Field studies of heat stress in fighter operations in Assam Valley A81-49961
Thermal stress in high speed low level flying A81-49962

FIRE EXTINGUISHERS
Evaluation of the CNS and cardiovascular effects of prolonged exposure to bromotrifluromethane (CBrF3) [NASA-CR-161078] N81-32853

FLIGHT CREWS
Development of a multi-media crew-training program for the Terminal Configured Vehicle Mission Simulator A81-48361
A histopathological study of coronary arteries in aircrew fatalities during 1962-1978 A81-49951
Effects of thermal stress on psychological functions and performance A81-49958
Field studies of heat stress in fighter operations in Assam Valley A81-49961
Study of digestive tract microflora of Soyuz-13 and Salyut-4 crews N81-33783
Development of improved SH-3 helicopter seat cushions [AD-A103484] N81-33822

FLIGHT FITNESS
Aeromedical evaluation of aircrew with lower limb disabilities A81-49954

FLIGHT SIMULATION
Simulated spaceflight effects on mating and pregnancy of rats [NASA-TM-81326] N81-32852

FLIGHT SIMULATORS
Development of a multi-media crew-training program for the Terminal Configured Vehicle Mission Simulator A81-48361
Pilot performance as a function of peripheral cues and color in computer generated images A81-48362
Biocentrifuge system capable of exchanging specimen cages while in operational mode [NASA-CASE-MFS-23825-1] N81-32829

FLIGHT STRESS (BIOLOGY)
Medical considerations for manned interstellar flight A81-49918
Backache in helicopter pilots A81-49953
Physiological aspects of heat exposure as applied to flying A81-49957
Effects of thermal stress on psychological functions and performance A81-49958
Field studies of heat stress in fighter operations in Assam Valley A81-49961
Thermal stress in high speed low level flying A81-49962

FLIGHT TRAINING
Applications of advanced experimental methods to visual technology research simulator studies: Supplemental techniques [AD-A095633] N81-33815

FLOW DISTRIBUTION
Echoventriculometry used to study spinal fluid circulation during redistribution of fluids in a cranial direction N81-33777

FLOW MEASUREMENT
Comparison of direct and indirect methods of measuring cardiac output N81-33773

FOULING
A comparison of possible methods for marine fouling assessment during raft trials [MRL-R-808] N81-33769

FREE RADICALS
Effects of ethidium bromide on development and aging of Drosophila - Implications for the free radical theory of aging A81-48056

FREQUENCY MEASUREMENT
A comparison of possible methods for marine fouling assessment during raft trials [MRL-R-808] N81-33769

FREQUENCY RESPONSE
The use of ultrasonic spectroscopy to characterize calcified lesions A81-47847

Variations in response to whole-body vibration - Intensity dependent effects
A81-48500

G

GAMMA RAYS
Effect of chronic Gamma irradiation on protein composition and cholesterol content of canine blood
N81-33786

GAS ANALYSIS
Log-linear regression method used to assess quality of air samples in fluoroplastic containers
N81-33796

GAS BAGS
Log-linear regression method used to assess quality of air samples in fluoroplastic containers
N81-33796

GAS MIXTURES
Effect of exercise on reactions to breathing a gas mixture with 5% carbon dioxide and 14% oxygen
N81-33781

GASTROINTESTINAL SYSTEM
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc and copper
[DE81-029091] N81-32851

GENETICS
Molecular basis of the mutagenic and lethal effects of ultraviolet irradiation
[DE81-028535] N81-32849

GEOMAGNETISM
Geomagnetic field - Its role in the evolution of life and intelligence on earth
A81-49917
Effect of attenuated geomagnetic field on E. coli resistance to ultraviolet rays
N81-33789

GRAVITATIONAL EFFECTS
Space settlements - The medical perspective
A81-48868

GROUND TRUTH
Teaching/learning principles
N81-32572

GROUP DYNAMICS
Aggregation bias in estimates of perceptual agreement
[AD-A102726] N81-32864

GROWTH
Experiment K-310: The effect of spaceflight on osteogenesis and dentinogenesis in the mandibles of rats
N81-32839

H

HEALTH PHYSICS
Human engineering evaluation of the hyperbaric research facility
[AD-A103681] N81-33806
The University of Akron urban air pollution and human health study
[PB81-213282] N81-33811

HEART FUNCTION
Characterization of left ventricular mechanical function during arrhythmias with two dimensional echocardiography. I - Premature ventricular contractions
A81-49327
Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning
A81-49328

HEAT TOLERANCE
Evaluation of thermal strain index for assessment of tolerance to heat stress
A81-49959
Field studies of heat stress in fighter operations in Assam Valley
A81-49961

HEAVY IONS
Theoretical and observational analysis of individual ionizing particle effects in biological tissue
[LBL-11147-REV] N81-32847

HELICOPTER DESIGN
Backache in helicopter pilots
A81-49953

HELICOPTERS
Development of improved SH-3 helicopter seat cushions
[AD-A103484] N81-33022

HEMODYNAMIC RESPONSES
Linear discriminant function used to assess cosmonaut reaction to LBNP
N81-33772
Comparison of direct and indirect methods of measuring cardiac output
N81-33773
Computer use for automatic measurement of some physiological parameters
N81-33794

HEMODYNAMICS
Biological flows
[DGLR PAPER 81-001] A81-47574

HEMOGLOBIN
Effect of hypoxia on affinity of hemoglobin for oxygen in animals
N81-33802

HIGH ALTITUDE BREATHING
Oxygen provision to humans under conditions of high-altitude flight
A81-47150

HIGH TEMPERATURE ENVIRONMENTS
Physiological aspects of heat exposure as applied to flying
A81-49957
Effects of thermal stress on psychological functions and performance
A81-49958
Microenvironmental protection in military flying --- liquid cooled suits for high temperatures
A81-49960
Field studies of heat stress in fighter operations in Assam Valley
A81-49961
Thermal stress in high speed low level flying
A81-49962

HISTOLOGY
A histopathological study of coronary arteries in aircrew fatalities during 1962-1978
A81-49951

HORMONES
Effect of sex hormones on some parameters of carbohydrate metabolism in the lungs of hypoxic rats
N81-33785

HUMAN BEHAVIOR
Organizational behavior --- bibliographies
[AD-A103625] N81-33819

HUMAN BODY
Variations in response to whole-body vibration - Intensity dependent effects
A81-48500

HUMAN FACTORS ENGINEERING
On increasing reliability of cosmonaut-operator's activity
[IAF PAPER 81-255] A81-47427
Kinesthetic coupling between operator and remote manipulator
A81-47986
Computer-based simulations for man-computer system design --- for aircraft weapon systems
A81-48374
Real time simulation of OAS Phase I controls and displays --- Offensive Avionics System from human engineering standpoint
A81-48375
Systems engineering models of human-machine interaction --- Book
A81-49885
Backache in helicopter pilots
A81-49953
Aeromedical evaluation of aircrew with lower limb disabilities
A81-49954
Evaluations of a modified crew seat for the Iroquois
[ARL/APP-REPT-80] N81-32865
Man-machine simulations in industrial systems. Volume 1: Narrative
[DE81-027882] N81-32868
Human engineering evaluation of the hyperbaric research facility
[AD-A103681] N81-33806

Applications of advanced experimental methods to visual technology research simulator studies: Supplemental techniques
[AD-A095633] N81-33815
Advanced computer image generation techniques exploiting perceptual characteristics
[AD-A103365] N81-33818
Anthropomorphic dummy positioning and repeatability measurements
[PB81-212367] N81-33825

HUMAN PATHOLOGY
Biological flows
[DGLR PAPER 81-001] A81-47574
A histopathological study of coronary arteries in aircrew fatalities during 1962-1978
A81-49951
Cardiac arrhythmias in service personnel - An electrophysiologic evaluation
A81-49956
Evaluation of thermal strain index for assessment of tolerance to heat stress
A81-49959

HUMAN PERFORMANCE
Efficiency of human visual signal discrimination
A81-48225
Cues reduce direction uncertainty and enhance motion detection
A81-49673
Aggregation bias in estimates of perceptual agreement
[AD-A102726] N81-32864
Analysis of man-in-the-loop control systems in the presence of nonlinearities
[AD-A102574] N81-32867

HUMAN REACTIONS
A comparative analysis of the biological effects of electromagnetic radiation. I - The nervous system
A81-47194
Antiorthostatic hypokinesia as a means of simulating weightlessness
[IAF PAPER 81-178] A81-47392
Effects of microwave irradiation on human blood platelets
A81-47674
Osmoregulation and interstitial fluid pressure changes in humans during water immersion
A81-48075
Variations in response to whole-body vibration - Intensity dependent effects
A81-48500

HUMAN TOLERANCES
Oxygen provision to humans under conditions of high-altitude flight
A81-47150
Human engineering evaluation of the hyperbaric research facility
[AD-A103681] N81-33806

HYGROSCOPICITY
Aerosol factors affecting respiratory deposition
[DE81-024425] N81-33809

HYPERBARIC CHAMBERS
Human engineering evaluation of the hyperbaric research facility
[AD-A103681] N81-33806

HYPERCAPNIA
Method for evaluating respiratory system reaction to increasing hypercapnia
N81-33795
Method for evaluating respiratory system reaction to increasing hypercapnia
N81-33801

HYPOKINESIA
Antiorthostatic hypokinesia as a means of simulating weightlessness
[IAF PAPER 81-178] A81-47392
Effect of hypokinesia in head down position on man's equilibrium function
N81-33779
Changes in rabbit immunoreactivity as related to duration of hypokinesia
N81-33803

HYPOXIA
Norepinephrine turnover in lung - Effect of cold pressure and chronic hypoxia
A81-48074
Study of apexphonocardiograms and carotid pulsation during short term hypoxia in a decompression chamber
A81-49955
Effect of sex hormones on some parameters of carbohydrate metabolism in the lungs of hypoxic rats
N81-33785
Effect of hypoxia on affinity of hemoglobin for oxygen in animals
N81-33802

I

IMAGE PROCESSING
Advanced computer image generation techniques exploiting perceptual characteristics
[AD-A103365] N81-33818

IMMUNITY
Changes in rabbit immunoreactivity as related to duration of hypokinesia
N81-33803

IMPLANTATION
Experiment K-313: Rat and quail ontogenesis
N81-32841

IMPLANTED ELECTRODES (BIOLOGY)
Subcutaneously implanted connector to record arterial pressure and make electrical contact
N81-33799
Method for attaching cerebral thermocouple wires to the dog's skull
N81-33800

INFORMATION THEORY
Comparative study of methods of identification of models of human regulators
[ILR-46] N81-32854

INTELLIGENCE
Geomagnetic field - Its role in the evolution of life and intelligence on earth
A81-49917

INTERACTIVE CONTROL
Systems engineering models of human-machine interaction --- Book
A81-49885

INTERCRANIAL CIRCULATION
Echoventriculometry used to study spinal fluid circulation during redistribution of fluids in a cranial direction
N81-33777

INTERSTELLAR TRAVEL
Medical considerations for manned interstellar flight
A81-49916

J

JOINTS (ANATOMY)
Experiment K-314: Fetal and neonatal rat bone and joint development following in Utero spaceflight
N81-32842

K

KIDNEY DISEASES
Toxicology and metabolism of nickel compounds
[DE81-020924] N81-32850

L

LEARNING
Teaching/learning principles
N81-32572

LEG (ANATOMY)
Aeromedical evaluation of aircrew with lower limb disabilities
A81-49954
Effect of negative pressure and occlusion cuffs on intravascular pressure in legs of healthy man
N81-33774

LESIONS
The use of ultrasonic spectroscopy to characterize calcified lesions
A81-47047

LIFE CYCLE COSTS
Development of improved SH-3 helicopter seat cushions
[AD-A103484] N81-33822

LIFE SCIENCES
Development of an Animal Holding Facility for Space Shuttle studies
[IAF PAPER 81-171] A81-47388
The evolutionary development of vertebrate thermoregulation
A81-48119
LIFE SPAN
Effects of ethidium bromide on development and aging of Drosophila - Implications for the free radical theory of aging
A81-48056
LIFE SUPPORT SYSTEMS
Oxygen provision to humans under conditions of high-altitude flight
A81-47150
Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies
[IAF PAPER 81-165] A81-47384
Advanced life support - Orbital work base
[IAF PAPER 81-166] A81-47385
Life support system development in West Germany
[IAF PAPER 81-167] A81-47386
Experimental estimation of the functional possibilities of higher plants as medium regenerators in life support systems
[IAF PAPER 81-169] A81-47387
Space Shuttle life support systems - A status report
[IAF PAPER 81-181] A81-47394
LIPID METABOLISM
Experiment K304: Studies of specific hepatic enzymes and liver constituents involved in the conversion of carbohydrates to lipids in rats exposed to prolonged space flight
N81-32831
LIQUID COOLING
Microenvironmental protection in military flying --- liquid cooled suits for high temperatures
A81-49960
LONG DURATION SPACE FLIGHT
Closed ecosystems as the means for the outer space exploration by man /Experimental results, perspectives/
[IAF PAPER 81-164] A81-47383
Life support system development in West Germany
[IAF PAPER 81-167] A81-47386
LOW FREQUENCIES
Tissue interaction with nonionizing electromagnetic fields
[DE81-027654] N81-32858
LOWER BODY NEGATIVE PRESSURE
USSR report: Space biology and aerospace medicine, volume 15, no. 4, July - August 1981
[JPRS-79085] N81-33771
Linear discriminant function used to assess cosmonaut reaction to LBNP
N81-33772
Effect of negative pressure and occlusion cuffs on intravascular pressure in legs of healthy man
N81-33774
Effect of lower body negative pressure (Chibis garment) and local negative pressure on central circulation in healthy man
N81-33775
LUNGS
Norepinephrine turnover in lung - Effect of cold pressure and chronic hypoxia
A81-48074
Effect of sex hormones on some parameters of carbohydrate metabolism in the lungs of hypoxic rats
N81-33785

M

MAGNETIC FIELDS
Biological effects of high DC magnetic fields
[DE81-028904] N81-32848
Effect of stationary magnetic field on the thyroid
N81-33787
MALES
Effect of negative pressure and occlusion cuffs on intravascular pressure in legs of healthy man
N81-33774
Effect of lower body negative pressure (Chibis garment) and local negative pressure on central circulation in healthy man
N81-33775

Effect of one day immersion on cardiorespiratory parameters of man during exercise
N81-33778
MAMMALS
Scaling of metabolic rate on body mass in small laboratory mammals
A81-47894
MAN MACHINE SYSTEMS
Kinesthetic coupling between operator and remote manipulator
A81-47986
A novel design for a robot arm
A81-47990
Experimental studies on the estimation of the dynamic characteristics of the human operator
A81-48189
Computer-based simulations for man-computer system design --- for aircraft weapon systems
A81-48374
Systems engineering models of human-machine interaction --- Book
A81-49865
Comparative study of methods of identification of models of human regulators
[ILR-46] N81-32854
Man-machine simulations in industrial systems. Volume 1: Narrative
[DE81-027882] N81-32868
Effect of different runway size on pilot performance during simulated night landing approaches
[AD-A103190] N81-33816
The development and airborne testing of the PALE seat
[AD-A103663] N81-33821
The development and utilization of integrated multidimensional displays
[AD-A103170] N81-33823
MANIPULATORS
The application of robotic sensors - A survey and assessment
A81-47982
A novel design for a robot arm
A81-47990
MANNED SPACE FLIGHT
Italy's contribution, from a medical standpoint, to the space safety of payload scientists, and perspectives for the future
[IAF PAPER 81-250] A81-47424
On increasing reliability of cosmonaut-operator's activity
[IAF PAPER 81-255] A81-47427
Medical considerations for manned interstellar flight
A81-49918
MANUAL CONTROL
Experimental studies on the estimation of the dynamic characteristics of the human operator
A81-48189
MARINE BIOLOGY
A comparison of possible methods for marine fouling assessment during raft trials
[MRL-R-808] N81-33769
MARINE CHEMISTRY
A comparison of possible methods for marine fouling assessment during raft trials
[MRL-R-808] N81-33769
MASS
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 2: Bone elongation rate and bone mass in metaphysis of long bones
N81-32834
MASTICATION
Experiment K-310: The effect of space flight on osteogenesis and dentinogenesis in the mandible of rats. Supplement 1: The effects of space flight on alveolar bone modeling and remodeling in the rat mandible
N81-32840
MATHEMATICAL MODELS
Systems engineering models of human-machine interaction --- Book
A81-49865
Comparative study of methods of identification of models of human regulators
[ILR-46] N81-32854

MEDICAL EQUIPMENT
  Measuring sleep by wrist actigraph [AD-A103196] N81-33807
MEDICAL PHENOMENA
  Human engineering evaluation of the hyperbaric research facility [AD-A103681] N81-33806
MEDICAL SCIENCE
  Chinese Medical Journal. Volume 94, number 4, April 1981 [PB81-204752] N81-32861
MEMORY
  Comprehension and analysis of information in text. 4: Decision and verification processes [AD-A102677] N81-32863
METABOLISM
  Scaling of metabolic rate on body mass in small laboratory mammals A81-47894
  Toxicology and metabolism of nickel compounds [DE81-028924] N81-32850
METAL IONS
  Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc and copper [DE81-029091] N81-32851
MICROORGANISMS
  Study of digestive tract microflora of Soyuz-13 and Salyut-4 crews N81-33783
  Effectiveness of decomposition of plant waste by microorganisms under aerobic conditions N81-33784
MICROWAVE EMISSION
  Procedures for evaluating nonperturbing temperature probes in microwave fields [PB81-205082] N81-33813
MICROWAVE FREQUENCIES
  Effects of microwave irradiation on human blood platelets A81-47674
MILITARY AIRCRAFT
  Microenvironmental protection in military flying --- liquid cooled suits for high temperatures A81-49960
MILITARY OPERATIONS
  Computer controlled electronic warfare simulation for tactical operator training A81-48363
MILITARY TECHNOLOGY
  Real time simulation of OAS Phase I controls and displays --- Offensive Avionics System from human engineering standpoint A81-48375
MORPHOLOGY
  Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight N81-32830
MOTION PERCEPTION
  Moving and the motion after-effect A81-47665
  A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task A81-48006
  Cues reduce direction uncertainty and enhance motion detection A81-49673
MOTION SICKNESS DRUGS
  Relative efficacy of the proposed Space Shuttle antimotion sickness medications [IAF PAPER 81-177] A81-47391
MOTION SIMULATORS
  A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task A81-48006
MUCOUS
  Experiment K-315: Studies of the nasal mucosa N81-32843
MUSCLES
  Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight N81-32830
  Effect of flight aboard Cosmos-936 biosatellite on contractile properties of rat muscle fibers N81-33790
MUSCULAR FUNCTION
  Effect of flight aboard Cosmos-936 biosatellite on contractile properties of rat muscle fibers N81-33790
MUTATIONS
  Origin of life between Scylla and Charybdis --- computerized simulation of primordial chemical evolution A81-48725
  Molecular basis of the mutagenic and lethal effects of ultraviolet irradiation [DE81-020535] N81-32849
  Flour beetle reproduction and mutability in weightlessness (experiments aboard Salyut-6 orbital station) N81-33793

N

NERVOUS SYSTEM
  A comparative analysis of the biological effects of electromagnetic radiation. I - The nervous system A81-47194
NEURAL NETS
  The neuronal pool as a function unit in the Central Nervous System (CNS) [TRITA-NA-8009] N81-32859
NEURONS
  The neuronal pool as a function unit in the Central Nervous System (CNS) [TRITA-NA-8009] N81-32859
NEUROPHYSIOLOGY
  Determination of otolith afferent response parameters using small amplitude sinusoidal roll and pitch tilts A81-47672
NICKEL COMPOUNDS
  Toxicology and metabolism of nickel compounds [DE81-028924] N81-32850
NIGHT FLIGHTS (AIRCRAFT)
  Effect of different runway size on pilot performance during simulated night landing approaches [AD-A103190] N81-33816
NONDESTRUCTIVE TESTS
  The use of ultrasonic spectroscopy to characterize calcified lesions A81-47847
NONLINEARITY
  Analysis of man-in-the-loop control systems in the presence of nonlinearities [AD-A102574] N81-32867
NONUNIFORM MAGNETIC FIELDS
  Mechanism of adrenosympathetic system reaction to single exposure to variable magnetic field N81-33788
NOREPINEPHRINE
  Norepinephrine turnover in lung - Effect of cold pressure and chronic hypoxia A81-48078
NOSE (ANATOMY)
  Experiment K-315: Studies of the nasal mucosa N81-32843
NUCLEOTIDES
  Origin of life between Scylla and Charybdis --- computerized simulation of primordial chemical evolution A81-48725
NUTRITIONAL REQUIREMENTS
  Use of nutrients to correct the adrenocortical system --- acceleration stresses (physiology) N81-33776
NYSTAGMUS
  Algorithms for the clinical analysis of nystagmus eye movements A81-47673

O

OCCLUSION
  Effect of negative pressure and occlusion cuffs on intravascular pressure in legs of healthy man N81-33774
OHIO
  The University of Akron urban air pollution and human health study [PB81-213282] N81-33811

OPERATIONS RESEARCH
Organizational behavior --- bibliographies
[AD-A103625] N81-33819
OPERATOR PERFORMANCE
Experimental studies on the estimation of the dynamic characteristics of the human operator
A81-48109
Development of a search task for the measurement of peripheral visual acuity
A81-46889
OPERATORS (PERSONNEL)
Kinesthetic coupling between operator and remote manipulator
A81-47986
Man-machine simulations in industrial systems. Volume 1: Narrative
[DE81-027882] N81-32868
ORBITAL SPACE STATIONS
Advanced life support - Orbital work base
[IAF PAPER 81-166] A81-47385
ORBITAL WORKSHOPS
Advanced life support - Orbital work base
[IAF PAPER 81-166] A81-47385
ORGANIZATIONS
Organizational behavior --- bibliographies
[AD-A103625] N81-33819
ORGANS
Age-related changes in body and visceral weight of Wistar rats
N81-33797
ORTHOPEDICS
Aeromedical evaluation of aircrew with lower limb disabilities
A81-49956
ORTHOSTATIC TOLERANCE
Effect of hypokinesia in head down position on man's equilibrium function
N81-33779
OSMOSIS
Osmoregulation and interstitial fluid pressure changes in humans during water immersion
A81-48075
OTOLITH ORGANS
Determination of otolith afferent response parameters using small amplitude sinusoidal roll and pitch tilts
A81-47672
OXYGEN
Effect of exercise on reactions to breathing a gas mixture with 5% carbon dioxide and 14% oxygen
N81-33781
Effect of hypoxia on affinity of hemoglobin for oxygen in animals
N81-33802
OXYGEN BREATHING
Extravehicular Crewman Work System (ECWS) study program: Prebreathe elimination study
[NASA-CR-167390] N81-32866
OXYGEN METABOLISM
Geomagnetic field - Its role in the evolution of life and intelligence on earth
A81-49917
OXYGEN SUPPLY EQUIPMENT
Oxygen provision to humans under conditions of high-altitude flight
A81-47150
OXYGENATION
Effect of hypoxia on affinity of hemoglobin for oxygen in animals
N81-33802
OZONE
Geomagnetic field - Its role in the evolution of life and intelligence on earth
A81-49917

P

PANEL METHOD (FLUID DYNAMICS)
A comparison of possible methods for marine fouling assessment during raft trials
[ARL-R-808] N81-33769
PARAMETER IDENTIFICATION
Comparative study of methods of identification of models of human regulators
[ILR-48] N81-32854
PATHOGENESIS
Toxicology and metabolism of nickel compounds
[DE81-028924] N81-32850
PERCEPTION
Comprehension and analysis of information in text. 4: Decision and verification processes
[AD-A102677] N81-32863
PERFORMANCE TESTS
Space Shuttle life support systems - A status report
[IAF PAPER 81-181] A81-47394
Pilot performance as a function of peripheral cues and color in computer generated images
A81-48362
Cues reduce direction uncertainty and enhance motion detection
A81-49673
PERIODICALS
Chinese Medical Journal. Volume 94, number 4, April 1981
[PB81-204782] N81-32861
PERSONNEL
An anthropometric data base for commercial design applications, phase 1
[PB81-211070] N81-33824
PERSONNEL MANAGEMENT
Organizational behavior --- bibliographies
[AD-A103625] N81-33819
PERSONNEL SELECTION
Italy's contribution, from a medical standpoint, to the space safety of payload scientists, and perspectives for the future
[IAF PAPER 81-250] A81-47424
PERTURBATION
Procedures for evaluating nonperturbing temperature probes in microwave fields
[PB81-205682] N81-33812
PETROLEUM PRODUCTS
Chemical characterization and toxicologic evaluation of airborne mixtures
[AD-A102678] N81-32855
PHARMACOLOGY
The pharmocological analysis of the stress mechanism and its consequences --- Russian book
A81-49470
PHOTOINTERPRETATION
Creation of learning kits
N81-32570
Teaching/learning principles
N81-32572
PHOTORECEPTORS
Primary events in vision
[AD-A095369] N81-33805
PHOTOSYNTHESIS
Closed ecosystems as the means for the outer space exploration by man /Experimental results, perspectives/
[IAF PAPER 81-164] A81-47383
PHYSICAL EXERCISE
Simple technique to evaluate on the ground the energetic expenditure of physical exercise carried out in weightlessness
[IAF PAPER 81-170] A81-47388
Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning
A81-49328
PHYSIOLOGICAL EFFECTS
A comparative analysis of the biological effects of electromagnetic radiation. I - The nervous system
A81-47194
Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach
[IAF PAPER 81-175] A81-47390
Antiorthostatic hypokinesia as a means of simulating weightlessness
[IAF PAPER 81-178] A81-47392
US rat experiments flown on the Soviet satellite Cosmos 1129
[NASA-TM-81289] N81-32830
Experiment K304: Studies of specific hepatic enzymes and liver constituents involved in the conversion of carbohydrates to lipids in rats exposed to prolonged space flight
N81-32831
Experiment K305: Quantitative analysis of selected bone parameters
N81-32832

Experiment K305: Quantitative analysis of selected bone parameters. Supplement 1: Effects of weightlessness on osteoblast differentiation in rat molar periodontium
N81-32833
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 2: Bone elongation rate and bone mass in metaphysis of long bones
N81-32834
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3A: Trabecular spacing and orientation in the long bones
N81-32835
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3B: Mineralization in the long bones
N81-32836
Experiment K307: Vertebral body strength of rat spinal columns
N81-32837
Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight
N81-32838
Experiment K-310: The effect of spaceflight on osteogenesis and dentinogenesis in the mandibles of rats
N81-32839
Experiment K-310: The effect of space flight on osteogenesis and dentinogenesis in the mandible of rats. Supplement 1: The effects of space flight on alveolar bone modeling and remodeling in the rat mandible
N81-32840
Experiment K-313: Rat and quail ontogenesis
N81-32841
Experiment K-314: Fetal and neonatal rat bone and joint development following in Utero spaceflight
N81-32842
Experiment K-315: Studies of the nasal mucosa
N81-32843
Experiment K-316: Effects of weightlessness on body composition in the rat
N81-32844
Experiment K-317: Bone resorption in rats during spaceflight
N81-32845
Biological effects of high DC magnetic fields
[DE81-028904] N81-32848
Chemical characterization and toxicologic evaluation of airborne mixtures
[AD-A102678] N81-32855
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] N81-32857
Evaluation of short-term bioassays to predict functional impairment, development of neurobehavioral bioassays in laboratory animals, directory of institutions/individuals
[AD-A104225] N81-33770
USSR report: Space biology and aerospace medicine, volume 15, no. 4, July - August 1981
[JPRS-79085] N81-33771
Effect of one day immersion on cardiorespiratory parameters of man during exercise
N81-33778
Effect of stationary magnetic field on the thyroid
N81-33787
Effect of hypoxia on affinity of hemoglobin for oxygen in animals
N81-33802
Changes in rabbit immunoreactivity as related to duration of hypokinesia
N81-33803
Aerosol factors affecting respiratory deposition
[DE81-024425] N81-33809
PHYSIOLOGICAL RESPONSES
Oxygen provision to humans under conditions of high-altitude flight
A81-47150
Determination of otolith afferent response parameters using small amplitude sinusoidal roll and pitch tilts
A81-47672
Variations in response to whole-body vibration - Intensity dependent effects
A81-[illegible]
Space settlements - The medical perspective
A81-[illegible]
The pharmacological analysis of the stress mechanism and its consequences --- Russian book
A81-49470
Physiological aspects of heat exposure as applied to flying
A81-49957
Effects of thermal stress on psychological functions and performance
A81-49958
Evaluation of thermal strain index for assessment of tolerance to heat stress
A81-49959
Method for evaluating respiratory system reaction to increasing hypercapnia
N81-33788
Method of testing white rat elevator response
N81-33790
Method for evaluating respiratory system reaction to increasing hypercapnia
N81-33801
PHYSIOLOGICAL TESTS
Simple technique to evaluate on the ground the energetic expenditure of physical exercise carried out in weightlessness
[IAF PAPER 81-170] A81-47300
Italy's contribution, from a medical standpoint, to the space safety of payload scientists, and perspectives for the future
[IAF PAPER 81-250] A81-47424
Scaling of metabolic rate on body mass in small laboratory mammals
A81-47894
Graduated dynamic and point system 'GRADEPS' for assessment of visual field contraction during +Gz acceleration
A81-49952
Study of apexphonocardiogram and carotid pulsation during short term hypoxia in a decompression chamber
A81-49955
Cardiac arrhythmias in service personnel - An electrophysiologic evaluation
A81-49956
PILOT PERFORMANCE
A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task
A81-48096
Pilot performance as a function of peripheral cues and color in computer generated images
A81-48362
Backache in helicopter pilots
A81-49953
Microenvironmental protection in military flying --- liquid cooled suits for high temperatures
A81-49960
PILOT TRAINING
Analytic derivation of training transfer effectiveness ratios /TERs/ for new training systems --- for Navy pilots
A81-48360
Development of a multi-media crew-training program for the Terminal Configured Vehicle Mission Simulator
A81-48361
PITCH (INCLINATION)
Determination of otolith afferent response parameters using small amplitude sinusoidal roll and pitch tilts
A81-47672
PLANETARY ATMOSPHERES
Spacecraft and stellar occultations by turbulent planetary atmospheres. A theoretical investigation of various wave propagation effects and their impact on derived profiles of refractivity, temperature and pressure
[AD-A103069] N81-32846
PLANTS (BOTANY)
Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies
[IAF PAPER 81-165] A81-47306

PLASTICS
Log-linear regression method used to assess quality of air samples in fluoroplastic containers
N81-33796

PLATELETS
Effects of microwave irradiation on human blood platelets
A81-47674

POLYVINYL CHLORIDE
Development of improved SH-3 helicopter seat cushions
[AD-A103484] N81-33822

POSITIONING
Anthropomorphic dummy positioning and repeatability measurements
[PB81-212367] N81-33825

POSTURE
Linear discriminant function used to assess cosmonaut reaction to LBNP
N81-33772

PREGNANCY
Experiment K-314: Fetal and neonatal rat bone and joint development following in Utero spaceflight
N81-32842
Simulated spaceflight effects on mating and pregnancy of rats
[NASA-TM-81326] N81-32852

PRESSURE MEASUREMENTS
Non-invasive method and apparatus for measuring pressure within a pliable vessel
[NASA-CASE-ARC-11264-1] N81-33804

PRESSURE REDUCTION
Extravehicular Crewman Work System (ECWS) study program: Prebreathe elimination study
[NASA-CR-167390] N81-32866

PRESSURE SENSORS
Non-invasive method and apparatus for measuring pressure within a pliable vessel
[NASA-CASE-ARC-11264-1] N81-33804

PROMETHAZINE
Relative efficacy of the proposed Space Shuttle antimotion sickness medications
[IAF PAPER 81-177] A81-47391

PROPRIOCEPTION
Kinesthetic coupling between operator and remote manipulator
A81-47986

PROTECTIVE CLOTHING
Microenvironmental protection in military flying --- liquid cooled suits for high temperatures
A81-45960

PROTEIN METABOLISM
Metabolic changes in the animals subjected to flight in the biosatellites 'Cosmos'
[IAF PAPER 81-179] A81-47393

PROTEINS
Effect of chronic Gamma irradiation on protein composition and cholesterol content of canine blood
N81-33786

PSYCHOLOGICAL EFFECTS
Medical considerations for manned interstellar flight
A81-49918

PSYCHOLOGICAL TESTS
Development of a search task for the measurement of peripheral visual acuity
A81-48499

PSYCHOMOTOR PERFORMANCE
Cues reduce direction uncertainty and enhance motion detection
A81-49673

PUBLIC HEALTH
Criteria for adequate radiation control programs (X Ray): A report of task force 2A
[PB81-197881] N81-32860

PULMONARY FUNCTIONS
Method for evaluating respiratory system reaction to increasing hypercapnia
N81-33795
Method for evaluating respiratory system reaction to increasing hypercapnia
N81-33801
The University of Akron urban air pollution and human health study
[PB81-213282] N81-33811
Effects of sulfuric acid mist exposure on pulmonary function
[PB81-208977] N81-33812

PURSUIT TRACKING
A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task
A81-48006
Experimental studies on the estimation of the dynamic characteristics of the human operator
A81-48189

R

RABBITS
Changes in rabbit immunoreactivity as related to duration of hypokinesia
N81-33803

RADIATION DETECTORS
Routine compliance testing for diagnostic X-ray systems
[PB81-201501] N81-32862

RADIATION DOSAGE
Criteria for adequate radiation control programs (X Ray): A report of task force 2A
[PB81-197881] N81-32860
Routine compliance testing for diagnostic X-ray systems
[PB81-201501] N81-32862
Effect of chronic Gamma irradiation on protein composition and cholesterol content of canine blood
N81-33786

RADIATION EFFECTS
A comparative analysis of the biological effects of electromagnetic radiation. I - The nervous system
A81-47194
Effects of microwave irradiation on human blood platelets
A81-47674
Medical considerations for manned interstellar flight
A81-49918
Theoretical and observational analysis of individual ionizing particle effects in biological tissue
[LBL-11147-REV] N81-32847
Effect of attenuated geomagnetic field on E. coli resistance to ultraviolet rays
N81-33789

RADIATION HAZARDS
Routine compliance testing for diagnostic X-ray systems
[PB81-201501] N81-32862

RADIO FREQUENCY INTERFERENCE
Procedures for evaluating nonperturbing temperature probes in microwave fields
[PB81-205882] N81-33813

RADIOBIOLOGY
Effects of microwave irradiation on human blood platelets
A81-47674

RADIOGRAPHY
Routine compliance testing for diagnostic X-ray systems
[PB81-201501] N81-32862

RATS
Chemical characterization and toxicologic evaluation of airborne mixtures
[AD-A102678] N81-32855
Age-related changes in body and visceral weight of Wistar rats
N81-33797
Method of testing white rat elevator response
N81-33798

READING
Comprehension and analysis of information in text. 4: Decision and verification processes
[AD-A102677] N81-32863

REFLEXES
Method of testing white rat elevator response
N81-33798

REGRESSION ANALYSIS
Log-linear regression method used to assess quality of air samples in fluoroplastic containers
N81-33796

RELIABILITY ENGINEERING
On increasing reliability of cosmonaut-operator's activity
[IAF PAPER 81-255] A81-47427

REMOTE MANIPULATOR SYSTEMS
Kinesthetic coupling between operator and remote manipulator
A81-47986
REMOTE SENSING
Teaching/learning principles
N81-32572
REPRODUCTION (BIOLOGY)
Flour beetle reproduction and mutability in weightlessness (experiments aboard Salyut-6 orbital station)
N81-33793
RESEARCH
Toxicology and metabolism of nickel compounds [DE81-028924] N81-32850
RESEARCH FACILITIES
Literature sources in toxicology: A survey [BLL-BLRDB-5542] N81-33814
RESPIRATION
Effect of exercise on reactions to breathing a gas mixture with 5% carbon dioxide and 14% oxygen N81-33781
RESPIRATORY PHYSIOLOGY
Effects of sulfuric acid mist exposure on pulmonary function [PB81-208977] N81-33812
RESPIRATORY RATE
Effects of ethidium bromide on development and aging of Drosophila - Implications for the free radical theory of aging
A81-48056
RESPIRATORY SYSTEM
Effect of one day immersion on cardiorespiratory parameters of man during exercise
N81-33778
Method for evaluating respiratory system reaction to increasing hypercapnia
N81-33795
Method for evaluating respiratory system reaction to increasing hypercapnia
N81-33801
Aerosol factors affecting respiratory deposition [DE81-024825] N81-33809
RESPONSE BIAS
Aggregation bias in estimates of perceptual agreement [AD-A102726] N81-32864
RETENTION (PSYCHOLOGY)
Comprehension and analysis of information in text. 4: Decision and verification processes [AD-A102677] N81-32863
RETINA
Primary events in vision [AD-A095369] N81-33805
RIBONUCLEIC ACIDS
Origin of life between Scylla and Charybdis --- computerized simulation of primordial chemical evolution
A81-46725
ROBOTS
The application of robotic sensors - A survey and assessment
A81-47982
Robotic actuators - A technology assessment
A81-47988
A novel design for a robot arm
A81-47990
ROLL
Determination of otolith afferent response parameters using small amplitude sinusoidal roll and pitch tilts
A81-47672
RUNWAY LIGHTS
Effect of different runway size on pilot performance during simulated night landing approaches [AD-A103190] N81-33816
RURAL AREAS
The University of Akron urban air pollution and human health study [PB81-213282] N81-33811

S

SAFETY FACTORS
Evaluations of a modified crew seat for the Iroquois [ARL/APP-REPT-80] N81-32865

Development of improved SH-3 helicopter seat cushions [AD-A103484] N81-33822
SALYUT SPACE STATION
Sensitivity to antibiotics of lactobacilli from digestive tract of Soyuz-13 and Salyut-4 crew members
N81-33782
Study of digestive tract microflora of Soyuz-13 and Salyut-4 crews
N81-33783
SCANNERS
A new CT collimator for producing two simultaneous overlapping slices from one scan --- for biomedical applications
A81-47675
SEARCHING
Development of a search task for the measurement of peripheral visual acuity
A81-48499
SEAT BELTS
Anthropomorphic dummy positioning and repeatability measurements [PB81-212367] N81-33825
SEATS
Backache in helicopter pilots
A81-49953
Evaluations of a modified crew seat for the Iroquois [ARL/APP-REPT-80] N81-32863
The development and airborne testing of the FALE seat [AD-A103663] N81-33821
Development of improved SH-3 helicopter seat cushions [AD-A103484] N81-33822
SELECTIVE DISSEMINATION OF INFORMATION
Selected research publications in cognitive science by Rand staff: 1979-1980 [AD-A103311] N81-33817
SENSORS
The application of robotic sensors - A survey and assessment
A81-47982
SEX GLANDS
Effect of sex hormones on some parameters of carbohydrate metabolism in the lungs of hypoxic rats
N81-33785
SITTING POSITION
The development and airborne testing of the FALE seat [AD-A103663] N81-33821
SKULL
Method for attaching cerebral thermocouple wires to the dog's skull
N81-33800
SKYLAB PROGRAM
Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach [IAF PAPER 81-175] A81-47390
SLEEP
Measuring sleep by wrist actigraph [AD-A103196] N81-33807
SMOKE
Chemical characterization and toxicologic evaluation of airborne mixtures [AD-A102678] N81-32855
SORPTION
Experiment K-317: Bone resorption in rats during spaceflight
N81-32845
SOYUZ SPACECRAFT
Sensitivity to antibiotics of lactobacilli from digestive tract of Soyuz-13 and Salyut-4 crew members
N81-33782
Study of digestive tract microflora of Soyuz-13 and Salyut-4 crews
N81-33783
SPACE COLONIES
Advanced life support - Orbital work base [IAF PAPER 81-166] A81-47385
Experimental estimation of the functional possibilities of higher plants as medium regenerators in life support systems [IAF PAPER 81-169] A81-47387
Space settlements - The medical perspective
A81-46868

SPACE FLIGHT STRESS
Relative efficacy of the proposed Space Shuttle antimotion sickness medications
[IAF PAPER 81-177] A81-47391
Metabolic changes in the animals subjected to flight in the biosatellites 'Cosmos'
[IAF PAPER 81-179] A81-47393
Simulated spaceflight effects on mating and pregnancy of rats
[NASA-TM-81326] N81-32852
SPACE SHUTTLE ORBITERS
Relative efficacy of the proposed Space Shuttle antimotion sickness medications
[IAF PAPER 81-177] A81-47391
Space Shuttle life support systems - A status report
[IAF PAPER 81-181] A81-47394
Extravehicular Crewman Work System (ECWS) study program: Prebreathe elimination study
[NASA-CR-167390] N81-32866
SPACE SHUTTLES
Development of an Animal Holding Facility for Space Shuttle studies
[IAF PAPER 81-171] A81-47389
SPACE SIMULATORS
Biocentrifuge system capable of exchanging specimen cages while in operational mode
[NASA-CASE-MFS-23825-1] N81-32829
SPACEBORNE EXPERIMENTS
Life support system development in West Germany
[IAF PAPER 81-167] A81-47386
Development of an Animal Holding Facility for Space Shuttle studies
[IAF PAPER 81-171] A81-47389
US rat experiments flown on the Soviet satellite Cosmos 1129
[NASA-TM-81289] N81-32830
Experiment K304: Studies of specific hepatic enzymes and liver constituents involved in the conversion of carbohydrates to lipids in rats exposed to prolonged space flight
N81-32831
Experiment K305: Quantitative analysis of selected bone parameters
N81-32832
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 1: Effects of weightlessness on osteoblast differentiation in rat molar periodontium
N81-32833
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 2: Bone elongation rate and bone mass in metaphysis of long bones
N81-32834
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3A: Trabecular spacing and orientation in the long bones
N81-32835
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3B: Mineralization in the long bones
N81-32836
Experiment K307: Vertebral body strength of rat spinal columns
N81-32837
Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight
N81-32838
Experiment K-310: The effect of spaceflight on osteogenesis and dentinogenesis in the mandibles of rats
N81-32839
Experiment K-310: The effect of space flight on osteogenesis and dentinogenesis in the mandible of rats. Supplement 1: The effects of space flight on alveolar bone modeling and remodeling in the rat mandible
N81-32840
Experiment K-313: Rat and quail ontogenesis
N81-32841
Experiment K-314: Fetal and neonatal rat bone and joint development following in Utero spaceflight
N81-32842
Experiment K-315: Studies of the nasal mucosa
N81-32843
Experiment K-316: Effects of weightlessness on body compositics in the rat
N81-32844
Experiment K-317: Bone resorption in rats during spaceflight
N81-32845
Flour beetle reproduction and mutability in weightlessness (experiments aboard Salyut-6 orbital station)
N81-33793
SPACECRAFT CABIN ATMOSPHERES
Closed ecosystems as the means for the outer space exploration by men /Experimental results, perspectives/
[IAF PAPER 81-164] A81-47383
Extravehicular Crewman Work System (ECWS) study program: Prebreathe elimination study
[NASA-CR-167390] N81-32866
SPACECRAFT DESIGN
Life support system development in West Germany
[IAF PAPER 81-167] A81-47386
SPACECRAFT ENVIRONMENTS
Advanced life support - Orbital work base
[IAF PAPER 81-166] A81-47385
Experimental estimation of the functional possibilities of higher plants as medium regenerators in life support systems
[IAF PAPER 81-169] A81-47387
Space Shuttle life support systems - A status report
[IAF PAPER 81-181] A81-47394
SPACECREWS
Italy's contribution, from a medical standpoint, to the space safety of payload scientists, and perspectives for the future
[IAF PAPER 81-250] A81-47424
SPACELAB
Development of an Animal Holding Facility for Space Shuttle studies
[IAF PAPER 81-171] A81-47389
SPINAL CORD
Echoventriculometry used to study spinal fluid circulation during redistribution of fluids in a cranial direction
N81-33777
STATISTICAL ANALYSIS
Efficiency of human visual signal discrimination
A81-48225
STELLAR OCCULTATION
Spacecraft and stellar occulations by turbulent planetary atmospheres. A theoretical investigation of various wave propagation effects and their impact on derived profiles of refractivity, temperature and pressure
[AD-A103069] N81-32846
STRESS (PHYSIOLOGY)
The pharmocological analysis of the stress mechanism and its consequences --- Russian book
A81-49474
Simulated spaceflight effects on mating and pregnancy of rats
[NASA-TM-81326] N81-32852
Field study determination of ventilatory requirements of men rapidly evacuating a space launch complex
[AD-A095532] N81-33820
Biodynamic response to whole-body vibration
N81-34136
STRESS (PSYCHOLOGY)
The pharmocological analysis of the stress mechanism and its consequences --- Russian book
A81-49474
SUBMERGED BODIES
Osmoregulation and interstitial fluid pressure changes in humans during water immersion
A81-48075
SULFURIC ACID
Effects of sulfuric acid mist exposure on pulmonary function
[PB81-208977] N81-33812
SUPERSONIC FLIGHT
Thermal stress in high speed low level flying
A81-49962
SYMPATHETIC NERVOUS SYSTEM
Norepinephrine turnover in lung - Effect of cold pressure and chronic hypoxia
A81-48074
Mechanism of adrenosympathetic system reaction to single exposure to variable magnetic field
N81-33788

SYNAPSES
The neuronal pool as a function unit in the Central Nervous System (CNS)
[TRITA-EA-8009] N81-32859
SYSTEMS ENGINEERING
Systems engineering models of human-machine interaction --- Book
A81-45885
SYSTEMS SIMULATION
Systems engineering models of human-machine interaction --- Book
A81-45885
Man-machine simulations in industrial systems. Volume 1: Narrative
[DE81-027882] N81-32868

T

TARGET RECOGNITION
Development of a search task for the measurement of peripheral visual acuity
A81-48899
TECHNOLOGY ASSESSMENT
Robotic actuators - A technology assessment
A81-47980
TECHNOLOGY TRANSFER
Creation of learning kits
N81-32570
Teaching/learning principles
N81-32572
TECHNOLOGY UTILIZATION
The application of robotic sensors - A survey and assessment
A81-47982
TEETH
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 1: Effects of weightlessness on osteoblast differentiation in rat molar periodontium
N81-32833
Experiment K-310: The effect of spaceflight on osteogenesis and dentinogenesis in the mandibles of rats
N81-32839
TELEVISION RECEIVERS
ECG-converter --- normal television receiver interface
[BMFT-FB-T-80-111] N81-33810
TEMPERATURE CONTROL
Advanced life support - Orbital work base
[IAF PAPER 81-166] A81-47305
TEMPERATURE PROBES
Procedures for evaluating nonperturbing temperature probes in microwave fields
[PB81-205882] N81-33813
TERMINAL CONFIGURED VEHICLE PROGRAM
Development of a multi-media crew-training program for the Terminal Configured Vehicle Mission Simulator
A81-48361
THALLIUM ISOTOPES
Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning
A81-49328
THERMOCOUPLES
Method for attaching cerebral thermocouple wires to the dog's skull
N81-33800
THERMOREGULATION
The evolutionary development of vertebrate thermoregulation
A81-48119
Evaluation of thermal strain index for assessment of tolerance to heat stress
A81-49959
Procedures for evaluating nonperturbing temperature probes in microwave fields
[PB81-205882] N81-33813
THYROID GLAND
Effect of stationary magnetic field on the thyroid
N81-33787
TIBIA
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3A: Trabecular spacing and orientation in the long bones
N81-32835
TISSUES (BIOLOGY)
Theoretical and observational analysis of individual ionizing particle effects in biological tissue
[LBL-11147-REV] N81-32847
Tissue interaction with nonionizing electromagnetic fields
[DE81-027654] N81-32858
TOMOGRAPHY
A new CT collimator for producing two simultaneous overlapping slices from one scan --- for biomedical applications
A81-47675
TOXIC HAZARDS
Evaluation of the CNS and cardiovascular effects of prolonged exposure to bromotrifluoromethane (CBrF3)
[NASA-CR-161078] N81-32853
Chemical characterization and toxicologic evaluation of airborne mixtures
[AD-A102670] N81-32855
TOXICITY
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc and copper
[DE81-029091] N81-32851
TOXICOLOGY
Toxicology and metabolism of nickel compounds
[DE81-028924] N81-32850
Literature sources in toxicology: A survey
[BLL-BLRDB-5542] N81-33814
TRAINING ANALYSIS
Analytic derivation of training transfer effectiveness ratios /TERs/ for new training systems --- for Navy pilots
A81-48360
TRAINING DEVICES
Creation of learning kits
N81-32570
TRAINING SIMULATORS
Computer controlled electronic warfare simulation for tactical operator training
A81-48363
TRANSFER OF TRAINING
Analytic derivation of training transfer effectiveness ratios /TERs/ for new training systems --- for Navy pilots
A81-48360
TRANSMISSION LINES
Assessment of health impacts from electrical-power transmission lines
[UR-3490-2024] N81-32856
TRIBOLIA
Flour beetle reproduction and mutability in weightlessness (experiments aboard Salyut-6 orbital station)
N81-33793

U

UH-1 HELICOPTER
Evaluations of a modified crew seat for the Iroquois
[ARL/APP-REPT-80] N81-32865
ULTRASONIC SPECTROSCOPY
The use of ultrasonic spectroscopy to characterize calcified lesions
A81-47847
ULTRASONIC TESTS
Echoventriculometry used to study spinal fluid circulation during redistribution of fluids in a cranial direction
N81-33777
ULTRAVIOLET RADIATION
Molecular basis of the mutagenic and lethal effects of ultraviolet irradiation
[DE81-028535] N81-32849
Effect of attenuated geomagnetic field on E. coli resistance to ultraviolet rays
N81-33789

V

VARIANCE (STATISTICS)
Variations in response to whole-body vibration - Intensity dependent effects
A81-48500

VEGETATION GROWTH
Experimental estimation of the functional possibilities of higher plants as medium regenerators in life support systems
[IAF PAPER 81-169] A81-47387

VENTILATION
Field study determination of ventilatory requirements of men rapidly evacuating a space launch complex
[AD-A095532] N81-33820

VERTEBRAL COLUMN
Experiment K307: Vertebral body strength of rat spinal columns
N81-32837

VERTEBRATES
The evolutionary development of vertebrate thermoregulation
A81-48119

VERTICAL MOTION
Method of testing white rat elevator response
N81-33798

VESTIBULAR TESTS
Algorithms for the clinical analysis of nystagmus eye movements
A81-47673

VIBRATION EFFECTS
Biodynamic response to whole-body vibration
N81-34136

VIBRATION PERCEPTION
Variations in response to whole-body vibration - Intensity dependent effects
A81-48500

VISUAL ACUITY
Efficiency of human visual signal discrimination
A81-48225
Development of a search task for the measurement of peripheral visual acuity
A81-48499

VISUAL AIDS
Creation of learning kits
N81-32570

VISUAL DISCRIMINATION
Efficiency of human visual signal discrimination
A81-48225

VISUAL FIELDS
Graduated dynamic end point system 'GRADEPS' for assessment of visual field contraction during +Gz acceleration
A81-49952

VISUAL PERCEPTION
Moving and the motion after-effect
A81-47665
Primary events in vision
[AD-A095369] N81-33805
Applications of advanced experimental methods to visual technology reseach simulator studies: Supplemental techniques
[AD-A095633] N81-33815
Effect of different runway size on pilot performance during simulated night landing approaches
[AD-A103190] N81-33816
Advanced computer image generation techniques exploiting perceptual characteristics
[AD-A103365] N81-33818
The development and utilization of integrated multidimensional displays
[AD-A103170] N81-33823

VISUAL SIGNALS
Cues reduce direction uncertainty and enhance motion detection
A81-49673

VISUAL STIMULI
Moving and the motion after-effect
A81-47665

VITAMINS
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc and copper
[DE81-029091] N81-32851

## W

WALSH FUNCTION
A Fast Walsh transform electrocardiogram data compression algorithm suitable for microprocessor implementation
[AD-A104115] N81-33808

WASTES
Effectiveness of decomposition of plant waste by microorganisms under aerobic conditions
N81-33784

WATER PRESSURE
Osmoregulation and interstitial fluid pressure changes in humans during water immersion
A81-48075

WAVE PROPAGATION
Spacecraft and stellar occultations by turbulent planetary atmospheres. A theoretical investigation of various wave propagation effects and their impact on derived profiles of refractivity, temperature and pressure
[AD-A103069] N81-32646

WEAPON SYSTEMS
Computer-based simulations for man-computer system design --- for aircraft weapon systems
A81-48374

WEIGHTLESSNESS
Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies
[IAF PAPER 81-165] A81-47384
Simple technique to evaluate on the ground the energetic expenditure of physical exercise carried out in weightlessness
[IAF PAPER 81-170] A81-47388
Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach
[IAF PAPER 81-175] A81-47390
US rat experiments flown on the Soviet satellite Cosmos 1129
[NASA-TM-81289] N81-32830
Experiment K304: Studies of specific hepatic enzymes and liver constituents involved in the conversion of carbohydrates to lipids in rats exposed to prolonged space flight
N81-32831
Experiment K305: Quantitative analysis of selected bone parameters
N81-32832
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 1: Effects of weightlessness on osteoblast differentiation in rat molar periodontium
N81-32833
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 2: Bone elongation rate and bone mass in metaphysis of long bones
N81-32834
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3A: Trabecular spacing and orientation in the long bones
N81-32835
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3B: Mineralization in the long bones
N81-32836
Experiment K307: Vertebral body strength of rat spinal columns
N81-32837
Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight
N81-32838
Experiment K-310: The effect of spaceflight on osteogenesis and dentinogenesis in the mandibles of rats
N81-32839
Experiment K-310: The effect of space flight on ostenogenesis and dentinogenesis in the mandible of rats. Supplement 1: The effects of space flight on alveolar bone modeling and remodeling in the rat mandible
N81-32840
Experiment K-313: Rat and quail ontogenesis
N81-32841
Experiment K-314: Fetal and neonatal rat bone and joint development following in Utero spaceflight
N81-32842
Experiment K-315: Studies of the nasal mucosa
N81-32843
Experiment K-316: Effects of weightlessness on body composition in the rat
N81-32844

Experiment K-317: Bone resorption in rats during spaceflight
N81-32845

Artificial gravity as a means of preventing atrophic skeletal changes
N81-33791

States of catecholamines and enzymes of synthesis thereof in the adrenal medulla of rats after flight aboard Cosmos-936 biosatellite
N81-33792

Flour beetle reproduction and mutability in weightlessness (experiments aboard Salyut-6 orbital station)
N81-33793

WEIGHTLESSNESS SIMULATION

Antiorthostatic hypokinesia as a means of simulating weightlessness
[IAF PAPER 81-176]
A81-47392

X

X RAY APPARATUS

A new CT collimator for producing two simultaneous overlapping slices from one scan --- for biomedical applications
A81-47675

Routine compliance testing for diagnostic X-ray systems
[PB81-201501]
N81-32862

X RAYS

Criteria for adequate radiation control programs (X Ray): A report of task force 2A
[PB81-197881]
N81-32860

[illegible]

[illegible]
[illegible]

VENTILATION
[illegible]

VERTEBRAL COLUMN
Experiment [illegible]: [illegible] of the spinal column

VERTEBRATES
The evolutionary development of vertebrate thermoregulation

VERTICAL MOTION
[illegible]

VIBRATION EFFECTS
[illegible] response to whole-body vibration

VIBRATION PERCEPTION
[illegible] whole-body vibration [illegible]

VISUAL ACUITY
[illegible]

Development of a search task for the measurement of peripheral visual acuity

VISUAL DISCRIMINATION
[illegible] visual signal discrimination

VISUAL FIELDS
[illegible]

VISUAL PERCEPTION
Motion and the motion after-effect

[illegible]

VITAMINS
Molecular mechanism of the epithelial transport of trace metal ions, [illegible] zinc and copper
[illegible]

W

[illegible]
[illegible] electrocardiogram [illegible]

[illegible]

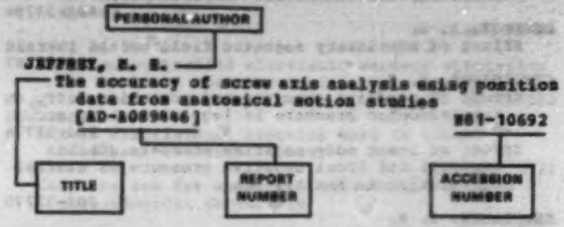
Experiment [illegible]

Experiment K-314: Effects of weightlessness on body composition in the rat
[illegible]

# PERSONAL AUTHOR INDEX

**AEROSPACE MEDICINE AND BIOLOGY** / *A Continuing Bibliography (Suppl. 227)* JANUARY 1982

### Typical Personal Author Index Listing



PERSONAL AUTHOR
JEFFREY, E. E.
The accuracy of screw axis analysis using position data from anatomical motion studies
[AD-A089846]
N81-10692
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

ABRAHAM, S.
Experiment K304: Studies of specific hepatic enzymes and liver constituents involved in the conversion of carbohydrates to lipids in rats exposed to prolonged space flight
N81-32831

ADACHI, R. R.
Experiment K-317: Bone resorption in rats during spaceflight
N81-32845

ADAVAL, S. K.
A histopathological study of coronary arteries in aircrew fatalities during 1962-1978
A81-49951

ADEY, W. R.
Tissue interaction with nonionizing electromagnetic fields
[DE81-027654] N81-32858

AKHUNOV, A. A.
Effect of chronic Gamma irradiation on protein composition and cholesterol content of canine blood
N81-33786

ALEKSEYEV, Y. I.
Age-related changes in body and visceral weight of Wistar rats
N81-33797

ALFEROV, O. A.
Effect of attenuated geomagnetic field on E. coli resistance to ultraviolet rays
N81-33789

ALI, A. K.
Graduated dynamic end point system 'GRADEPS' for assessment of visual field contraction during +Gz acceleration
A81-49952

AMICONI, G.
Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach
[IAF PAPER 81-175] A81-47390

ANDERSON, C. D.
Pilot performance as a function of peripheral cues and color in computer generated images
A81-48362

ANTIPOV, V. V.
A comparative analysis of the biological effects of electromagnetic radiation. I - The nervous system
A81-47194

ANTOS, S.
Comprehension and analysis of information in text. 4: Decision and verification processes
[AD-A102677] N81-32863

ARNAUD, C. D.
Experiment K305: Quantitative analysis of selected bone parameters
N81-32832
Experiment K-314: Fetal and neonatal rat bone and joint development following in Utero spaceflight
N81-32842

ASCENZI, P.
Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach
[IAF PAPER 81-175] A81-47390

ASHWORTH, B. R.
A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task
A81-48006

ATWOOD, G.
The University of Akron urban air pollution and human health study
[PB81-213282] N81-33811

AYZIKOV, G. S.
Method of testing white rat elevator response
N81-33798

## B

BACHERT, R. F.
Computer-based simulations for man-computer system design
A81-48374

BACON, R.
Experiment K-310: The effect of space flight on osteogenesis and dentinogenesis in the mandible of rats. Supplement 1: The effects of space flight on alveolar bone modeling and remodeling in the rat mandible
N81-32840

BALL, K.
Cues reduce direction uncertainty and enhance motion detection
A81-49673

BALLOU, J. E.
Chemical characterization and toxicologic evaluation of airborne mixtures
[AD-A102678] N81-32855

BARANOV, V. S.
Subcutaneousy implanted connector to record arterial pressure and make electrical contact
N81-33799

BARLOW, H. B.
Efficiency of human visual signal discrimination
A81-48225

BARSUKOVA, Z. V.
Linear discriminant function used to assess cosmonaut reaction to LBNP
N81-33772

BAWIN, S. M.
Tissue interaction with nonionizing electromagnetic fields
[DE81-027654] N81-32858

BAYLINK, D. J.
Experiment K305: Quantitative analysis of selected bone parameters
N81-32832

BEDI, J. F.
Effects of sulfuric acid mist exposure on pulmonary function
[PB81-208977] N81-33812

BEECROFT, S.
Real time simulation of QAS Phase I controls and displays
A81-48375
BEIER, J.
Relative efficacy of the proposed Space Shuttle antimotion sickness medications
[IAF PAPER 81-177] A81-47391
BEJCZY, A. K.
Kinesthetic coupling between operator and remote manipulator
A81-47986
BELEW, R. R.
Biocentrifuge system capable of exchanging specimen cages while in operational mode
[NASA-CASE-ARC-23025-1] N81-32829
BELLAMY, L. J.
Development of a search task for the measurement of peripheral visual acuity
A81-48499
BELYAYEV, S. M.
Effect of one day immersion on cardiorespiratory parameters of man during exercise
N81-33770
BERRY, W. E.
Development of an Animal Holding Facility for Space Shuttle studies
[IAF PAPER 81-171] A81-47389
BLACK, F. O.
Algorithms for the clinical analysis of nystagmus eye movements
A81-47673
BLANKENHORN, D. H.
The use of ultrasonic spectroscopy to characterize calcified lesions
A81-47847
BOARER, P.
Variations in response to whole-body vibration - Intensity dependent effects
A81-48500
BOKOVIKOV, A. K.
On increasing reliability of cosmonaut-operator's activity
[IAF PAPER 81-255] A81-47427
BOURNE, L. E., JR.
Comprehension and analysis of information in text. 4: Decision and verification processes
[AD-A102677] N81-32863
BOWMAN, G. H.
Development of an Animal Holding Facility for Space Shuttle studies
[IAF PAPER 81-171] A81-47389
BOYKIN, W. H.
The application of robotic sensors - A survey and assessment
A81-47982
BOYKIN, W. H., JR.
Robotic actuators - A technology assessment
A81-47988
BRADY, J. I.
Human engineering evaluation of the hyperbaric research facility
[AD-A103681] N81-33806
BRAUNSTEIN, M.
Advanced computer image generation techniques exploiting perceptual characteristics
[AD-A103365] N81-33818
BRESCH, C.
Origin of life between Scylla and Charybdis
A81-48725
BUCK, J. R.
Man-machine simulations in industrial systems. Volume 1: Narrative
[DE81-027882] N81-32868
BURGESS, A. E.
Efficiency of human visual signal discrimination
A81-48225
BYCHKOV, V. P.
Use of nutrients to correct the adrenocortical system
N81-33776

C

CANN, C. E.
Experiment K305: Quantitative analysis of selected bone parameters
N81-32832
Experiment K-317: Bone resorption in rats during spaceflight
N81-32845
CASTLEMAN, K. R.
Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight
N81-32838
CHERNIAKOV, I. N.
Oxygen provision to humans under conditions of high-altitude flight
A81-47150
CHERNOVICH, L. L.
Effectiveness of decomposition of plant waste by microorganisms under aerobic conditions
N81-33784
CHRISTOV, A. D.
Effect of stationary magnetic field on the thyroid
N81-33787
CHESTUKHIN, V. V.
Effect of negative pressure and occlusion cuffs on intravascular pressure in legs of healthy man
N81-33774
Effect of lower body negative pressure (Chibis garment) and local negative pressure on central circulation in healthy man
N81-33775
CHETYRKIN, P. V.
Simulated spaceflight effects on mating and pregnancy of rats
[NASA-TM-81326] N81-32852
CHIDSEY, I. L.
Analysis of man-in-the-loop control systems in the presence of nonlinearities
[AD-A102574] N81-32867
CHIN, H. P.
The use of ultrasonic spectroscopy to characterize calcified lesions
A81-47847
CHIZHOV, G. K.
Comparison of direct and indirect methods of measuring cardiac output
N81-33773
CHUBB, G. P.
Real time simulation of QAS Phase I controls and displays
A81-48375
CHUI, L. A.
Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight
N81-32838
CHULMAN, Y.
States of catecholamines and enzymes of synthesis thereof in the adrenal medulla of rats after flight aboard Cosmos-936 biosatellite
N81-33792
CHURCHILL, T.
An anthropometric data base for commercial design applications, phase 1
[PB81-211070] N81-33824
CLARK, W. A. J.
Evaluations of a modified crew seat for the Iroquois
[ARL/APP-REPT-80] N81-32865
CONLON, M.
The University of Akron urban air pollution and human health study
[PB81-213282] N81-33011
CORDAY, E.
Characterization of left ventricular mechanical function during arrhythmias with two dimensional echocardiography. I - Premature ventricular contractions
A81-49327
COURTNEY, A. J.
Development of a search task for the measurement of peripheral visual acuity
A81-48499
CRAWFORD, B. M.
Computer-based simulations for man-computer system design
A81-48374
CRAWSHAW, L. I.
The evolutionary development of vertebrate thermoregulation
A81-48119
CUMMINGS, L. L.
Organizational behavior
[AD-A103625] N81-33819

CURLEY, M. D.
Human engineering evaluation of the hyperbaric research facility
[AD-A103681] N81-33806

D

DAVIS, G. I.
Man-machine simulations in industrial systems. Volume 1: Narrative
[DE81-027882] N81-32868
DAVIDOV, B. I.
A comparative analysis of the biological effects of electromagnetic radiation. I - The nervous system
A81-47194
DEATON, J. V.
Computer controlled electronic warfare simulation for tactical operator training
A81-48363
DEGTYAREV, V. A.
Linear discriminant function used to assess cosmonaut reaction to LBNP
N81-33772
Computer use for automatic measurement of some physiological parameters
N81-33794
DELL, R. B.
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 2: Bone elongation rate and bone mass in metaphysis of long bones
N81-32838
DENISOV, G. V.
Closed ecosystems as the means for the outer space exploration by man /Experimental results, perspectives/
[IAF PAPER 81-164] A81-47383
DEVINCENZI, D. L.
Publications of the Exobiology Program for 1980: A special bibliography
[NASA-TM-83800] N81-32869
DIAZ, R. G.
The application of robotic sensors - A survey and assessment
A81-47982
Robotic actuators - A technology assessment
A81-47988
DINAN, R. N.
A histopathological study of coronary arteries in aircrew fatalities during 1962-1970
A81-49951
DLEYNIKOVA, T. A.
Changes in rabbit immunoreactivity as related to duration of hypokinesia
N81-33803
DOROSHEV, V. G.
Linear discriminant function used to assess cosmonaut reaction to LBNP
N81-33772
Comparison of direct and indirect methods of measuring cardiac output
N81-33773
Computer use for automatic measurement of some physiological parameters
N81-33794
DOWNEY, J. A.
The evolutionary development of vertebrate thermoregulation
A81-48119
DUBOIS, A. B.
Osmoregulation and interstitial fluid pressure changes in humans during water immersion
A81-48075
DUFFY, F. H.
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] N81-32857
DUNHAM, R. B.
Organizational behavior
[AD-A103625] N81-33819
DURAIRAJ, R.
Cardiac arrhythmias in service personnel - An electrophysiologic evaluation
A81-49956
DURNOVA, G. N.
Age-related changes in body and visceral weight of Wistar rats
N81-33797

E

EHRET, C. F.
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] N81-32857
ELWORTH, C. L.
Pilot performance as a function of peripheral cues and color in computer generated images
A81-48362
ELY, D. L.
The University of Akron urban air pollution and human health study
[PB81-213282] N81-33811
EVANS, J. R.
Creation of learning kits
N81-32570

F

FAGET, M. A.
Space Shuttle life support systems - A status report
[IAF PAPER 81-181] A81-47394
FICHTER, E. F.
A novel design for a robot arm
A81-47990
FICKOVA, M.
Metabolic changes in the animals subjected to flight in the biosatellites 'Cosmos'
[IAF PAPER 81-179] A81-47393
FINOGENOVA, N. I.
Comparison of direct and indirect methods of measuring cardiac output
N81-33773
FLEMING, J. E.
Effects of ethidium bromide on development and aging of Drosophila - Implications for the free radical theory of aging
A81-48056
FOLINSBEE, L. J.
Effects of sulfuric acid mist exposure on pulmonary function
[PB81-208977] N81-33812
FOMICHEVA, V. M.
Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies
[IAF PAPER 81-165] A81-47384
FRENKEL, I. D.
Use of nutrients to correct the adrenocortical system
N81-33776
FULLMER, C. S.
Molecular mechanisms of the epithelial transport of toxic metal ions, particularly mercury, cadmium, lead, arsenic, zinc and copper
[DE81-029091] N81-32851

G

GAICH, Y. Y.
Subcutaneous implanted connector to record arterial pressure and make electrical contact
N81-33799
GALICHIY, V. A.
Comparison of direct and indirect methods of measuring cardiac output
N81-33773
GALLE, R. R.
Effect of hypokinesia in head down position on man's equilibrium function
N81-33779
GAMMELL, P. M.
The use of ultrasonic spectroscopy to characterize calcified lesions
A81-47887
GARCIA, C.
Evaluation of the CNS and cardiovascular effects of prolonged exposure to bromotrifluromethane (CBrF3)
[NASA-CR-161078] N81-32853

GAVRILOVA, L. N.
Effect of hypokinesia in head down position on man's equilibrium function
N81-33779

GELLER, I.
Evaluation of the CNS and cardiovascular effects of prolonged exposure to bromotrifluromethane (CBrF3)
[NASA-CR-161078] N81-32853

GENIN, A. M.
States of catecholamines and enzymes of synthesis thereof in the adrenal medulla of rats after flight aboard Cosmos-936 biosatellite
N81-33792

GITELSON, I. I.
Closed ecosystems as the means for the outer space exploration by man /Experimental results, perspectives/
[IAF PAPER 81-164] A81-47383
Experimental estimation of the functional possibilities of higher plants as medium regenerators in life support systems
[IAF PAPER 81-169] A81-47387

GLADILOV, V. V.
Effect of hypoxia on affinity of hemoglobin for oxygen in animals
N81-33802

GLAZKOVA, V. A.
Oxygen provision to humans under conditions of high-altitude flight
A81-47150

GLEISER, C.
Evaluation of the CNS and cardiovascular effects of prolonged exposure to bromotrifluromethane (CBrF3)
[NASA-CR-161078] N81-32853

GLENN, W. V., JR.
A new CT collimator for producing two simultaneous overlapping slices from one scan
A81-47675

GOLDIN, S.
Selected research publications in cognitve science by Rand staff: 1979-1980
[AD-A103311] N81-33817

GOLOVKIN, L. G.
Oxygen provision to humans under conditions of high-altitude flight
A81-47150

GREENAWAY, F.
Evaluation of short-term bioassays to predict functional impairment, development of neurobehavioral bioassays in laboratory animals, directory of institutions/individuals
[AD-A104225] N81-33770

GRIBOVSKAIA, I. V.
Closed ecosystems as the means for the outer space exploration by man /Experimental results, perspectives/
[IAF PAPER 81-164] A81-47383

GRIFFIN, M. J.
Biodynamic response to whole-body vibration
N81-34136

GROH, K. R.
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] N81-32857

GSCHWIND, R. T.
Analysis of man-in-the-loop control systems in the presence of nonlinearities
[AD-A102574] N81-32867

GUERET, P.
Characterization of left ventricular mechanical function during arrhythmias with two dimensional echocardiography. I - Premature ventricular contractions
A81-49327

GUPTA, V. K.
Graduated dynamic end point system 'GRADEPS' for assessment of visual field contraction during +Gz acceleration
A81-49952
Field studies of heat stress in fighter operations in Assam Valley
A81-49961

GUY, W. W.
Space Shuttle life support systems - A status report
[IAF PAPER 81-181] A81-47394

GVOZDEV, S. V.
Effect of negative pressure and occlusion cuffs on intravascular pressure in legs of healthy man
N81-33774
Effect of lower body negative pressure (Chibis garment) and local negative pressure on central circulation in healthy man
N81-33775

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley
**COLORADO**
University of Colorado, Boulder
**DISTRICT OF COLUMBIA**
Library of Congress
**GEORGIA**
Georgia Institute of Technology, Atlanta
**ILLINOIS**
The John Crerar Library, Chicago

**MASSACHUSETTS**
Massachusetts Institute of Technology, Cambridge
**MISSOURI**
Linda Hall Library, Kansas City
**NEW YORK**
Columbia University, New York
**OKLAHOMA**
University of Oklahoma, Bizzell Library
**PENNSYLVANIA**
Carnegie Library of Pittsburgh
**WASHINGTON**
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

**CALIFORNIA**
Los Angeles Public Library
San Diego Public Library
**COLORADO**
Denver Public Library
**CONNECTICUT**
Hartford Public Library
**MARYLAND**
Enoch Pratt Free Library, Baltimore
**MASSACHUSETTS**
Boston Public Library
**MICHIGAN**
Detroit Public Library
**MINNESOTA**
Minneapolis Public Library and Information Center
**NEW JERSEY**
Trenton Public Library

**NEW YORK**
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
**OHIO**
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
**TEXAS**
Dallas Public Library
Fort Worth Public Library
**WASHINGTON**
Seattle Public Library
**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

This bibliography was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Government Information Systems.

## SPECIAL NOTICE

The abstract sections of the supplements of *Aerospace Medicine and Biology* can be bound separately. Individual abstracts can be located readily by means of the page numbers given at each entry, e.g., p0172 N81-27793. To assist the user in binding Supplements SP-7011(216) through SP-7011(227), a title page is included in the back of this Cumulative Index.

# INTRODUCTION

## WHAT THIS CUMULATIVE INDEX IS

This publication is a cumulative index to the abstracts contained in NASA SP-7011(216) through NASA SP-7011(227) of *Aerospace Medicine and Biology: A Continuing Bibliography*. NASA SP-7011, by means of supplements, serves as a current abstracting and announcement journal for references on bioscience and biotechnology. It has been compiled through the cooperative efforts of the American Institute of Aeronautics and Astronautics (AIAA), and the National Aeronautics and Space Administration (NASA). Entries prepared by the two contributing organizations are identified as follows:

1. NASA entries by their *STAR* accession numbers (N81-10000 series)
2. AIAA entries by their *IAA* accession numbers (A81-10000 series)

## HOW THIS CUMULATIVE INDEX IS ORGANIZED

This Cumulative Index includes a subject index, a personal author index, and a corporate source index.

## HOW TO USE THE SUBJECT INDEX

Two types of cross references appear in the subject index:

1. Use (U) references indicate that the subject term is not "postable," i.e., not a valid term, and that the following term or terms are used instead. For example:

   DOSE
   U DOSAGE
   AIRLINERS
   U COMMERCIAL AIRCRAFT
   U PASSENGER AIRCRAFT

2. Narrower Term (NT) references refer the user to more specific headings in the same subject area, under which additional material on the subject may be found. For example:

   FATIGUE (BIOLOGY)
   NT AUDITORY FATIGUE
   NT FLIGHT FATIGUE
   NT MUSCULAR FATIGUE

In addition, a searcher may use the title or title and title extension in the index to narrow further his quest for particular items, this is because subject terms can readily include more than one class of document. For example:

BIOLOGICAL EFFECT
Vibratory force effect upon
biological systems, particularly
human organism.
Biological effect of cosmic and
solar radiations on human
body at high altitudes.

illustrates a case where two references on different topics are listed under the same subject term.

## HOW TO USE THE PERSONAL AUTHOR INDEX

All personal authors used in the abstract-section citations in the individual Supplements appear in the index. Differences in translation schemes may require multiple searching of the index for variants of an author's name. For example:

EMELIANOV, M. D.
and
YEMELYANOV, M. D.

## HOW TO USE THE CORPORATE SOURCE INDEX

The corporate source index entries are abridged versions of the corporate sources used in the abstract-section citations in the individual Supplements. The corporate source supplementary (organizational component) does not appear in the index. For example:

NEW MEXICO STATE UNIV., LAS CRUCES. DEPT. OF BIOLOGY. (Source citation entry)
NEW MEXICO STATE UNIV., LAS CRUCES. (Source index entry)

## IDENTIFICATION OF DESIRED SUPPLEMENT

The abstract and descriptive cataloging for any accession number selected from the indexes may be found in the appropriate Supplement. The page-number range of each Supplement appears on the inside front cover of this index. Once the range of page numbers containing the selected accession number is located in the second column, the desired Supplement number will be found in the first column. For example:

Page 179 will be found in Supplement 226.

## AVAILABILITY OF DOCUMENTS

Information concerning the availability of documents announced in *Aerospace Medicine and Biology* supplements is found in the Introduction to the most currently issued supplement.

# TABLE OF CONTENTS

Page

**Subject Index** .................................................. A-1

**Corporate Source Index** .................................................. B-1

**Personal Author Index** .................................................. C-1

## HOW TO USE THE PERSONAL AUTHOR INDEX

All personal authors used in the [illegible] in the [illegible] in the index. Differences in [illegible] variants of an author's name. [illegible]

EMELIANOV, M. [illegible]
and
YEMELYANOV, M. [illegible]

## HOW TO USE THE CORPORATE SOURCE INDEX

The corporate source [illegible] [illegible] [illegible] international [illegible] [illegible]

NEW MEXICO STATE UNIV., LAS CRUCES
NEW MEXICO STATE UNIV., LAS CRUCES

## IDENTIFICATION OF CARDED SUPPLEMENT

The abstract and descriptive cataloging for any accession [illegible] be found in the appropriate Supplement. The page-number [illegible] on the inside back cover of this index. Once the [illegible] selected accession number is located in the second column, the [illegible] be found in the first column. For example:

Page 179 will be found in Supplement [illegible]

## AVAILABILITY OF DOCUMENTS

Information concerning the availability of documents [illegible] *Biology* supplements is found in the Introduction [illegible] ment.

ACCESSION NUMBER

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

A-10 AIRCRAFT
  Heat stress in the A-10 cockpit - Flights over desert
  p0205 A81-47101
ABILITIES
  Kinesimetric method and apparatus
  [NASA-CASE-MSC-18929-1] p0062 N81-15699
ABIOGENESIS
  A theory for the origin of a self-replicating chemical system. I - Natural selection of the autogen from short, random oligomers
  p0043 A81-16707
  Are sulfur isotope ratios sufficient to determine the antiquity of sulfate reduction --- implications for chemical evolution
  p0047 A81-17983
  Compartmentalization of self-reproducing machineries - Multiplication of microsystems with self-instructing polymerization of amino acids
  p0048 A81-17988
  Chemical evolution and the origin of life - Bibliography supplement 1978
  p0048 A81-17990
  Experiments on the abiotic amplification of optical activity
  p0128 A81-32062
  Enhancement of peptide bond formation by polyribonucleotides on clay surfaces in fluctuating environments
  p0131 A81-33797
  Carbon dioxide, ammonia and the origin of life
  p0143 A81-36590
  How many theories for the origin of /proto/life
  p0180 A81-42230
ABNORMALITIES
  Disposition of electrocardiographic abnormalities in aviation
  p0212 N81-31838
ABSORBENTS
  Residence time and carbon dioxide scrubbing efficiency in life support systems
  p0081 A81-23398
ABSORPTION BANDS
  U ABSORPTION SPECTRA
ABSORPTION SPECTRA
  Toxicology and metabolism of nickel compounds
  [DOE/EV-03140/5] p0036 N81-13629
ABUNDANCE
  Amino acids and hydrocarbons approximately 3,800-Myr old in the Isua rocks, southwestern Greenland
  p0048 A81-18050
ACCELERATION (PHYSICS)
  NT ANGULAR ACCELERATION
  NT HIGH GRAVITY ENVIRONMENTS
  NT IMPACT ACCELERATION
  Helmet weight simulator
  [NASA-CASE-LAR-12320-1] p0176 N81-27006
ACCELERATION PROTECTION
  The development and airborne testing of the FALE seat
  [AD-A103663] p0240 N81-33821
ACCELERATION STRESSES (PHYSIOLOGY)
  NT CENTRIFUGING STRESS
  Coronary blood flow during +Gz stress in +Gz conditioned adult miniature swine
  p0005 A81-12233
  Alterations in cardiac rate and rhythm in miniature swine during simulated aerial combat maneuver +Gz stress
  p0005 A81-12235
  Body acceleration distribution and O2 uptake in humans during running and jumping
  p0024 A81-13923
  Frequency domain measures of human performance under G-stress
  p0066 A81-20500
  The response of a realistic computer model for sitting humans to different types of shocks
  p0072 A81-22550
  The influence of +Gz on semicircular canal function
  p0107 A81-30277
  Experimental motion sickness - Efficacy of transdermal scopolamine plus ephedrine
  p0145 A81-37286
  Cardiovascular aspects of sustained intense acceleration
  p0160 A81-39682
  Functional characteristics of cardiovascular system response to head-pelvis overloads
  p0201 A81-44892
  Graduated dynamic end point system 'GRADEPS' for assessment of visual field contraction during +Gz acceleration
  p0224 A81-49952
  Relationship between stress due to physical environmental factors and human reliability
  [RAE-LIB-TRANS-2049] p0090 N81-19756
  Accelerations affecting man in stormy weather
  p0118 N81-21750
  Preliminary analysis of motion sickness incidence data
  [AD-A096750] p0138 N81-22691
  Radioactive microsphere study of cerebral blood flow under acceleration
  [AD-A094623] p0154 N81-25677
  Measurement of head accelerations of horses, feasibility study
  [PB81-152191] p0156 N81-25685
  Physiological criteria related to G tolerance in combat aircrew
  p0160 N81-26702
  The effects of acceleration on combat pilot performance
  p0160 N81-26703
  Experience with highly selective screening techniques for acceleration stress duty
  p0160 N81-26704
  Modeling the effects of sustained accelerations on pilot tracking performance
  p0212 N81-31839
  Use of nutrients to correct the adrenocortical system --- acceleration stresses (physiology)
  p0234 N81-33776

ACCELERATION TOLERANCE
Coronary blood flow during +Gz stress in +Gz conditioned adult miniature swine
p0005 A81-12233
Comparative analysis of human tolerance to prolonged loading at various gravitational gradients
p0106 A81-29319
Radiation and G tolerance in rats
p0150 A81-38088
Cardiovascular aspects of sustained intense acceleration
p0160 A81-39682
Human adaptation to simulated gravitational fields
p0163 A81-40372
Effects of centrifugation on gonadal and adrenocortical steroids in rats
[NASA-CR-163858] p0057 N81-15663
Tolerance of the head and neck to -G sub z inertial loading of the head
[AD-A097632] p0137 N81-23789
Quantitative evaluation of clinical manifestations of motion sickness
p0193 N81-29757
Use of nospanum in combination with certain vitamins against seasickness
p0194 N81-29760
In support of the Joint Army/Navy Aircrew Impact Injury Prevention Program
[AD-A102505] p0210 N81-31819
ACCELEROMETERS
Errors in derived kinematic variables determined from a fixed accelerometer configuration --- in human dynamic and physiological response measurements
p0130 A81-32005
ACCIDENT INVESTIGATION
NT AIRCRAFT ACCIDENT INVESTIGATION
Psychophysiological and other factors affecting human performance in accident prevention and investigation
p0203 A81-46324
Spatial disorientation in flight: Current problems
[AGARD-CP-287] p0070 N81-17690
Visual illusions as a probable cause of aircraft accidents
p0070 N81-17703
Disorientation in Army helicopter operations: A general review --- accident investigation
p0079 N81-17704
ACCIDENT PREVENTION
Psychophysiological and other factors affecting human performance in accident prevention and investigation
p0203 A81-46324
Psychophysiological and other factors affecting human performance in accident prevention and investigation
[CONF-801096-1] p0061 N81-15694
Routine compliance testing for diagnostic X-ray systems
[PB81-201501] p0232 N81-32862
ACCIDENTS
NT BIRD-AIRCRAFT COLLISIONS
ACCLIMATIZATION
NT ALTITUDE ACCLIMATIZATION
NT COLD ACCLIMATIZATION
NT HEAT ACCLIMATIZATION
Elevation of the tolerance of the organism to high environmental temperatures /Review of the literature/
p0124 A81-30788
Human ecological physiology. Part 2 - Human adaptation to various climato-geographical conditions --- Russian book
p0204 A81-46796
ACCOMMODATION
Magnitude of visual accommodation to a head-up display
[NASA-TP-1796] p0080 N81-17711
ACCUMULATORS
Urine collection device
[NASA-CASE-MSC-16433-1] p0147 N81-24711
Urine collection apparatus --- feminine hygiene
[NASA-CASE-MSC-18381-1] p0188 N81-28740
Sweat collection capsule
[NASA-CASE-ARC-11031-1] p0194 N81-29763
ACETATES
Effects of light on respiration and development of photosynthetic cells --- scenedesmus obliquus
[DOE/ER-03231/5] p0098 N81-19755
ACETIC ACID
Polarity and the movement of /C-14/indol-3-ylacetic acid in the Coenocyte, Caulerpa prolifera
p0086 A81-24966
ACETYL COMPOUNDS
Subunit specificity of the two acetyl-CoA synthetases of yeast as revealed by an immunological approach
p0027 A81-15403
ACETYLENE
A comparison between freon and acetylene rebreathing for measuring cardiac output --- in exercise test
p0022 A81-13505
ACID BASE EQUILIBRIUM
Effect of CO2 set point on ventilatory response to exercise
p0178 A81-41791
Hemorheological changes, the state of microcirculation, and blood acid-base balance in rats under conditions of a 30-day limiting of the motor activity
[NASA-TM-76464] p0073 N81-16719
External respiration in the presence of hyperbaric oxygenation
p0188 N81-28713
ACID RAIN
A continuation of base-line studies for environmentally monitoring Space Transportation Systems at John F. Kennedy Space Center. Volume 2: Chemical studies of rainfall and soil analysis
[NASA-CR-163122] p0016 N81-11627
ACIDOSIS
The effect of short-term antiorthostatic hypokinesia on central and intracardiac hemodynamics and metabolism of a healthy person
[NASA-TM-76525] p0136 N81-22689
ACIDS
NT ACETIC ACID
NT ALANINE
NT AMINO ACIDS
NT CARBOXYLIC ACIDS
NT DEOXYRIBONUCLEIC ACID
NT FATTY ACIDS
NT HISTIDINE
NT LACTIC ACID
NT NUCLEIC ACIDS
NT PEPTIDES
NT RIBONUCLEIC ACIDS
NT SULFURIC ACID
Comparative study of choleretic agents in anesthetized rats as well as in restrained and and unrestrained rats, with or without compensation for biliary loss
[NASA-TM-76178] p0034 N81-13617
ACOUSTIC ATTENUATION
Construction of pulse echo ultrasonic test equipment and acquisition of tissue signature data
[PB80-221880] p0061 N81-15692
ACOUSTIC IMPEDANCE
Comparison of Eustachian tube function measured by the microflow method and a new quantitative impedance method
p0205 A81-47106
ACOUSTIC MEASUREMENTS
NT NOISE MEASUREMENT
ACOUSTIC PROPERTIES
NT ACOUSTIC IMPEDANCE
NT ACOUSTIC SCATTERING
NT SOUND INTENSITY
ACOUSTIC SCATTERING
Construction of pulse echo ultrasonic test equipment and acquisition of tissue signature data
[PB80-221880] p0061 N81-15692
ACOUSTICS
NT PSYCHOACOUSTICS
Genesis of breath sounds-Preliminary verification of theory
[NASA-TM-81897] p0031 N81-12719
ACQUISITION
NT DATA ACQUISITION
NT TARGET ACQUISITION
ACROBATICS
Functional asymmetry of posture and body system regulation
[NASA-TM-76401] p0060 N81-15687

ACTH
 U ADRENOCORTICOTROPIN (ACTH)
ACTINOMETERS
 NT MICROWAVE RADIOMETERS
ACTIVATION (BIOLOGY)
Psychophysiological aspects of the superslow rhythmic activity of the brain --- Russian book
p0039 A81-16594
ACTIVATION ANALYSIS
 NT NEUTRON ACTIVATION ANALYSIS
ACTIVITY (BIOLOGY)
Effect of weightlessness on sympathetic-adrenomedullary activity of rats during space flight on the biosatellites 'COSMOS'
[IAF PAPER 80-C-120] p0049 A81-18290
Phytoplankton studies and nutrient concentrations in the vicinity of the C. P. Crane Generating Station
[PB81-114746] p0077 N81-17693
Comparative efficacy of various biologically active compounds during exercise
p0108 N81-28709
ACTIVITY CYCLES (BIOLOGY)
NASA to study effects of jet lag on pilot performance
[NASA-NEWS-RELEASE-80-197] p0035 N81-13622
Significance of circadian rhythms in aerospace operations
[AGARD-AG-287] p0148 N81-28715
Circadian biorhythms and flight planning
p0187 N81-28735
ACTUATORS
Robotic actuators - A technology assessment
p0221 A81-47988
ACUITY
 NT VISUAL ACUITY
A literature study on visual motion acuity (minimum perceptible movement)
[DFVLR-MITT-80-06] p0055 N81-14618
ADAPTATION
 NT ACCLIMATIZATION
 NT ALTITUDE ACCLIMATIZATION
 NT COLD ACCLIMATIZATION
 NT DARK ADAPTATION
 NT DESERT ADAPTATION
 NT HEAT ACCLIMATIZATION
 NT LIGHT ADAPTATION
 NT RETINAL ADAPTATION
Velocity after-effects - The effects of adaptation to moving stimuli on the perception of subsequently seen moving stimuli
p0088 A81-25891
Human memorizing of emotionally significant and neutral information during adaptation to different climato-geographic conditions
p0107 A81-29322
Human adaptation to simulated gravitational fields
p0163 A81-40372
Vestibular selection criteria development --- assessing susceptibility to motion sickness during orbital space flight
[NASA-CR-161044] p0189 N81-28740
ADAPTIVE CONTROL
 NT LEARNING MACHINES
Augmented feedback in adaptive motor skill training
p0203 A81-46451
ADAPTIVE CONTROL SYSTEMS
 U ADAPTIVE CONTROL
ADENINES
 NT RIBONUCLEIC ACIDS
ADENOSINES
Myocardial adenosine and coronary resistance during increased cardiac performance
p0003 A81-10773
Oligoadenylates formation on an oligouridylate template in the presence of a lead catalyst
p0132 A81-33799
Cyclic AMP system in muscle tissue during prolonged hypokinesia
[NASA-TM-76186] p0035 N81-13627
ADMITTANCE
 U ELECTRICAL IMPEDANCE
ADRENAL GLAND
The influence of hyperbaric oxygenation on catecholamine concentration in the rat brain and adrenal glands
p0086 A81-24930
Renal function and glucocorticoid activity of the adrenal cortex during immersion
p0012 A81-10673
Naloxone inhibits and morphine potentiates. The adrenal steroidogenic response to ACTH
[NASA-TM-81253] p0053 N81-14606
Functional-morphological parallels of the hypothalamo-pituitary-adrenal system response reaction to long-term hypokinesia
[NASA-TM-76001] p0112 N81-20716
State of cosmonauts' adrenohypophyseal system following orbital flights of different duration
p0117 N81-21740
Use of nutrients to correct the adrenocortical system --- acceleration stresses (physiology)
p0234 N81-33776
Mechanism of adrenosympathetic system reaction to single exposure to variable magnetic field
p0235 N81-33780
States of catecholamines and enzymes of synthesis thereof in the adrenal medulla of rats after flight aboard Cosmos-936 biosatellite
p0236 N81-33792
ADRENAL METABOLISM
Activity of the sympathetic-adrenomedullary system in rats after space flight on the Cosmos biosatellites
p0154 A81-40379
The functional condition of the adrenal cortex and kidneys of a healthy man during prolonged antiorthostatic hypokinesia
p0201 A81-44896
Effect of ionized air environment on human hormonal systems
p0185 N81-28744
ADRENALINE
 U EPINEPHRINE
ADRENERGICS
Changes in Beta-adrenergic responsiveness of rats during chronic cold exposure
p0042 A81-16676
Effect of weightlessness on sympathetic-adrenomedullary activity of rats during space flight on the biosatellites 'COSMOS'
[IAF PAPER 80-C-120] p0049 A81-18290
Avoidance learning and mechanism of the protective effect of apomorphine against hypoxia
p0182 A81-34305
ADRENOCORTICOTROPIN (ACTH)
Naloxone inhibits and morphine potentiates. The adrenal steroidogenic response to ACTH
[NASA-TM-81253] p0053 N81-14606
The role of ACTH and glucocorticoids in nonenzymatic fibrinolysis during immobilization stress in animals
[NASA-TM-76175] p0109 N81-20693
ACTH-like peptides increase pain sensitivity and antagonize opiate analgesia
[NASA-TM-81254] p0116 N81-21731
Stress antagonizes morphine-induced analgesia in rats
[NASA-TM-81282] p0116 N81-21732
ADSORPTION
Adsorption of amino acid enantiomers by Na-montmorillonite
p0129 A81-32066
Concentration of selected trace metals by marine phytoplankton
p0170 N81-27775
AERIAL RECONNAISSANCE
Optical and electro-optical devices in tactical reconnaissance - Some human factors issues
p0159 A81-39429
AEROBES
Subunit specificity of the two acetyl-CoA synthetases of yeast as revealed by an immunological approach
p0027 A81-15483
Effectiveness of decomposition of plant waste by microorganisms under aerobic conditions
p0235 N81-33784
AEROBIOLOGY
Soviet literature in aviation, space and high-altitude biology and medicine. /Bibliography. Number 3/ --- Russian book
p0131 A81-33772
AERODYNAMIC BUZZ
 U FLUTTER
AERODYNAMIC FORCES
Wind tunnel measurements of total force and extremity flail potential forces on a crew

member in close proximity to a cockpit
[AD-A100917] p0196 N81-29775
AEROEMBOLISM
Flight after diving --- flight safety considerations
p0008 A81-12757
Chokes - Favorable response to delayed recompression therapy: A case report
p0206 A81-47110
AEROMAGNETISM
U GEOMAGNETISM
AEROMAGNETO FLUTTER
U FLUTTER
AERONAUTICAL ENGINEERING
Acquisition strategy implications of a Long Range Combat Aircraft (LRCA)
[AD-A091109] p0034 N81-13618
AERONAUTICS
Sixth advanced operational aviation medicine course
[AGARD-R-681] p0211 N81-31827
AEROSOLS
Deposition and clearance of inhaled aerosols
[UCD-472-503] p0036 N81-13630
Low-Btu-gasifier emissions toxicology
[LMF-77] p0149 N81-24723
Chemical characterization and toxicologic evaluation of airborne mixtures
[AD-A102670] p0231 N81-32055
Aerosol factors affecting respiratory deposition
[DE81-024425] p0238 N81-33809
AEROSPACE ENGINEERING
NT AERONAUTICAL ENGINEERING
AEROSPACE ENVIRONMENTS
Effect of space flight factors on the prophase in microspores of Tradescantia paludosa
p0046 A81-17117
Bioelectrical opposing phenomena and space brain research
p0083 A81-23841
Optical and electron-microscopic studies of the Funaria hygrometrica protonema after cultivation for 96 days in space
p0164 A81-40375
Space life sciences
p0202 A81-45671
Further study for fabrication, evaluation, and testing of monolayer woven materials for space suit insulation
[NASA-CR-166140] p0076 N81-16740
Rheography in weightlessness
[NASA-TM-76439] p0092 N81-18638
Ionizing radiation risks to Satellite Power Systems (SPS) workers in space
[DOE/ER-0094] p0135 N81-22694
Respiratory reactions to changes in gas environment density at different rates of inspiratory flow
p0185 N81-28714
AEROSPACE MEDICINE
The dependence of nystagmus direction on cupula position and the direction of endolymph flow during sinusoidal rotation
p0001 A81-10124
For the furthest improvement of the medical security of air force personnel
p0001 A81-10374
Characteristics of the clinical picture and diagnosis of uncomplicated peptic ulcers in flight personnel
p0001 A81-10375
The vestibular apparatus
p0003 A81-10823
Altered hormonal response to short-term bicycle exercise in young men after prolonged physical strain, caloric deficit, and sleep deprivation
p0003 A81-11196
A contribution to the topography of temperature regulation in man
p0003 A81-11197
Effect of weightlessness and centrifugation on red cell survival in rats subjected to space flight
p0005 A81-12232
Alterations in cardiac rate and rhythm in miniature swine during simulated aerial combat maneuver +Gz stress
p0005 A81-12235
Fasting or feeding - A survey of fast-jet aircrew nutrition in the Royal Air Force Strike Command, 1979
p0006 A81-12236
Influence of air flow and skin temperature on sweating at the onset, during and following exercise
p0007 A81-12255
Resuscitation on board long distance flights
p0007 A81-12752
Flight after diving --- flight safety considerations
p0008 A81-12757
Aeronautical medical education in France
p0008 A81-12758
Experimental study of the functional, aminergic and cerebrovascular effects of hypobaric hypoxia
p0008 A81-12760
Comparison of the secondary effects on visual function of two hypotonizing eye washes - An incidence in aeronautics at the time of ophthamological examination of flight personnel
p0008 A81-12761
Tropical diseases and air transport
p0009 A81-12762
The importance of certain parasitoses in air transport /amebiasis, schistosomiasis, trypanosomiasis, ascariasis/
p0009 A81-12763
Aerospace Medical Association, Annual Scientific Meeting, Anaheim, Calif., May 12-15, 1980, Preprints
p0019 A81-13116
Thirst following water deprivation in humans
p0019 A81-13199
Vectorcardiographic changes in hypoxic environment
p0020 A81-13226
Pulmonary fat embolism in aircrew fatalities
p0020 A81-13227
Ambulatory monitoring in evaluation of aircrew with cardiovascular problems
p0020 A81-13228
Aeromedical assessment of cockpit control - 'Canopy jettisoning handle'
p0020 A81-13229
Physiological aspects of high speed low level flying
p0020 A81-13232
Visual problems in high speed low level flying
p0021 A81-13235
Mechanism of stress on human body - Psychophysiological aspects
p0021 A81-13236
The importance of myocardial perfusion in the pathogenesis of the cardiac pathology associated with +Gz exposure in miniature swine
p0022 A81-13502
Orthostatic responses in heat tolerant and intolerant subjects compared by three different methods
p0022 A81-13503
Autonomic mechanisms in the initial heart rate response to standing
p0024 A81-13920
Body acceleration distribution and O2 uptake in humans during running and jumping
p0024 A81-13923
A 175-day space flight - Some results of medical studies
p0025 A81-14124
Dynamic head displacement measuring system
p0025 A81-14800
Value and limitations of two dimensional echocardiography in assessment of cardiomyopathy
p0041 A81-16661
The continuous recording of ECGs by the Holter method /Technical details/
p0043 A81-16686
Morphological and cardiovascular data concerning student pilots of the French air force
p0043 A81-16690
The sickle cell trait and aviation with regard to six carriers of the sickle cell trait among the technical flight personnel of the Air Mali Company
p0043 A81-16691
Hypertension and orthostatic hypotension in applicants for spaceflight training and spacecrew - Medical investigation, clinical assessment, and evaluation for spaceflight duties
[IAF PAPER 80-C-124] p0049 A81-18291
The Shuttle and its importance to space medicine
[IAF PAPER 80-C-126] p0049 A81-18292
Long-term follow-up of lung volume measurements in initially healthy young aviators
p0070 A81-22105

Postmortem coronary atherosclerosis findings in general aviation accident pilot fatalities - 1975-77
p0071 A81-22109

Effect of body supination angle on subjective response to whole-body vibration
p0071 A81-22110

Pilot's aeromedical guide --- Book
p0081 A81-23370

Neck muscle resistance to head impact
p0081 A81-23390

In vivo bone strain measurements - Clinical results, animal experiments, and a proposal for a study of bone demineralization in weightlessness
p0081 A81-23393

Biofeedback rehabilitation of airsick aircrew
p0082 A81-23397

Evaluation of the Cavitron Spirometric Computer for accuracy in clinical screening spirometry
p0082 A81-23398

The physiological behavior of man in space
p0082 A81-23502

Commensal feeding
p0082 A81-23503

Vision in space
p0083 A81-23504

Tolerance to aviation stresses after yogic exercise - A psychophysiological evaluation
p0084 A81-23925

Intestinal microecology under extreme conditions
p0085 A81-24548

Biomedical problems involved in assuring the safety and performance of manned space flights
p0088 A81-26413

Development of occupational and environmental health criteria for the F-15
p0089 A81-26760

Variations in gravitoinertial force level affect the gain of the vestibulo-ocular reflex - Implications of the etiology of space motion sickness
p0089 A81-26771

Functional steadiness of the cerebral circulatory system under altered gravitational conditions
p0090 A81-26772

Change in the biomechanical properties in the bone of rats as a result of a 19-day space flight in the Kosmos-936 satellite
p0108 A81-28116

Effects of antiorthostatic bedrest on the cardiorespiratory responses to exercise
p0126 A81-31544

Eight-year follow-up of exercise electrocardiograms in healthy, middle-aged aviators
p0126 A81-31545

Aviation medicine --- Russian book
p0127 A81-32000

Soviet literature in aviation, space and high-altitude biology and medicine. /Bibliography. Number 3/ --- Russian book
p0131 A81-33772

Medical studies aboard Soviet manned spacecraft
p0141 A81-34072

The physical and clinical bases of the determination of tympanic impedance, and its usefulness in the accurate evaluation of the tympano-tubaric system efficiency of flight personnel /Jet pilots/
p0143 A81-34871

Hemodilution, vasopressin suppression, and diuresis during water immersion in man
p0144 A81-37285

Periodontal disease in military aircrew members - A clinical and radiographical study
p0145 A81-37290

Individual psychological characteristics of pilots which permit erroneous actions
p0145 A81-37349

The military aviator with renal stone disease
p0159 A81-38850

Motion sickness and sensory illusions - Effects of rotations around horizontal axis
p0159 A81-39676

Observations on inner ear and pressure variations
p0160 A81-39678

A contribution to the causal study of air accidents - A method for testing for medicinal substances in biologic samples
p0160 A81-39681

Cardiovascular aspects of sustained intense acceleration
p0160 A81-39682

Betablocking collyrium and glaucoma in relation to aviators
p0160 A81-39683

Diagnosis of microscopic hematuria in air crews
p0160 A81-39685

The action of simulated and true weightlessness on the digestive tract of rats
p0164 A81-40378

[IAF PAPER 81-170] p0218 A81-47388
Italy's contribution, from a medical standpoint, to the space safety of payload scientists, and perspectives for the future
[IAF PAPER 81-250] p0219 A81-47424
On increasing reliability of cosmonaut-operator's activity
[IAF PAPER 81-255] p0219 A81-47427
Biorhythmological status as one of the criteria for cosmonaut screening
p0011 N81-10666
Performance considerations in long-term spaceflight
[NASA-CR-152384] p0095 N81-18651
Effect of remaining briefly in orthostatic and antiorthostatic positions on man's tracking performance
p0110 N81-21745
Fitness of human vision with exposure to very bright light
p0186 N81-28729

ASTRONAUT TRAINING
Hypertension and orthostatic hypotension in applicants for spaceflight training and spacecrew - Medical investigation, clinical assessment, and evaluation for spaceflight duties
[IAF PAPER 80-C-124] p0049 A81-10291
Payload Crew Training Complex (PCTC) utilization and training plan
p0018 N81-11990
Preliminary Report: Issues in selection and training for long duration space flight
[NASA-CR-152386] p0095 N81-18652
Work of the cosmonaut
[NASA-TM-76437] p0095 N81-18658
Ground experiments for finding principles and working out methods for preventing adverse effects of weightlessness on the human organism
[NASA-TM-76465] p0120 N81-21760
Biomedical training of cosmonauts (history, content, stages, evolution and trends of development)
p0186 N81-28724
Psychophysiological screening: Status and prospects
p0186 N81-28725

ASTRONAUTS
NT ORBITAL WORKERS
Inflight diagnosis of the space crew cardiovascular system through echocardiography
[IAF PAPER 80-C-127] p0049 A81-10293
Measurement of mass under weightless conditions --- astronaut body weight determination
p0088 A81-26032
Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach
[IAF PAPER 81-175] p0218 A81-47390

ASTRONOMICAL SPECTROSCOPY
The search for early forms of life in other planetary systems - Future possibilities afforded by spectroscopic techniques
p0087 A81-25638

ASYMMETRY
Functional asymmetry of operator performance
p0012 N81-10671
Functional asymmetry of posture and body system regulation
[NASA-TM-76401] p0060 N81-15687

ATHEROSCLEROSIS
U ARTERIOSCLEROSIS

ATHLETES
On the modification of orthostatic tolerance by athletic training and its relation with the physical fitness
[IAF PAPER 80-C-117] p0048 A81-10288

Functional asymmetry of posture and body system regulation
[NASA-TM-76401] p0060 N81-15687
The physiological effects of dehydration caused by sweat loss --- athletes
[NASA-TM-75893] p0120 N81-21761
ATMOSPHERIC COMPOSITION
Production of NO2/-/ and N2O by nitrifying bacteria at reduced concentrations of oxygen
p0179 A81-42050
ATMOSPHERIC ENTRY SIMULATION
Cardiovascular and biochemical response to simulated space flight entry
p0070 A81-22107
ATMOSPHERIC IMPURITIES
U AIR POLLUTION
ATMOSPHERIC IONIZATION
The hygienic significance of the ionization of the cabin atmosphere of a manned spacecraft
p0085 A81-24586
Some biochemical parameters of healthy man in a sealed chamber with periodic ionization of air
p0192 N81-29750
ATMOSPHERIC MODELS
NT BREADBOARD MODELS
NT DYNAMIC MODELS
ATMOSPHERIC PRESSURE
Permissible rates of barometric pressure changes --- human tolerance in flight environment
p0103 A81-27396
Effect of hyperbaric nitrogen and oxygen atmosphere on activity of respiratory center
p0119 N81-21758
ATMOSPHERIC TURBULENCE
NT LOW LEVEL TURBULENCE
Spacecraft and stellar occulations by turbulent planetary atmospheres. A theoretical investigation of various wave propagation effects and their impact on derived profiles of refractivity, temperature and pressure
[AD-A103069] p0229 N81-32846
ATOMIC EXPLOSIONS
U NUCLEAR EXPLOSIONS
ATROPHY
Protein synthesis rates in atrophied gastrocnemius muscles after limb immobilization
p0178 A81-41788
Artificial gravity as a means of preventing atrophic skeletal changes
p0236 N81-33791
ATTACK AIRCRAFT
NT A-10 AIRCRAFT
NT B-52 AIRCRAFT
NT BOMBER AIRCRAFT
NT F-4 AIRCRAFT
NT F-16 AIRCRAFT
NT FIGHTER AIRCRAFT
NT MIRAGE AIRCRAFT
ATTENTION
The nonspecific motor activation reflex in man /the startle reflex/ and its dependence on the state of attention
p0026 A81-15429
Cockpit workload, residual attention, and pilot error
p0029 A81-15690
Applications of event-related brain potentials in human engineering
[AD-A097542] p0138 N81-23795
The processing demands of higher order manual control: Application of additive factors methodology
[AD-A098077] p0150 N81-24728
ATTENUATION
NT ACOUSTIC ATTENUATION
ATTENUATION COEFFICIENTS
Construction of pulse echo ultrasonic test equipment and acquisition of tissue signature data
[PB80-221880] p0061 N81-15692
ATTITUDE (INCLINATION)
NT PITCH (INCLINATION)
NT ROLL
The perception of verticality and the frame of reference of the visual tilt aftereffect
p0105 A81-28899
Study of the combined effect of antiorthostatic position and LBNP on man's tracking accuracy and spatial orientation
p0011 N81-10667
Spatial disorientation in flight: Current problems
[AGARD-CP-287] p0078 N81-17698
Physiological mechanisms of spatial disorientation not of visual origin
p0078 N81-17699
An update of findings regarding spatial disorientation in flight: A reconsideration of underlying mechanisms
p0078 N81-17700
The ambient visual system and spatial orientation --- flight stress (biology)
p0078 N81-17702
Disorientation in Army helicopter operations: A general review --- accident investigation
p0079 N81-17704
Illusions of attitude and movement during Earth-horizontal rotation --- oculogravic illusions
p0079 N81-17705
A multistation spatial disorientation demonstrator
p0079 N81-17708
The Royal Air Force Spatial Disorientation Familiarisation Devices (SDFD)
p0079 N81-17709
Effect of remaining briefly in orthostatic and antiorthostatic positions on man's tracking performance
p0118 N81-21745
ATTITUDE CONTROL
NT DIRECTIONAL CONTROL
ATTITUDE GYROS
Pilot reaction to attitude gyro failure - A flight experiment
p0105 A81-29143
AUDIO FREQUENCIES
The recording and preliminary analysis of a data base for the assessment of strain in air traffic controllers, using speech
[RAE-TM-FS-334] p0033 N81-12737
AUDIO VISUAL EQUIPMENT
U TRAINING DEVICES
U VISUAL AIDS
AUDIOLOGY
Circadian variation in the latency of brainstem responses and its relation to body temperature
p0108 A81-30400
AUDIOMETRY
Tables relating pure-tone audiometric threshold to age
[NPL-AC-94] p0055 N81-14616
The effect of noise on the vestibular system
p0208 N81-31455
Hearing conservation
p0209 N81-31472
AUDITORY DEFECTS
Implications of a critical level in the ear for assessment of noise hazard at high intensities
p0067 A81-20925
Some non-auditory correlates of the hearing threshold levels of an aviation noise-exposed population
p0205 A81-47104
Role of the middle ear muscle apparatus in mechanisms of speech signal discrimination
[NASA-TM-76408] p0036 N81-13628
Assessment of oxygen and carbogen therapy effect in Meniere's disease according to clinical and electroencephalographic data
[NASA-TM-76348] p0059 N81-15677
Rheoencephalography in Meniere's disease
[NASA-TM-76387] p0074 N81-16727
Meniere's disease: A surgeon's tactics
[NASA-TM-76398] p0113 N81-20719
Questions of diagnosing and treating Meniere's disease
[NASA-TM-76407] p0133 N81-22685
Evaluation of integral exposure energy load on aural analyzer of miners
[NASA-TM-76550] p0134 N81-22690
Screening for noise induced hearing loss in Norwegian Air Force
p0160 N81-26707
The effect of noise on the vestibular system
p0208 N81-31455
Effects of age, flying time and type of aircraft on the hearing of German military pilots, and its significance for inflight communication
p0209 N81-31469

Hearing impaired aviators in the U.S. Army
p0209 N81-31471
AUDITORY PERCEPTION
The sensitivity of the auditory and tactile sensory systems upon separate and simultaneous stimulation
p0045 A81-17087
Implications of a critical level in the ear for assessment of noise hazard at high intensities
p0067 A81-20925
On the binaural processing of stimuli with different interaural phase relations --- Thesis
p0067 A81-21450
Stability of individual loudness functions obtained by magnitude estimation and production
p0087 A81-25775
Detectability and annoyance of repetitive impulsive sounds
p0204 A81-46680
Effects of low power microwaves on the local cerebral blood flow of conscious rats
[AD-A090426] p0031 N81-12720
Meniere's disease: A surgeon's tactics
[NASA-TM-76398] p0113 N81-20719
AUDITORY SENSATION AREAS
The sensitivity of the auditory and tactile sensory systems upon separate and simultaneous stimulation
p0045 A81-17087
Meniere's disease: A surgeon's tactics
[NASA-TM-76398] p0113 N81-20719
AUDITORY SIGNALS
Assessing the effectiveness of auditory warnings
p0209 N81-31457
AUDITORY STIMULI
The sensitivity of the auditory and tactile sensory systems upon separate and simultaneous stimulation
p0045 A81-17087
On the binaural processing of stimuli with different interaural phase relations --- Thesis
p0067 A81-21450
Analysis and modeling of the cephalic response of a human operator subjected to binaural stimulation in a sound localization task --- French thesis
p0068 A81-21923
AUDITORY TASKS
Development of a secondary task method for measuring operator workload. II - A change of secondary task performance with acquisition of flying skill by Link Trainer
p0069 A81-21987
AUSTRALIA
Records of Australian fouling organisms: Sessile barnacles (crustacea, cirripedia)
[MRL-R-809] p0209 N81-31609
A comparison of possible methods for marine fouling assessment during raft trials
[MRL-R-808] p0233 N81-33769
AUTOCATALYSIS
A theory for the origin of a self-replicating chemical system. I - Natural selection of the autogen from short, random oligomers
p0043 A81-16707
AUTOCLAVES
System for sterilizing objects --- cleaning space vehicle systems
[NASA-CASE-KSC-11085-1] p0149 N81-24724
AUTOCOLLIMATORS
U COLLIMATORS
AUTOMATA THEORY
Some aspects of sensing the ambient medium --- by robots
p0001 A81-10050
The design of industrial robots --- Russian book
p0019 A81-13063
Supervisory control of manipulators --- Russian book
p0131 A81-33775
Machine intelligence and robotics: Report of the NASA study group
[NASA-TM-82329] p0121 N81-21769
Automation in organisations: Eternal conflict
[NASA-TM-81290] p0150 N81-24725
AUTOMATIC CONTROL
NT ADAPTIVE CONTROL
NT AUTOMATIC FLIGHT CONTROL
NT DYNAMIC CONTROL
NT FEEDBACK CONTROL
NT LEARNING MACHINES
NT NUMERICAL CONTROL
NT OPTIMAL CONTROL
Advanced control techniques for teleoperation in earth orbit
p0072 A81-22610
Regulation of the tracking movements of the eyes under various conditions of visual perception
p0124 A81-30744
The design of two-sided-action servo systems --- Russian book on remote manipulators
p0127 A81-31875
Automatic planning of manipulator transfer movements
[AD-A096118] p0121 N81-21773
Pilot interaction with automated airborne decision making systems
[NASA-CR-164729] p0213 N81-31847
AUTOMATIC CONTROL VALVES
NT PRESSURE REGULATORS
NT RELIEF VALVES
AUTOMATIC DATA PROCESSING
U DATA PROCESSING
AUTOMATIC FLIGHT CONTROL
Flight-deck automation - Promises and problems
p0047 A81-17497
AUTOMATIC PATTERN RECOGNITION
U PATTERN RECOGNITION
AUTOMATIC ROCKET IMPACT PREDICTORS
U COMPUTERIZED SIMULATION
U IMPACT PREDICTION
AUTOMATION
A three roll wrist robot
[SME PAPER MS80-699] p0202 A81-45666
Compilation of a catalog of manipulator arms and industrial robots
[CETIM-1-4N-02-0-X] p0151 N81-24731
AUTONOMIC NERVOUS SYSTEM
NT SYMPATHETIC NERVOUS SYSTEM
The role of the vegetative nervous system in the regulation of glucose absorption in the intestine during motion sickness
p0006 A81-24932
AUTOPSIES
Postmortem coronary atherosclerosis findings in general aviation accident pilot fatalities - 1975-77
p0071 A81-22109
Postmortem coronary atherosclerosis finding in general aviation accident pilot fatalities: 1975 - 1977
[AD-A089428] p0015 N81-10693
AUTOREGRESSIVE PROCESSES
Experimental studies on the estimation of the dynamic characteristics of the human operator
p0221 A81-48189
AUTOTROPHS
Automatic control of gas exchange in the autotrophic component of a life support system for heterotrophic organisms
p0013 N81-10680
AVIATION
U AERONAUTICS
AVIATORS
U AIRCRAFT PILOTS
AVIONICS
Computer-based simulations for man-computer system design --- for aircraft weapon systems
p0222 A81-48374
Real time simulation of OAS Phase I controls and displays --- Offensive Avionics System from human engineering standpoint
p0222 A81-48375
Designer's guide for the panel program
[AD-A093989] p0080 N81-17712
A preliminary study of head-up display assessment techniques. 2: HUD symbology and panel information search time
[NASA-TM-78536] p0138 N81-23799
Human Resources, logistics and cost factors in weapon system development Demonstration in the full scale development phase of aircraft system acquisition
[AD-A096731] p0155 N81-25682
AVOIDANCE
NT COLLISION AVOIDANCE
Avoidance learning and mechanism of the protective effect of apomorphine against hypoxia
p0142 A81-34305

AXES (REFERENCE LINES)
NT EARTH AXIS
AXES OF ROTATION
NT EARTH AXIS
AXIAL COMPRESSION LOADS
A viscoelastic finite element model of the human intervertebral joint
[AD-A094774] p0099 N81-19764
AXIAL LOADS
NT AXIAL COMPRESSION LOADS
AXIOMS
Terms and axioms for a theory of human-machine systems
p0138 N81-23796
AXONS
Local existence for the Cauchy problem of a reaction-diffusion system with discontinuous nonlinearity
[AD-A100564] p0188 N81-28744
One way traffic of pulses in a neuron --- axon shape effects
[NC-TW-213/81] p0208 N81-30796

B

B-52 AIRCRAFT
New training realism for B-52 crews
[AD-A100571] p0189 N81-28749
BABOONS
Thermoregulatory and arterial baroreflex control of heart rate in the heat-stressed baboon
p0147 N81-24707
BACILLUS
Response of bacillus subtilis spores to heavy ion irradiation using cellulose nitrate detectors
p0207 N81-30792
BACK INJURIES
Backache in helicopter pilots
p0224 A81-49953
Spine immobilization apparatus
[NASA-CASE-ARC-11167-1] p0152 N81-25662
BACKGROUND NOISE
Detection of noisy visual targets - Models for the effects of spatial uncertainty and signal-to-noise ratio
p0181 A81-42627
Efficiency of human visual signal discrimination
p0222 A81-48225
BACTERIA
NT BACILLUS
NT CLOSTRIDIUM BOTULINUM
NT ESCHERICHIA
NT NITROBACTER
Formation of double-strand breaks in the DNA of gamma-irradiated bacteria, depending on the functioning of processes of fast repair of single-strand breaks of DNA
p0001 A81-10464
The nucleotide sequence of Beneckea harveyi 5S rRNA --- bioluminescent marine bacterium
p0132 A81-33800
Archaebacteria --- phylogenetic implications
p0141 A81-34040
Mechanisms of recombination and function of DNA in bacteria
[DOE/EV-03941/52] p0031 N81-12721
The bacterial production of methane in marine sediments
p0091 N81-18626
Status of consonant bifidoflora before and after space flights
p0191 N81-29738
Effects of accelerated heavy ions on bacillus subtilis spores: Inactivation, repair and mutation induction
p0207 N81-30787
Novel approach to the growth of anaerobic microorganisms
[CONF-810554-1] p0207 N81-30790
BACTERICIDES
Spacecraft surgical scrub system
[NASA-CR-160882] p0017 N81-11631
BACTERIOLOGY
Bacteriological methods in water quality control programs: Instructor's guide for completing the course
[PB81-156697] p0152 N81-25659
Novel approach to the growth of anaerobic microorganisms
[CONF-810554-1] p0207 N81-30790
BACTERIOPHAGES
Membrane-membrane interactions in a lipid-containing bacteriophage system
[DOE/EV-03211/32] p0210 N81-31813
BAGS
NT GAS BAGS
BANDPASS FILTERS
A bandpass filter for the enhancement of an X-ray reconstruction of the tissue in the spinal canal
p0039 A81-16625
BARDEEN APPROXIMATION
U SURFACE PROPERTIES
BAROMETRIC PRESSURE
U ATMOSPHERIC PRESSURE
BATHS
NT SALT BATHS
BEAMS (RADIATION)
NT ELECTRON BEAMS
NT ION BEAMS
BED REST
Effects of antiorthostatic bedrest on the cardiorespiratory responses to exercise
p0126 A81-31544
The functional condition of the adrenal cortex and kidneys of a healthy man during prolonged antiorthostatic hypokinesia
p0201 A81-44896
The regulation of calcium exchange under conditions of prolonged antiorthostatic hypokinesia
p0201 A81-44897
The negative effect of hypokinesia involving injury and preventive measures
[NASA-TM-76562] p0171 N81-27787
BEES
Environmental assessment for the Satellite Power System (SPS): Studies of honey bees exposed to 2.45 GHz continuous wave electromagnetic energy
[NASA-CR-164223] p0133 N81-22679
BEETLES
NT TRIBOLIA
BEHAVIOR
NT HUMAN BEHAVIOR
The effect of a constant and uniform magnetic field on mouse brain - A study by magnetic nuclear resonance
p0205 A81-47105
Preliminary study of the behavioral and biological effects of high intensity 60 Hz electric fields
[SWRI-14-5277] p0061 N81-15691
Relative toxicity testing of spacecraft materials. 2: Aircraft materials
[NASA-CR-160907] p0075 N81-16732
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] p0231 N81-32657
Evaluation of short-term bioassays to predict functional impairment, development of neurobehavioral bioassays in laboratory animals, directory of institutions/individuals
[AD-A104225] p0233 N81-33770
BELL AIRCRAFT
NT UH-1 HELICOPTER
BENCHES
U SEATS
BENDS (PHYSIOLOGY)
U DECOMPRESSION SICKNESS
BENZENE POISONING
Intertissue variation in benzo(a)pyrene metabolism by human skin, lung and liver in vitro
p0173 N81-27798
BETA PARTICLES
An approach to the mechanism of the asymmetrical radical formation in yttrium-90-beta-irradiated D- and L-alanines
p0127 A81-32054
Beta irradiation may induce stereoselectivity in the crystallization of optical isomers
p0128 A81-32056
BIAS
NT RESPONSE BIAS
BIBLIOGRAPHIES
Chemical evolution and the origin of life - Bibliography supplement 1978
p0048 A81-17990

BIOLOGICAL EVOLUTION
NT ABIOGENESIS
The assembly and properties of protobiological structures - The beginnings of cellular peptide synthesis
p0027 A81-15475
A similarity ring for amino acids based on their evolutionary substitution rates
p0047 A81-17987
Microfossil-like objects from the Archaean of Greenland - A cautionary note
p0048 A81-18049
Hominid evolution and SETI
p0072 A81-23093
The search for early forms of life in other planetary systems - Future possibilities afforded by spectroscopic techniques
p0087 A81-25638
Solar rotation and activity in the past and their possible influence upon the evolution of life
p0126 A81-31652
Generation and amplification of chirality in chemical systems; Proceedings of the Second International Symposium, Universitaet Bremen, Bremen, West Germany, July 16-18, 1980
p0127 A81-32052
An approach to the mechanism of the asymmetrical radical formation in yttrium-90-beta-irradiated D- and L-alanines
p0127 A81-32054
Investigations of electron helicity in optically active molecules using polarized beams of electrons and positrons
p0127 A81-32055
Reflections on the origin of optical asymmetry on earth
p0128 A81-32057
A new idea and experiment related to the possible interaction between magnetic field and stereoselectivity --- in generation of chirality during chemical evolution
p0128 A81-32059
Unconsidered sources of chirality in nature --- global asymmetries of earth rotation and atmospheric electric fields related to biological evolution
p0128 A81-32060
Experiments on the abiotic amplification of optical activity
p0128 A81-32062
Enantiomer enrichment in early peptides
p0128 A81-32063
Critical evaluation of mathematical models for the amplification of chirality
p0129 A81-32064
Conservation of optical purity of amino acids - A principal problem in biochemical and protobiochemical systems
p0129 A81-32065
Archaebacteria --- phylogenetic implications
p0141 A81-34040
The estimation of genetic divergence
p0161 A81-40200
Life from an orderly cosmos
p0179 A81-42137
Amino acids of the Murchison meteorite. I - Six carbon acyclic primary alpha-amino alkanoic acids
p0202 A81-45495
Reasons for the occurrence of the twenty coded protein amino acids
p0202 A81-45496
Recent progress in exobiology and planetary biology
[IAF PAPER 81-308] p0219 A81-47447
The evolutionary development of vertebrate thermoregulation
p0221 A81-48119
Origin of life between Scylla and Charybdis --- computerized simulation of primordial chemical evolution
p0223 A81-48725
Geomagnetic field - Its role in the evolution of life and intelligence on earth
p0224 A81-49917
Publications of the Exobiology Program for 1980: A special bibliography
[NASA-TM-83808] p0233 N81-32869

BIOLOGICAL MODELS
U BIONICS

BIOLOGICAL MODELS (MATHEMATICS)
Model for antiorthostatic hypokinesia - Head-down tilt effects on water and salt excretion
p0002 A81-10619
On the role of dynamic models in quantitative posturography
p0004 A81-11231
Electromagnetic-energy deposition in an inhomogeneous block model of man for near-field irradiation conditions
p0039 A81-16505
The response of a realistic computer model for sitting humans to different types of shocks
p0072 A81-22550
A hypothalamic model of adaptation and deadaptation under altitude hypoxia and the controllable effect on the reactivity and resistance of the organism
p0085 A81-24929
Critical evaluation of mathematical models for the amplification of chirality
p0129 A81-32064
A generalized transfer function for describing mechanoneural semicircular-canal dynamics
p0079 N81-17707
Application of mathematical modeling to analysis of immunological phenomena
p0191 N81-29737
Mathematical modeling of human cardiovascular system reactions during postural and exercise tests --- effects of gravity factors
p0191 N81-29743
MYOSIM, a computer program for simulating myocybernetic models of skeletal muscle
[CSIR-TWISK-176] p0195 N81-29770
Discrete approximation of a continuous myocybernetic model of skeletal muscle
[CSIR-SWISK-18] p0195 N81-29771

COOLING SYSTEMS
Biofouling control with ozone at the Bergen Generating Station
[EPRI-CS-1629] p0133 N81-22677
COORDINATION
The coordination of eye and head movements during the gaze fixation reaction
p0106 A81-29316
COPILOTS
U AIRCRAFT PILOTS
CORIOLIS EFFECT
Dependence of vestibular reactions on frequency of action of sign-variable accelerations
[NASA-TM-76410] p0090 N81-19757
CORN
Feasibility study for anaerobic digestion of agricultural crop residues, 1980 update
[SERI/TR-98175-1] p0190 N81-29731
CORNEA
A method for semi-automatic analysis of eye movements
[ESA-TT-475] p0015 N81-10695

Theoretical and observational analysis of individual ionizing particle effects in biological tissue
[LBL-11147-REV] p0230 N81-32847
CORONARY ARTERY DISEASE
Methodologic problems of exercise testing for coronary artery disease - Groups, analysis and bias
p0005 A81-11720
Coronary bypass in an airline pilot
p0006 A81-12242
Suspected coronary artery disease among military aviation personnel
p0006 A81-12243
Detection of coronary artery disease in asymptomatic aircrew members with thallium-201 scintigraphy
p0023 A81-13511
Echocardiographic detection of coronary artery disease
p0041 A81-16658
Exercise radionuclide imaging approaches to coronary artery disease
p0041 A81-16659
Detection and management of the asymptomatic patient with coronary artery disease
p0064 A81-19717
Does exercise protect from coronary artery disease
p0064 A81-19718
The role of biochemical factors in ventricular dysrhythmia accompanying ischemia
p0064 A81-19720
Postmortem coronary atherosclerosis findings in general aviation accident pilot fatalities - 1975-77
p0071 A81-22109
Eight-year follow-up of exercise electrocardiograms in healthy, middle-aged aviators
p0126 A81-31545
Comparative sensitivity and specificity of exercise electrocardiographic lead systems
p0143 A81-36649
Toward the optimal lead system and optimal criteria for exercise electrocardiography
p0143 A81-36650
Risk of coronary heart disease - Risk analysis in the clinical practice of aerospace medicine using a programmable calculator
p0206 A81-47111
Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning
p0223 A81-49328
A histopathological study of coronary arteries in aircrew fatalities during 1962-1978
p0224 A81-49951
Sixth advanced operational aviation medicine course
[AGARD-R-681] p0211 N81-31827
Non-invasive evaluation of the coronary circulation
p0211 N81-31828
Treadmill testing for the detection of asymptomatic coronary disease in the healthy male
p0212 N81-31833
Epidemiological basis for the prevention of coronary heart disease
p0212 N81-31835
Prevention of cardiovascular diseases
p0212 N81-31836
CORONARY CIRCULATION
Myocardial adenosine and coronary resistance during increased cardiac performance
p0003 A81-10773
Coronary blood flow during +Gz stress in +Gz conditioned adult miniature swine
p0005 A81-12233
Cardiac decompression sickness - Report and discussion of a case
p0145 A81-37209
Total and regional distribution of coronary blood flow during hypoxia
p0133 N81-22681
The effect of short-term antiorthostatic hypokinesia on central and intracardiac hemodynamics and metabolism of a healthy person
[NASA-TM-76525] p0134 N81-22689
Non-invasive evaluation of the coronary circulation
p0211 N81-31828

NT WEAK ENERGY INTERACTIONS
Chlorophyll-quinone photochemistry in liposomes: Mechanisms of radical formation and decay [DOE/ER-04927/T3] p0151 N81-25656
DECEPTION
Effects of low power microwaves on the local cerebral blood flow of conscious rats [AD-A090426] p0031 N81-12720
DECIDUOUS TREES
The changes in leaf reflectance of sugar maple seedlings (Acer saccharum Marsh) in response to heavy metal stress [NASA-TM-82150] p0190 N81-29729
DECISION MAKING
Human decision making in aircraft control systems --- Russian book p0019 A81-13055
Some human factors aspects of computer-aiding concepts for air traffic controllers p0021 A81-13417
Mental workload in decision and control p0065 A81-20499
How well do probability experts assess probabilities? [AD-A089619] p0016 N81-10701
Monitoring and decision making by people in man machine systems [NASA-CR-164026] p0080 N81-17715
Uncertainty measurement in a complex task as a function of response mode and event type

characteristics
[AD-A097678] p0137 N81-23792
A model to measure bombardier/navigator performance during radar navigation in device 2F/14, A-6E weapon system trainer
[AD-A098776] p0155 N81-25680
A systems engineering evaluation method for piloted aircraft and other man-operated vehicles and machines with hypothetical example of a systems evaluation and quantified system performance-workload rating scales
[AD-A099196] p0174 N81-27808
Pilot interaction with automated airborne decision making systems
[NASA-CR-164729] p0213 N81-31847
Comprehension and analysis of information in text. 4: Decision and verification processes
[AD-A102677] p0232 N81-32863

DECISION THEORY
Processes of informal reasoning and relationships between informal and formal reasoning in problem solving
[AD-A095130] p0100 N81-19770

DECOMPOSITION
NT GLYCOLYSIS
NT PHOTOLYSIS
NT THERMAL DECOMPOSITION
Effectiveness of decomposition of plant waste by microorganisms under aerobic conditions
p0235 N81-33784

DECOMPRESSION
U PRESSURE REDUCTION

DECOMPRESSION SICKNESS
Pathophysiology of inner ear dysfunction in the squirrel monkey in rapid decompression
p0043 A81-16682
Optimization of decompression on the basis of chest impedance
p0124 A81-30746
Cardiac decompression sickness - Report and discussion of a case
p0145 A81-37289
Chokes - Favorable response to delayed recompression therapy: A case report
p0206 A81-47110
XDC-2 digital decompression computer: Assessment of decompression profiles by ultrasonic monitoring, phase 1, 36-54 MSW
[AD-A090467] p0032 N81-12729
Hyperbaric oxygenation. Citations from the NTIS data base
[PB80-813769] p0033 N81-12735
Current perspectives in hyperbaric physiology, ultrasonic Doppler bubble detection, and mass spectrometry
[AD-A082519] p0098 N81-19760

DECONTAMINATION
NT SPACECRAFT STERILIZATION
Environmental contaminants in food. Volume 2, part B: Working papers
[PB-116774] p0080 N81-17716

DEFECTS
NT AUDITORY DEFECTS

DEFINITION
Concepts and definitions --- in aviation psychology and aircraft pilot behavioral engineering
p0028 A81-15677

DEFLATING
U INFLATABLE STRUCTURES
U PRESSURE REDUCTION

DEGENERATION
Changes in physical fitness due to variations in physical activity and diet
p0168 N81-26701

DEGRADATION
NT THERMAL DEGRADATION

DEHYDRATION
Effect of dehydration on thermoregulation in cats exposed to high ambient temperatures
p0178 A81-41787
The physiological effects of dehydration caused by sweat loss --- athletes
[NASA-TM-75893] p0120 N81-21761

DEKATRONS
U COUNTERS

DEMINERALIZING
NT BONE DEMINERALIZATION

DENITROGENATION
Biological reduction of nitrate wastewater using fluidized-bed bioreactors
[CONF-810554-2] p0209 N81-31812

DENSITY (MASS/VOLUME)
NT GAS DENSITY

DENSITY (NUMBER/VOLUME)
NT ION DENSITY (CONCENTRATION)

DENSITY MEASUREMENT
NT PHOTON ABSORPTIOMETRY

DENTISTRY
Periodontal disease in military aircrew members - A clinical and radiographical study
p0145 A81-37290
Acoustic tooth cleaner
[NASA-CASE-LAR-12471-1] p0031 N81-12724

DEOXYRIBONUCLEIC ACID
Formation of double-strand breaks in the DNA of gamma-irradiated bacteria, depending on the functioning of processes of fast repair of single-strand breaks of DNA
p0001 A81-10464
The origin of genetic information
p0104 A81-20612
Modelling of DNA-protein recognition
p0180 A81-42227
Molecular basis of the mutagenic and lethal effects of ultraviolet irradiation
[DOE/EV-02814/1] p0017 N81-11629
Mechanisms of recombination and function of DNA in bacteria
[DOE/EV-03941/52] p0031 N81-12721
Radiation biophysics research
[LBL-11700] p0209 N81-31811
Repair and cell cycle response in cells exposed to environmental biohazards
[DOE/EV-04568/T1] p0210 N81-31814
Molecular basis of the mutagenic and lethal effects of ultraviolet irradiation
[DE81-028535] p0230 N81-32849

DEPENDENCE
NT TIME DEPENDENCE

DEPLOYMENT
Rapid transmeridian deployment: Cognitive performance and chronobiologic prophylaxis for circadian dyschronism
[AD-A090393] p0032 N81-12727

DEPRESSANTS
NT CENTRAL NERVOUS SYSTEM DEPRESSANTS

DEPRESSURIZATION
U PRESSURE REDUCTION

DEPRIVATION
NT SLEEP DEPRIVATION
NT WATER DEPRIVATION

DEPTH PERCEPTION
U SPACE PERCEPTION

DERMATOLOGY
Chronic dermal toxicity of epoxy resins. 1: Skin carcinogenic potency and general toxicity
[ORNL-5762] p0196 N81-29776

DESATURATION
Metabolism of fatty acids in rat brain in microsomal membranes
[UCLA-12/1289] p0147 N81-24710

DESCENT
NT PARACHUTE DESCENT

DESCENT TRAJECTORIES
Human factors by descent energy management
p0065 A81-20467

DESERT ADAPTATION
Physiological responses of men and women to prolonged dry heat exposure
p0005 A81-12231

DESERTS
Heat stress in the A-10 cockpit - Flights over desert
p0205 A81-47101

DESIGN
An anthropometric data base for commercial design applications, phase 1
[PB81-211070] p0240 N81-33824

DESIGN ANALYSIS
The design of two-sided-action servo systems --- Russian book on remote manipulators
p0127 A81-31075
Fault diagnostic instrumentation design for environmental control and life support systems
[NASA-CR-152309] p0095 N81-18656

Man-Machine Interface (MMI) requirements definition and design guidelines
[AD-A096705] p0136 N81-22704
The development and airborne testing of the FALS seat
[AD-A103663] p0240 N81-33821
DESIGN OF EXPERIMENTS
U EXPERIMENTAL DESIGN
DETECTION
NT AIRCRAFT DETECTION
NT REMOTE SENSING
NT SIGNAL DETECTION
NT TARGET RECOGNITION
Investigations related to evaluation of ultramicrofluorometer
[NASA-CR-163972] p0091 N81-18627
Visual detection model for structured targets (Penval Program)
[AD-A096084] p0120 N81-21766
Apparatus and process for microbial detection and enumeration
[NASA-CASE-LAR-12709-1] p0189 N81-29727
DEVITRIFICATION
U CRYSTALLIZATION
DIAGNOSIS
Characteristics of the clinical picture and diagnosis of uncomplicated peptic ulcers in flight personnel
p0001 A81-10375
Cross-sectional echocardiography - Physical principles, anatomic planes, limitations and pitfalls
p0040 A81-16651
Cardiac nuclear imaging - Principles, instrumentation and pitfalls
p0040 A81-16652
Current status of radionuclide imaging in valvular heart disease
p0040 A81-16656
Two dimensional echocardiography in congenital heart disease
p0041 A81-16663
Two-dimensional echocardiography - Methodology and application in clinical cardiology
p0063 A81-19714
Electrocardiographic stress testing - The debate goes on /probably/
p0064 A81-19716
Detection and management of the asymptomatic patient with coronary artery disease
p0064 A81-19717
Premature ventricular complexes - Therapeutic dilemmas and decisions
p0064 A81-19719
Use of tympanometry in an airline medical service
p0090 A81-26775
Eight-year follow-up of exercise electrocardiograms in healthy, middle-aged aviators
p0126 A81-31545
The Wolff-Parkinson-White pattern in healthy aircrew --- heart disease diagnostics
p0206 A81-47109
Comparative assessment of prognosis of the stop stimulus and trapezoidal rotation programs
[NASA-TM-76336] p0059 N81-15676
Orthostasis test in the practice of the cardiologist
[NASA-TM-76324] p0059 N81-15679
Construction of pulse echo ultrasonic test equipment and acquisition of tissue signature data
[PB80-221880] p0061 N81-15692
NASA: Biomedical Applications Team
[NASA-CR-166636] p0092 N81-18635
Fault diagnostic instrumentation design for environmental control and life support systems
[NASA-CR-152309] p0095 N81-18656
Remote Medical Diagnosis System (RMDS): Evaluation of the AN/FTA-28 telephone terminal interface
[AD-A094831] p0099 N81-19762
Detection of coronary artery disease in asymptomatic aircrew members with thallium-201 scintigraphy
p0169 N81-26713
Pilots with cardiological problems: Ten year follow up
p0169 N81-26714
Medical diagnosis system and method with multispectral imaging --- depth of burns and optical density of the skin
[NASA-CASE-NPO-14402-1] p0171 N81-27783
Non-invasive evaluation of the coronary circulation
p0211 N81-31828
Treadmill testing for the detection of asymptomatic coronary disease in the healthy male
p0212 N81-31833
Continuous recording of the ECG according to the Holter method
p0212 N81-31834
Disposition of electrocardiographic abnormalities in aviation
p0212 N81-31838
DIAPHRAGM (ANATOMY)
Diaphragmatic and genioglossal electromyogram responses to CO2 rebreathing in humans
p0131 A81-33726
DIASTOLE
Dynamics of diastolic phase structure during a 140 day space flight
p0011 N81-10669
DIASTOLIC PRESSURE
An automated indirect blood pressure instrument based upon ultrasound
p0014 N81-10689
DIELECTRIC CONSTANT
U PERMITTIVITY
DIELECTRIC PROPERTIES
NT PERMITTIVITY
Dielectric behavior of selected animal tissues in vitro at frequencies from 2 to 4 GHz
p0125 A81-31167
DIESEL ENGINES
Health Effects of Diesel Engine Emissions: Proceedings of an international symposium held at Cincinnati, Ohio on December 3-5, 1979, volume 1
[PB81-173809] p0196 N81-29777
Health Effects of Diesel Engine Emissions: Proceedings of an international symposium
[PB81-173817] p0196 N81-29778
DIESEL FUELS
Toxic hazards research unit
[AD-A091617] p0149 N81-24719
DIETS
Effect of low-potassium diet on rat exercise hyperthermia and heatstroke mortality
p0177 A81-41785
Effect of exercise, vitamin and mineral supplements on reproductive function of albino rats during prolonged hypokinesia
p0013 N81-10677
State of peripheral blood as related to altered diet and stress --- space flight feeding
p0118 N81-21746
Dietary protection against pulmonary oxygen poisoning
[AD-A097750] p0150 N81-24727
Histamine and serotonin levels in man in the presence of nervous-emotional stress
p0183 N81-28705
DIFFERENTIAL EQUATIONS
NT PARTIAL DIFFERENTIAL EQUATIONS
Control of walking machines --- Russian book
p0103 A81-27533
DIFFERENTIAL OPERATORS
U DIFFERENTIAL EQUATIONS
DIFFERENTIAL PRESSURE
Aortic blood flow estimation from pressure measurements
p0092 N81-18632
DIFFRACTION
NT X RAY DIFFRACTION
DIFFRACTION GRATINGS
U GRATINGS (SPECTRA)
DIFFUSION
NT GASEOUS DIFFUSION
Nerve impulse propagation in a branching nerve system: A simple model
[NC-TW-203/80] p0055 N81-14617
Autoregulation of cerebral blood circulation under orthostatic tests
[NASA-TM-76372] p0074 N81-16725
DIFFUSION EFFECT
U DIFFUSION
DIGESTING
Full scale field demonstration of unheated anaerobic contact stabilization
[DOE/CS-24310/2] p0147 N81-24709

Feasibility study for anaerobic digestion of agricultural crop residues, 1980 update
[SERI/TR-98175-1] p0190 N81-29731
Study of digestive tract microflora of Soyuz-13 and Salyut-4 crews
p0234 N81-33783
DIGESTIVE SYSTEM
NT GASTROINTESTINAL SYSTEM
NT INTESTINES
NT PANCREAS
NT TEETH
The action of simulated and true weightlessness on the digestive tract of rats
p0164 A81-40378
Efficacy of alimentary factors in the recovery period following long-term antiorthostatic hypokinesia
p0118 N81-21747
Sensitivity to antibiotics of lactobacilli from digestive tract of Soyuz-13 and Salyut-4 crew members
p0234 N81-33782
DIGITAL COMPUTERS
NT MICROCOMPUTERS
A user guide to the DCIEM XDC-1 Digital Compression Calculator
[AD-A096746] p0153 N81-25671
DIGITAL DATA
Visual effects of sampling in digital picture processing. A pilot study
[FOA-C-53001-H9] p0016 N81-10702
DIGITAL SYSTEMS
Digital image processing systems and an approach to the display of colors of specified chrominance
[AD-A089587] p0015 N81-10694
Digital control system for an on board oxygen generator
[AD-A100823] p0196 N81-29780
Measuring sleep by wrist actigraph
[AD-A103196] p0238 N81-33807
DIGITAL TECHNIQUES
Digital image processing of two dimensional echocardiograms - Identification of the endocardium
p0204 A81-46524
DIGITAL TO ANALOG CONVERTERS
ECG-converter --- normal television receiver interface
[BMFT-FB-T-80-111] p0238 N81-33810
DIGITIZERS
U ANALOG TO DIGITAL CONVERTERS

[NASA-TM-76364] p0060 N81-15682
Measuring sleep by wrist actigraph
[AD-A103196] p0238 N81-33807
ELECTROLYSIS
Fractional capacity electrolyzer development for CO2 and H2O electrolysis
[NASA-CR-166149] p0121 N81-21770
ELECTROLYTE METABOLISM
Model for antiorthostatic hypokinesia - Head-down tilt effects on water and salt excretion
p0002 A81-10619
Fluid-electrolyte homeostasis and weightlessness
p0011 N81-10664
Effect of long-term hypokinesia on the electrolytic composition of the blood in patients with osteoarticular tuberculosis
[NASA-TM-76325] p0059 N81-15680
ELECTROLYTES
The effects of different levels of motor activity on sweat electrolyte composition
p0123 A81-30740
Medical applications of ion sensitive field effect transistors
p0148 N81-24714
ELECTROLYTIC CELLS
Fractional capacity electrolyzer development for CO2 and H2O electrolysis
[NASA-CR-166149] p0121 N81-21770
ELECTROMAGNETIC ABSORPTION
NT X RAY ABSORPTION
Electromagnetic-energy deposition in an inhomogeneous block model of man for near-field irradiation conditions
p0039 A81-16505
Measurements of the RF power absorption in spheroidal human and animal phantoms exposed to the near field of a dipole source
p0125 A81-31165
Charge separation in the light reactions of photosynthesis
[LBL-11449] p0057 N81-15665
ELECTROMAGNETIC CONTROL
U REMOTE CONTROL
ELECTROMAGNETIC FIELDS
NT NEAR FIELDS
Development of a new noninvasive method to determine the integrity of bone in vivo
[NASA-CR-160922] p0113 N81-20722
Electromagnetic field interactions with the human body: Observed effects and theories
[NASA-CR-166661] p0153 N81-25668
Tissue interaction with nonionizing electromagnetic fields
[DE81-027654] p0231 N81-32658
ELECTROMAGNETIC INTERACTIONS
Review of the origin of asymmetry of biomolecules through weak interaction The latest developments
p0127 A81-32053
A new idea and experiment related to the possible interaction between magnetic field and stereoselectivity --- in generation of chirality during chemical evolution
p0128 A81-32059

GAME THEORY
A stochastic differential game theory approach to
human operators in adversary tracking encounters
p0067 A81-21023
GAMMA RADIATION
U GAMMA RAYS
GAMMA RAYS
Formation of double-strand breaks in the DNA of
gamma-irradiated bacteria, depending on the
functioning of processes of fast repair of
single-strand breaks of DNA
p0001 A81-10464
The role of weightlessness in the genetic damage
from preflight gamma-irradiation of organisms in
experiments aboard the Salyut 6 orbital station
p0164 A81-40376
Effectiveness of irradiation in killing pathogens
[SAND-80-7124C] p0034 N81-13619
Nuclear survivability/vulnerability of aircrews:
An experimental approach
[AD-A095501] p0114 N81-20729
Study of mass-inertia characteristics of human
body segments during 6-month hypokinesia by the
gamma scanning method
p0117 N81-21743
Study of mouse mortality after exposure to helium
ions with administration of tilorone
p0105 N81-20719
Effect on mouse skin of radiation differing in
linear energy transfer
p0193 N81-29753
Effect of chronic Gamma irradiation on protein
composition and cholesterol content of canine
blood
p0235 N81-33786
GANGLIA
NT NERVES
NT NEURONS
Research on ganglion cell responses after laser
exposure of the retina
[AD-A087269] p0014 N81-10691
Visual acuity and the balance between receptor
density and ganglion cell receptive field overlap
[AD-A089607] p0060 N81-15689
GARBAGE
Development of a trash handling subsystem for a
manned spacecraft
[DBL-T-1496] p0062 N81-15700
GARMENTS
A comparison of three liquid-ventilation cooling
garments during treadmill exercise
p0158 A81-38849
Pilot outfit --- Russian book
p0165 A81-40624
Permeation of protective garment material by
liquid halogenated ethanes and a polychlorinated
biphenyl
[LA-8572-MS] p0115 N81-20732
Urine collection apparatus --- feminine hygiene
[NASA-CASE-MSC-18381-1] p0180 N81-28740
GAS ANALYSIS
Airscan: An ultrasensitive trace air impurity
analyzer for use in toxic aviation environments
p0174 N81-27804
Log-linear regression method used to assess
quality of air samples in fluoroplastic containers
p0236 N81-33796
GAS BAGS
Log-linear regression method used to assess
quality of air samples in fluoroplastic containers
p0236 N81-33796

GAS CHROMATOGRAPHY
Amino acids and hydrocarbons approximately 3,800-Myr old in the Isua rocks, southwestern Greenland
p0048 A81-18050
GAS COMPOSITION
NT CARBON DIOXIDE CONCENTRATION
Sources of microimpurity contamination of cabin atmospheres and their toxicological evaluation --- in spacecraft
p0084 A81-24544
GAS DENSITY
Respiratory reactions to changes in gas environment density at different rates of inspiratory flow
p0105 N81-28714
GAS DETECTORS
Triple redundant hydrogen sensor with in situ calibration
[NASA-CR-160862] p0062 N81-15701
GAS DISCHARGE COUNTERS
U COUNTERS
GAS EXCHANGE
The effect of pharmacological destruction of hypothalamic monoaminergic structures on body temperature and gaseous exchange at acute cooling of the organism
p0005 A81-11776
Exchanges of oxygen and carbon dioxide alter inert gas pattern in single-breath tests
p0089 A81-26445
Automatic control of gas exchange in the autotrophic component of a life support system for heterotrophic organisms
p0013 N81-10680
State of gas exchange in recumbent and orthostatic positions and under physical load in healthy persons of varying age, sex and body build

p0019 A81-13212
Prediction of pilot performance
p0028 A81-15687
Manipulation and measurement of concurrent-task
performances
p0028 A81-15688
Systems analysis of behavioral mechanisms ---
Russian book
p0087 A81-25572
The effects of cognitive and behavioral control on
post-stress performance
p0131 A81-33325
Towards a behavioral theory of bias in signal
detection
p0144 A81-37254
Individual psychological characteristics of pilots
which permit erroneous actions
p0145 A81-37349
Group intergroup relations in living human species
[AD-A087473] p0016 N81-10700
The role of conceptual structures in analyzing
operator behavior
[RISO-M-2217] p0101 N81-19775
Behavior as a common focus of toxicology and
nutrition
[UR-3490-1826] p0121 N81-21774
Neuronal adaptive mechanisms underlying
intelligent information processing
[AD-A101908] p0213 N81-31843
Organizational behavior --- bibliographies
[AD-A103625] p0240 N81-33819
HUMAN BEINGS
Effects of expiratory loading on respiration in
humans
p0002 A81-10620
Hominid evolution and SETI
p0072 A81-23093
Image analysis of human motion
p0062 N81-15698
Effects of long-term exposure to low levels of
ozone: A review
[AD-A094426] p0094 N81-18649
A motion cycle simulator for analysis and
optimization of human power
p0138 N81-23797
HUMAN BODY
Time dependency of whole-body vibration discomfort
p0019 A81-13214
Effects of whole-body vibration on spinal reflexes
in man
p0023 A81-13507
Electromagnetic-energy deposition in an
inhomogeneous block model of man for near-field
irradiation conditions
p0039 A81-16505
The response of a realistic computer model for
sitting humans to different types of shocks
p0072 A81-22550
Dependence of electromagnetic energy deposition
upon angle of incidence for an inhomogeneous
block model of man under plane-wave irradiation
p0104 A81-28387
Systems analysis of thermoregulation mechanisms in
the human organism
p0123 A81-30738
Measurements of the RF power absorption in
spheroidal human and animal phantoms exposed to
the near field of a dipole source
p0125 A81-31165
Body position stabilization - A fundamental
problem of postural regulation
p0177 A81-41779
Effects of whole-body vibrations on sensory motor
system performance in man
p0181 A81-43373
Variations in response to whole-body vibration -
Intensity dependent effects
p0222 A81-48500
The accuracy of screw axis analysis using position
data from anatomical motion studies
[AD-A089446] p0015 N81-10692
Image analysis of human motion
p0062 N81-15698
Use of an electrical resistance hygrometer to
measure human sweat rates
[NASA-TM-81223] p0077 N81-17692
Chemicals identified in human biological media, a
data base
[ORNL/EIS-163/V2-P2] p0097 N81-19751
The physiological effects of dehydration caused by
sweat loss --- athletes
[NASA-TM-75893] p0120 N81-21761
A motion cycle simulator for analysis and
optimization of human power
p0138 N81-23797
User's guide for COMBIMAN (computerized
biomechanical man-model), version 4
[AD-A097705] p0150 N81-24726
Male and female strength capabilities for
operating aircraft controls
[AD-A098256] p0150 N81-24730
Investigation of actual nutrition and food status
under conditions of limited mobility (hypokinesia)
[NASA-TM-76563] p0174 N81-27807

HUMAN CENTRIFUGES
Physiological criteria related to G tolerance in combat aircrew
p0168 N81-26702

HUMAN ENGINEERING
U HUMAN FACTORS ENGINEERING

HUMAN FACTORS ENGINEERING
New developments in cockpit human interfaces
p0004 A81-11629
Motor performance in relation to control-display gain and target width
p0007 A81-12256
Human factors in Mirage 2000 missions
p0008 A81-12755
Some human factors aspects of computer-aiding concepts for air traffic controllers
p0021 A81-13417
Aviation psychology --- Book
p0028 A81-15676
Concepts and definitions --- in aviation psychology and aircraft pilot behavioral engineering
p0028 A81-15677
Discrimination and manipulation in flight
p0028 A81-15678
Flight-deck automation - Promises and problems
p0047 A81-17497
Human factors by descent energy management
p0065 A81-20467
Crew station assessment using the Bioman modeling system
p0070 A81-22092
Requirements definition and design guidelines for the man-machine interface
p0107 A81-30232
Stereotypes for direction-of-movements of rotary controls associated with linear displays - The effects of scale presence and position, of pointer direction, and distances between the control and the display
p0125 A81-31290
Operator psychophysiology in man-machine systems --- Russian book
p0126 A81-31849
Effects of system display format on performance in a fault location task
p0130 A81-33147
Industrial design in space
p0131 A81-33721
Effect of training device on retention and transfer of a procedural task
p0159 A81-38871
Flight display dynamics revisited
p0159 A81-38872
Prediction and quickening in perspective flight displays for curved landing approaches
p0159 A81-38873
Optical and electro-optical devices in tactical reconnaissance - Some human factors issues
p0159 A81-39429
Biorhythms and work --- Russian book
p0204 A81-46795
Video terminals and informational interaction /Engineering and psychological aspects/ --- Russian book
p0205 A81-46923
On increasing reliability of cosmonaut-operator's activity
[IAF PAPER 81-255] p0219 A81-47427
Kinesthetic coupling between operator and remote manipulator
p0220 A81-47986
Computer-based simulations for man-computer system design --- for aircraft weapon systems
p0222 A81-48374
Real time simulation of OAS Phase I controls and displays --- Offensive Avionics System from human engineering standpoint
p0222 A81-48375
Systems engineering models of human-machine interaction --- Book
p0223 A81-49885
Backache in helicopter pilots
p0224 A81-49953
Aeromedical evaluation of aircrew with lower limb disabilities
p0224 A81-49954
A method for semi-automatic analysis of eye movements
[ESA-TT-475] p0015 N81-10695
Observed compensation for projective distortion of graphic displays
[AD-A090188] p0018 N81-11637
Evaluation of Army aviator human factors, fatigue, in a high threat environment
[AD-A090751] p0032 N81-12730
Anthropometry: Basic studies and applications. Citations from the NTIS data base
[PB80-813645] p0033 N81-12736
Visual scene perception in manual control
[NLR-MP-79045-U] p0034 N81-12743
Nonionizing electromagnetic radiation safety: A program of coordinated federal activities related to biological effects of nonionizing electromagnetic radiation (0-300 GHZ)
[PB80-211212] p0036 N81-13633
Head-up transition behavior of pilots with and without head-up display in simulated low-visibility approaches
[NASA-TP-1720] p0037 N81-13635
Human engineering design criteria for modern control/display components and standard parts
[AD-A091191] p0037 N81-13637
Crew stress and fatigue in the PAVE
[AD-A091668] p0055 N81-14620
Human factors problems in general aviation
[AD-A091670] p0056 N81-14625
Kinesimetric method and apparatus
[NASA-CASE-MSC-18929-1] p0062 N81-15699
Navy manager's guide for the design sections of MIL-H-46855
[AD-A092009] p0076 N81-16742
Human visual performance and flat panel display image quality
[AD-A092605] p0077 N81-16743
Magnitude of visual accommodation to a head-up display
[NASA-TP-1796] p0080 N81-17711
Ergonomic study of the influence of rotary vibrations
[BMVG-FBWT-79-33] p0080 N81-17714
A predictor of human visual performance (PREVIP) at form discrimination tasks
[AD-A093991] p0093 N81-18642
Use of a wetted cover to reduce heat stress in impermeable clothing
[AD-A094322] p0094 N81-18648
DSN human factors project
p0095 N81-18659
The effects of multiple anthropometric constraints on the accommodation of personnel in operational naval aircraft
[AD-A093626] p0096 N81-18664
The application of additive factors methodology to workload assessment in a dynamic system monitoring task
[AD-A094314] p0096 N81-18665
Comfort and convenience specifications for safety belts: Shoulder belt fit, pressure and pullout forces
[PB81-122152] p0101 N81-19776
Analysis of heart rate variability as an estimate of pilot workload in human engineering research
[ESA-TT-653] p0120 N81-21764
How a pilot looks at altitude
[NASA-TM-81967] p0135 N81-22697
Applications of event-related brain potentials in human engineering
[AD-A097007] p0135 N81-22698
Applications of event-related brain potentials in human engineering
[AD-A097542] p0138 N81-23795
Instructor/operator display evaluation methods
[AD-A097208] p0139 N81-23802
Male and female strength capabilities for operating aircraft controls
[AD-A098256] p0150 N81-24730
Locking mechanism for orthopedic braces
[NASA-CASE-GSC-12082-2] p0152 N81-25661
Evaluation of human power capacity through olympic weightlifting analyses
p0167 N81-26694
Color coding of displays, maps and images --- human factors engineering
[FOA-C-53003-H9] p0175 N81-27812
Cosmonautics and development of aviation medicine
p0187 N81-28734

Model management systems: An approach to decision support in complex organizations
[AD-A089339] p0187 N81-20738
Urine collection apparatus --- feminine hygiene
[NASA-CASE-MSC-18381-1] p0188 N81-20740
Development of molded, coated fabric joints: Fabric construction criteria for a spacesuit elbow joint
[NASA-CR-164629] p0189 N81-20750
An investigation of the effects of the DH-132 helmet suspension system upon perceived helmet weight under static conductions
[AD-A100392] p0189 N81-20751
A 10-zone thermal manikin for evaluation personnel protective garments in cold air and water immersion environments
[AD-A100397] p0189 N81-20753
Wind tunnel measurements of total force and extremity flail potential forces on a crew member in close proximity to a cockpit
[AD-A100917] p0196 N81-29775
A microcomputer based facility for psychoacoustic experimentation --- human factors engineering, warning systems
[ISVR-TR-109] p0208 N81-30797
Criteria for recommending lighting levels
[PB81-185126] p0208 N81-30798
Assessment of the use of human factors in the design of fossil-fired steam-generating systems
[EPRI-CS-1760] p0208 N81-30799
On the application of a TV-multipoint x-y tracker to the measurement of the transmissibility of human vibration --- a mechanical impedance model
p0213 N81-31846
Eye protection and tinted lenses
p0214 N81-31852
Problems arising from the wearing of head equipment
p0214 N81-31853
Lasers and protection of the eyes
p0214 N81-31854
Human performance in continuous operations: Description of a simulation model and user's manual for evaluation of performance degradation
[AD-A101950] p0214 N81-31856
Man and machine. An ergonometric perspective on various abilities, objectives and work patterns in the development of the system
[FOA-C-56020-H9] p0215 N81-31857
Evaluations of a modified crew seat for the Iroquois
[ARL/APP-REPT-00] p0232 N81-32865
Man-machine simulations in industrial systems. Volume 1: Narrative
[DE81-027802] p0232 N81-32868
Human engineering evaluation of the hyperbaric research facility
[AD-A103681] p0238 N81-33806
Selected research publications in cognitive visual technology reseach simulator studies: Supplemental techniques
[AD-A095633] p0239 N81-33815
Advanced computer image generation techniques exploiting perceptual characteristics
[AD-A103365] p0239 N81-33818
Anthropomorphic dummy positioning and repeatability measurements
[PB81-212367] p0240 N81-33825

HUMAN FACTORS LABORATORIES
Trends in Air Force simulation - Perspective from the Air Force Human Resources Laboratory Operations Training Division
[SAE PAPER 801184] p0142 A81-34197
A device for studying the turning reflex in small laboratory animals
p0185 N81-28717

HUMAN PATHOLOGY
Detection of coronary artery disease in asymptomatic aircrew members with thallium-201 scintigraphy
p0023 A81-13511
Value and limitations of two dimensional echocardiography in assessment of cardiomyopathy
p0041 A81-16661
Potential effects of zero gravity /space flight/ on oncogenesis
p0132 A81-33848
Biological flows
[DGLR PAPER 81-001] p0219 A81-47574
A histopathological study of coronary arteries in aircrew fatalities during 1962-1578
p0224 A81-49951
Cardiac arrhythmias in service personnel - An electrophysiologic evaluation
p0225 A81-49956
Evaluation of thermal strain index for assessment of tolerance to heat stress
p0225 A81-49959
Scientific rationale for the selection of toxicity testing methods: Human health assessment
[ORNL/EIS-151] p0120 N81-21762

HUMAN PERFORMANCE
NT ASTRONAUT PERFORMANCE
NT BLACKOUT PREVENTION
NT OPERATOR PERFORMANCE
NT PILOT PERFORMANCE
Programming and feedback in the control of rhythmic motions stimulated by external signals
p0026 A81-15428
Psychophysiological aspects of the superslow rhythmic activity of the brain --- Russian book
p0039 A81-16594
The accuracy of motor reaction as an indicator of the functional condition of the central nervous system
p0045 A81-17084
Evaluation of the functional capabilities of humans under extreme living conditions
p0085 A81-24549
A local mechanism for differential velocity detection
p0104 A81-28248
A methodology for quantifying the effects of aging on perceptual-motor capability
p0105 A81-28675
The perception of verticality and the frame of reference of the visual tilt aftereffect
p0105 A81-28899
Velocity gradients and relative depth perception
p0105 A81-28900
Characteristics of the functional mobility of the visual analyzer
p0106 A81-29315
The adjustment of the circadian rhythms of physiological functions during athletic training at various times of the day
p0107 A81-29321
Monitoring for one kind of signal in the presence of another - The effects of signal mix on detectability
p0130 A81-32173
Influence of combined visual and vestibular cues on human perception and control of horizontal rotation
p0141 A81-33999
Personality and inter-subject differences in performance and physiological cost [illegible]ing whole-body vibration
p0157 A81-38193
A power law for perceived contrast in human vision
p0157 A81-38599
Perception, comfort and performance criteria for human beings exposed to whole body pure yaw vibration and vibration containing yaw and translational components
p0161 A81-39916
Effects of whole-body vibrations on perception and control of posture and movement
p0161 A81-40094
Visual fatigue - The need for an integrated model
p0179 A81-42133
Psychophysiological and other factors affecting human performance in accident prevention and investigation
p0203 A81-46324
Biorhythms and work --- Russian book
p0204 A81-46795
Efficiency of human visual signal discrimination
p0222 A81-48225
Cues reduce direction uncertainty and enhance motion detection
p0223 A81-49673
Study of the combined effect of antiorthostatic position and LBNP on man's tracking accuracy and spatial orientation
p0011 N81-10667
The influence of hyperbaric environment in combination with workload and confinement on human information processing
[ESA-TT-567] p0015 N81-10696

How well do probability experts assess probabilities?
[AD-A089619] p0016 N81-10701

Rapid transmeridian deployment: Cognitive performance and chronobiologic prophylaxis for circadian dyschronism
[AD-A090393] p0032 N81-12727

Laboratory investigations of biomedical factors influencing laser designator operator performance
[AD-A090425] p0033 N81-12739

Psychophysiological and other factors affecting human performance in accident prevention and investigation
[CONF-801096-1] p0061 N81-15694

Evaluation of static work capabilities in a hot environment
p0062 N81-15697

Errors in human performance
[AD-A091925] p0076 N81-16738

Technical evaluation report of the Aerospace Medical Panel Working Group WG-08 on Evaluation of Methods to Assess Workload
[AGARD-AR-139] p0076 N81-16739

Human visual performance and flat panel display image quality
[AD-A092685] p0077 N81-16743

Relationship between stress due to physical environmental factors and human reliability
[RAE-LIB-TRANS-2049] p0098 N81-19756

The role of conceptual structures in analyzing operator behavior
[RISOE-M-2217] p0101 N81-19775

Knowledge compilation: Mechanisms for the automatization of cognitive skills
[AD-A096117] p0121 N81-21767

Applications of event-related brain potentials in human engineering
[AD-A097007] p0135 N81-22698

Applications of event-related brain potentials in human engineering
[AD-A097542] p0138 N81-23795

Computer simulation of human performance in electronic processed imagery systems
[AD-A097622] p0139 N81-23801

Significance of circadian rhythms in aerospace operations
[AGARD-AG-247] p0148 N81-24715

The processing demands of higher order manual control: Application of additive factors methodology
[AD-A098077] p0150 N81-24728

Male and female strength capabilities for operating aircraft controls
[AD-A098256] p0150 N81-24730

Eye-fitting of straight lines
[AD-A096716] p0154 N81-25678

A model to measure bombardier/navigator performance during radar navigation in device 2F/14, A-6E weapon system trainer
[AD-A098776] p0155 N81-25680

Evaluation of human power capacity through olympic weightlifting analyses
p0167 N81-26694

Proposed new vision standards for the 1980's and beyond: Contrast sensitivity
p0168 N81-26708

Individual differences in dual-task performance
[AD-A099977] p0175 N81-27811

Perception of instrument data as related to flying experience
p0185 N81-28721

Impairment of performance by alcohol and diazepam
[BLL-RTS-12193] p0188 N81-28741

Remote operator performance using bandwidth-limited TV displays: A review and proposal
[AD-A100438] p0189 N81-28754

Distinctions referable to sleep, circadian rhythm of physiological functions and parameters of man's performance on the first day after changing from the usual schedule to split periods of alternate sleep and wakefulness
p0191 N81-29740

In support of the Joint Army/Navy Aircrew Impact Injury Prevention Program
[AD-A102505] p0210 N81-31819

The effects of gender and instructions on calibration
[AD-A102255] p0213 N81-31844

Human performance in continuous operations: Description of a simulation model and user's manual for evaluation of performance degradation
[AD-A101950] p0214 N81-31856

Aggregation bias in estimates of perceptual agreement
[AD-A102726] p0232 N81-32864

Analysis of man-in-the-loop control systems in the presence of nonlinearities

HUMAN REACTIONS

Time dependency of whole-body vibration discomfort
p0019 A81-13214

Mechanism of stress on human body - Psychophysiological aspects
p0021 A81-13236

Human responses to repeated high G simulated aerial combat maneuvers
p0022 A81-13501

Free fall - A partial unique motion environment
p0047 A81-17239

Direct and indirect perception of size
p0047 A81-17241

The effects of a hyperbaric medium on the human and animal organisms --- Russian book
p0084 A81-24541

The hygienic significance of the ionisation of the cabin atmosphere of a manned spacecraft
p0085 A81-24546

The immunological reactivity of an organism during habitation of hermetic chambers
p0085 A81-24550

Permissible rates of barometric pressure changes --- human tolerance in flight environment
p0103 A81-27396

Pilot reaction to attitude gyro failure - A flight experiment
p0105 A81-29143

The coordination of eye and head movements during the gaze fixation reaction
p0106 A81-29316

Personality and inter-subject differences in performance and physiological cost during whole-body vibration
p0157 A81-38193

Variation in human response to whole-body vibration
p0157 A81-38194

A comparison of community response to aircraft noise at Toronto International and Oshawa Municipal airports
p0180 A81-42303

Human ecological physiology. Part 2 - Human adaptation to various climato-geographical conditions --- Russian book
p0204 A81-46796

A comparative analysis of the biological effects of electromagnetic radiation. I - The nervous system
p0217 A81-47194

Antiorthostatic hypokinesia as a means of simulating weightlessness
[IAF PAPER 81-178] p0218 A81-47392

Effects of microwave irradiation on human blood platelets
p0220 A81-47674

Osmoregulation and interstitial fluid pressure changes in humans during water immersion
p0221 A81-48075

Variations in response to whole-body vibration - Intensity dependent effects
p0222 A81-48500

Influence of TL-light on man
[NBL-1979-4] p0060 N81-15688

Preliminary report: Biomedical considerations for future manned space flights
[NASA-CR-152383] p0092 N81-18634

Behavior as a common focus of toxicology and nutrition
[UB-3490-1026] p0121 N81-21774

Emotional Reactions of operators and slow waves of cardiac rhythm
p0191 N81-29741

HUMAN RESOURCES

Human resources, logistics, and cost factors in weapon system development project summary
[AD-A089708] p0018 N81-11639

Automation in organizations: Eternal conflict
[NASA-TM-81290] p0150 N81-24725

Human Resources, logistics and cost factors in weapon system development Demonstration in the full scale development phase of aircraft system acquisition
[AD-A096731] p0155 N81-25682

HUMAN TOLERANCES
Thirst following water deprivation in humans
p0019 A81-13199
Orthostatic responses in heat tolerant and intolerant subjects compared by three different methods
p0022 A81-13503
Effects of vibrations on the human organism
p0046 A81-17145
Variation in the general resistance of rats under the influence of repetitive hypoxic-hypercapnia
p0046 A81-17200
Microwave radiation - Biological effects and exposure standards
p0048 A81-18005
Responses to dry heat of men and women with similar aerobic capacities
p0068 A81-21472
Effectiveness and wearability of immersion hypothermia protection equipment
p0070 A81-22086
Permissible rates of barometric pressure changes --- human tolerance in flight environment
p0103 A81-27396
Comparative analysis of human tolerance to prolonged loading at various gravitational gradients
p0106 A81-29319
Hypoventilatory training as a means of increasing reserve time in pure-nitrogen breathing
p0123 A81-30742
Elevation of the tolerance of the organism to high environmental temperatures /Review of the literature/
p0124 A81-30788
Human adaptation to simulated gravitational fields
p0163 A81-40372
The relative characteristics of continuous and intermittent adaptation to high temperatures
p0200 A81-44891
Human adaptation mechanisms under high-latitude conditions --- Russian book
p0204 A81-46791
Active muscle force and moment response of the human arm and shoulder
p0205 A81-47103
Quantification through the surface EMG of muscle fatigue and recovery during successive isometric contractions
p0205 A81-47107
Oxygen provision to humans under conditions of high-altitude flight
p0217 A81-47150
Altitude acclimatization. Citations from the International Aerospace Abstracts data base
[NASA-CR-163672] p0015 N81-10697
XDC-2 digital decompression computer: Assessment of decompression profiles by ultrasonic monitoring, phase 1, 36-54 MSW
[AD-A090467] p0032 N81-12729
SPH-4 helmet damage and head injury correlation
[AD-A090750] p0033 N81-12740
Physiological and hematological responses to summer and winter dry-heat acclimation
[AD-A093194] p0077 N81-17695
Thermal comfort in an era of energy shortage
[AD-A093193] p0078 N81-17696
Biological effects of short, high-level exposure to gases; Carbon Monoxide
[AD-A094503] p0098 N81-19759
A viscoelastic finite element model of the human intervertebral joint
[AD-A094774] p0099 N81-19764
Human engineering evaluation of the hyperbaric research facility
[AD-A103681] p0238 N81-33806

HUMAN WASTES
NT FECES
NT SWEAT
NT URINE
Sources of microimpurity contamination of cabin atmospheres and their toxicological evaluation --- in spacecraft
p0084 A81-24544
Recovery of synthetic organic acids from human waste in closed life support systems
p0193 N81-29752

HYDRAULIC ACTUATORS
U ACTUATORS

HYDRAZINE NITRATE
Metabolism of hydrazine
[AD-A101849] p0210 N81-31818

HYDRAZINES
NT DIMETHYLHYDRAZINES
Development of occupational and environmental health criteria for the F-16
p0089 A81-26768
Industrial hygiene and the F-16 air combat fighter
p0089 A81-26769
Differential effects of hydrazine compounds on B- and T-cell immune function
p0172 N81-27794
Hydrazine effects on vertebrate cells in vitro
p0172 N81-27795
The oncogenic hazard from chronic inhalation of hydrazine
p0173 N81-27796
Inhibition of virus transformation by high energy fuels as a correlate of carinogenic potential
p0173 N81-27797

HYDROCARBON FUELS
NT DIESEL FUELS
NT JET ENGINE FUELS
NT JP-5 JET FUEL

HYDROCARBON POISONING
Intertissue variation in benzo(a)pyrene metabolism by human skin, lung and liver in vitro
p0173 N81-27798

HYDROCARBONS
NT ACETYLENE
NT ETHANE
NT METHANE
NT PROPYLENE
NT PYRENES
Amino acids and hydrocarbons approximately 3,800-Myr old in the Isua rocks, southwestern Greenland
p0048 A81-18050
The carbon isotope biogeochemistry of the individual hydrocarbons in bat guano and the ecology of the insectivorous bats in the region of Carlsbad, New Mexico
p0199 A81-44066
Molecular biology of environmental aromatic hydrocarbons
[DOE/EV-10328/1] p0017 N81-11628

HYDROELASTICITY
Hydroelastic effects in the aorta bifurcation zone
[NASA-TM-75432] p0074 N81-16728

HYDROGEN
Response of selected microorganisms to experimental planetary environments
[NASA-CR-164064] p0115 N81-20733

HYDROGEN COMPOUNDS
NT HYDROGEN PEROXIDE
NT HYDROGEN SULFIDE

HYDROGEN PEROXIDE
A search for a nonbiological explanation of the Viking Labeled Release life detection experiment
p0157 A81-37959

HYDROGEN PRODUCTION
Triple redundant hydrogen sensor with in situ calibration
[NASA-CR-160862] p0062 N81-15701

HYDROGEN SULFIDE
Response of selected microorganisms to experimental planetary environments
[NASA-CR-164064] p0115 N81-20733

HYDROXYCORTICOSTEROID
NT CORTISONE
Effect of some factors that simulate space flights on blood plasma levels of free and protein-bound 11-hydroxycorticosteroids
p0012 N81-10672

HYDROXYL COMPOUNDS
NT ALCOHOLS
NT ETHYL ALCOHOL
NT GLYCOLS
Potential health and safety impacts from distribution storage alcohol fuels
[ANL/CNSV/TM-61] p0207 N81-30789

HYGIENE
NT ORAL HYGIENE

Sanitary, hygienic and physiological aspects of manned spacecraft --- Russian book
p0084 A81-24543
The hygiene and toxicology of nonmetallic materials
p0084 A81-24545
The hygienic significance of the ionization of the cabin atmosphere of a manned spacecraft
p0085 A81-24546
Development of occupational and environmental health criteria for the F-16
p0089 A81-26768
Industrial hygiene and the F-16 air combat fighter
p0089 A81-26769
Occupational hypokinesia as a hygienic problem
[NASA-TM-76323] p0058 N81-15674
Current status and prospects of hygienic support of manned space flights
p0186 N81-28727
Urine collection apparatus --- feminine hygiene
[NASA-CASE-MSC-18381-1] p0188 N81-28740

HYGROMETERS
Use of an electrical resistance hygrometer to measure human sweat rates
[NASA-TM-81223] p0077 N81-17692

HYGROSCOPICITY
Calculations of heat and vapour transport in clothing: Transient effects in hygroscopic materials
[AD-A098004] p0150 N81-24729
Aerosol factors affecting respiratory deposition
[DE81-024425] p0238 N81-33809

HYOSCINE
Experimental motion sickness - Efficacy of transdermal scopolamine plus ephedrine
p0145 A81-37286
Use of nospanum in combination with certain vitamins against seasickness
p0194 N81-29760

HYPERBARIC CHAMBERS
The effects of a hyperbaric medium on the human and animal organisms --- Russian book
p0084 A81-24541
Hyperbaric oxygenation. Citations from the NTIS data base
[PB80-813769] p0033 N81-12735
Compatibility test of oxygen exposure in the range 2.2 to 2.8 bar abs --- in a hyperbaric chamber
[ESA-TT-566] p0136 N81-22705
Human engineering evaluation of the hyperbaric research facility
[AD-A103681] p0238 N81-33806

HYPERCAPNIA
Variation in the general resistance of rats under the influence of repetitive hypoxic-hypercapnia
p0046 A81-17200
Experimental studies on the survival capacity in the sealed environment. I - Effect of cooping up in the individual sealed chamber of various volume on survival time in rats of various body weight
p0069 A81-21988
The effect of elevated carbon dioxide partial pressure on oxygen consumption and glycolysis in the tissues of albino rats
p0086 A81-24931
The reaction of rat testes to the repeated combined action of hypercapnia, hypoxia and cooling
p0129 A81-32152
Method for evaluating respiratory system reaction to increasing hypercapnia
p0236 N81-33795
Method for evaluating respiratory system reaction to increasing hypercapnia
p0237 N81-33801

HYPERKINESIA
Efficiency of the rat heart and muscular system following physical training and hypokinesia
p0044 A81-17050

HYPEROXIA
The effects of hyperbaric oxygen /HBO/ on the qualitative and quantitative brain fatty acid compositions of normal and vitamin E-deficient mice
p0043 A81-16693
Increase in the turn-over rate of cerebral dopamine, noradrenaline and serotonin under hyperbaric oxygen
p0043 A81-16694
The influence of an elevation of the partial pressure of oxygen on the regulatory function of the blood-brain barrier
p0046 A81-17198
Changes in rat erythrocyte 2,3-DPG concentration under various experimental influences
p0082 A81-23399
Lack of hyperbaric O2 effect on blood-brain barrier permeability in conscious rats
p0090 A81-26773
Early pulmotoxic effects of oxygen on the rat alveolar type II epithelial cell
p0142 A81-34304
Reduced norepinephrine response to dynamic exercise in human subjects during O2 breathing
p0170 A81-41790
Hyperbaric oxygenation. Citations from the NTIS data base
[PB80-813769] p0033 N81-12735
The toxic effect of insignificant oxygen excess in an artificial gas atmosphere
p0185 N81-28715
Morphological and functional evaluation of the external respiratory system of rabbits with subacute oxygen toxicity
p0192 N81-29744

HYPERPNEA
Effect of CO2 set point on ventilatory response to exercise
p0170 A81-41791

HYPERTENSIN
NT POLYPEPTIDES

HYPERTENSION
Hypertension and orthostatic hypotension in applicants for spaceflight training and spacecrew - Medical investigation, clinical assessment, and evaluation for spaceflight duties
[IAF PAPER 80-C-124] p0049 A81-18291
Identifying borderline hypertensives - Comparative value of various blood pressure measurements
p0150 A81-38847
Vasomotion patterns in skeletal muscle in normal and hypertensive rats
p0091 N81-18625
Use of betablockade in the treatment of aircrew with hypertension
p0169 N81-26715
Considerations on long term therapy of hypertonia, lipometabolic disorders and stress in flying personnel
p0169 N81-26717
Endurance of lower body negative pressure by pilots with neurocirculatory dystonia of the hypertensive type
p0193 N81-29756
Cardiovascular problems during the pilots career
p0212 N81-31837

HYPERTHERMIA
Physiological responses of men and women to prolonged dry heat exposure
p0005 A81-12231
Effect of low-potassium diet on rat exercise hyperthermia and heatstroke mortality
p0177 A81-41785
Maximum oxygen uptake as a criterion of human resistance to hypoxia, pyoerthermia and hypothermia
p0183 N81-28700

HYPERTONIA
U OSMOSIS

HYPERTROPHY
U GROWTH

HYPOBARIC ATMOSPHERES
Experimental study of the functional, aminergic and cerebrovascular effects of hypobaric hypoxia
p0008 A81-12760
Hypobaric hypoxia - Central catecholamine levels and cortical PO2 and avoidance response in rats treated with apomorphine
p0090 A81-26774

HYPODYNAMIA
On the modification of orthostatic tolerance by athletic training and its relation with the physical fitness
[IAF PAPER 80-C-117] p0048 A81-18288
Effect of excessive saccharose administration on metabolic processes in the liver of rabbits with restricted mobility
[NASA-TM-76331] p0056 N81-15659

Occupational hypokinesia as a hygienic problem
[NASA-TM-76323] p0050 N81-15674
Hemorheological changes, the state of
microcirculation, and blood acid-base balance in
rats under conditions of a 30-day limiting of
the motor activity
[NASA-TM-76464] p0073 N81-16719
Ways of increasing muscular activity by means of
isometric muscular exertion
[NASA-TM-76307] p0073 N81-16723
Pharmacological activity and toxicity of some
neurotropic agents under conditions of
experimental hypodynamia
[NASA-TM-76371] p0074 N81-16724
Effect of inaction on function of fast and slow
muscle spindles
[NASA-TM-76374] p0113 N81-20720
The enzyme spectrum of the small intestine with
hypodynamia under conditions of high temperature
[NASA-TM-76150] p0114 N81-20727

HYPOGLYCEMIA
Fasting or feeding - A survey of fast-jet aircrew
nutrition in the Royal Air Force Strike Command,
1979
p0006 A81-12236

HYPOKINESIA
Regional hemodynamic shifts and the condition of
vasomotor regulation during 182 days of
antiorthostatic hypokinesia
p0001 A81-10123
Model for antiorthostatic hypokinesia - Head-down
tilt effects on water and salt excretion
p0002 A81-10619
Comparative evaluation of the changes in the human
organism during antiorthostatic hypokinesia and
immersion
p0044 A81-17077
The functional condition of the adrenal cortex and
kidneys of a healthy man during prolonged
antiorthostatic hypokinesia
p0201 A81-44896
The regulation of calcium exchange under
conditions of prolonged antiorthostatic
hypokinesia
p0201 A81-44897
Antiorthostatic hypokinesia as a means of
simulating weightlessness
[IAF PAPER 81-178] p0210 A81-47392
Erythrocyte balance during 182-day hypokinesia
p0012 N81-10674
Effect of prolonged antiorthostatic position on
cardiac bioelectrical activity according to EKG
tracings from corrected orthogonal leads
p0012 N81-10675
Vestibular nystagmus in rats after hypokinesia and
prolonged rotation
p0012 N81-10676
Effect of exercise, vitamin and mineral
supplements on reproductive function of albino
rats during prolonged hypokinesia
p0013 N81-10677
Method for producing clinostatic hypokinesia in
monkeys
p0013 N81-10683
Ultrastructural studies of the mitochondriae in
the striated muscles of birds with regard to
experimental hypokinesia
[NASA-TM-76283] p0034 N81-13616
Cyclic AMP system in muscle tissue during
prolonged hypokinesia
[NASA-TM-76186] p0035 N81-13627
Effect of excessive saccharose administration on
metabolic processes in the liver of rabbits with
restricted mobility
[NASA-TM-76331] p0056 N81-15659
Water metabolism regulating mechanisms in
hypokinesia
[NASA-TM-76309] p0058 N81-15671
Electrostimulation of muscles as a method for the
treatment and prophylaxis of hemodynamic
disturbances during prolonged hypokinesia
[NASA-TM-76318] p0058 N81-15672
Local redistribution of blood under the effect of
fixation stress against a background of
hypokinesia
[NASA-TM-76322] p0058 N81-15673
Occupational hypokinesia as a hygienic problem
[NASA-TM-76323] p0058 N81-15674
Effect of long-term hypokinesia on the
electrolytic composition of the blood in
patients with osteoarticular tuberculosis
[NASA-TM-76325] p0059 N81-15680
Change in energy expenditure and brain and adrenal
content of catecholamines in rats during
muscular loading and hypokinesia
[NASA-TM-76148] p0109 N81-20697
Effect of six-month hypokinesia in dogs on mineral
component, reconstruction and mechanical
properties of bone tissue
[NASA-TM-76160] p0110 N81-20698
Functional-morphological parallels of the
hypothalamo-pituitary-adrenal system response
reaction to long-term hypokinesia
[NASA-TM-76001] p0112 N81-20716
The functional status of the human vestibular
analyzor following 56 days in an aqueous
immersion medium
[NASA-TM-75088] p0114 N81-20725
Study of mass-inertia characteristics of human
body segments during 6-month hypokinesia by the
gamma scanning method
p0117 N81-21743
Chemical composition of mineral component of human
vertebrae and calcaneus after hypokinesia
p0117 N81-21744
Efficacy of alimentary factors in the recovery
period following long-term antiorthostatic
hypokinesia
p0118 N81-21747
Regional analgesia by conduction anesthesia and
reflex therapy in the acute recovery period
following antiorthostatic hypokinesia
p0118 N81-21749
Chemical composition of mineral component of
rabbit bones as related to 30-day hypokinesia
p0119 N81-21757
The effect of short-term antiorthostatic
hypokinesia on central and intracardiac
hemodynamics and metabolism of a healthy person
[NASA-TM-76525] p0134 N81-22609
A 14-day ground-based hypokinesia study in
nonhuman primates: A compilation of results
[NASA-TM-81268] p0149 N81-24721
The nature of compensatory and restorative
processes in the livers of animals irradiated
during hypokinesia
[NASA-TM-76513] p0170 N81-27779
The negative effect of hypokinesia involving
injury and preventive measures
[NASA-TM-76562] p0171 N81-27787
Investigation of actual nutrition and food status
under conditions of limited mobility (hypokinesia)
[NASA-TM-76563] p0174 N81-27807
Motor activity of man when it is artificially
restricted
p0184 N81-28706
Morphological changes in different types of rat
muscle fibers during long-term hypokinesia
p0184 N81-28707
Corticosteroid content of rat adrenals in the
presence of hypokinesia combined with graded
physical exercise
p0184 N81-28708
Optimum atmosphere in pressurized cabins and
future use thereof
p0186 N81-28728
Structural changes in the soleus muscle of rats
flown aboard the cosmos series of biosatellites
and submitted to hypokinesia
p0192 N81-29745
Dehydrogenase activity in the pentose phosphate
oxidative pathway and relation thereof to lipid
metabolism under hypokinetic conditions
p0192 N81-29748
Effect of hypokinesia in head down position on
man's equilibrium function
p0234 N81-33779
Changes in rabbit immunoreactivity as related to
duration of hypokinesia
p0237 N81-33803

HYPOMETABOLISM
Thyroid function at high altitude in the monkey,
Macaca nemestrina
p0056 N81-15657

HYPOTENSION
Hypertension and orthostatic hypotension in
applicants for spaceflight training and

spacecrew - Medical investigation, clinical assessment, and evaluation for spaceflight duties
[IAF PAPER 80-C-124] p0049 A81-18291
Exercise training hypotension - Implications for plasma volume, renin, and vasopressin
p0201 A81-45176
Orthostatic hypotension
[NASA-TM-75433] p0076 N81-15729
Idiopathic orthostatic hypotension: Recent data (eleven cases) and review of the literature
[NASA-TM-75890] p0098 N81-19750
Orthostatic hypotension
[NASA-TM-75869] p0114 N81-20728
Effect of persistent regional vascular hypotension on growth of malignant tumors
p0193 N81-29754

HYPOTHALAMUS
The effect of pharmacological destruction of hypothalamic monoaminergic structures on body temperature and gaseous exchange at acute cooling of the organism
p0005 A81-11776
Thermal effects of injecting norepinephrine into hypothalamus of the rat during rest and exercise
p0042 A81-16678
Effects of repeated heat exposure on hypothalamic sensitivity to norepinephrine
p0042 A81-16679
A hypothalamic model of adaptation and deadaptation under altitude hypoxia and the controllable effect on the reactivity and resistance of the organism
p0085 A81-24929
Functional-morphological parallels of the hypothalamo-pituitary-adrenal system response reaction to long-term hypokinesia
[NASA-TM-76001] p0112 N81-20716
Reaction by the rat hypothalamus-hypophyseal system to stress from immobilization
[NASA-TM-76514] p0170 N81-27780

HYPOTHERMIA
Effects of gravitational profiles on the rat's thermoregulatory response to cold
p0002 A81-10621
Effectiveness and wearability of immersion hypothermia protection equipment
p0070 A81-22086
Metabolic responses of resting man immersed in 25.5 C and 33 C water
p0081 A81-23391
Maximum oxygen uptake as a criterion of human resistance to hypoxia, hyperthermia and hypothermia
p0183 N81-28700
Comparison between the heat loss and heat gain through the lungs and body surface during hypothermia and its treatment
[DRIC-T-6307] p0211 N81-31825

HYPOVENTILATION
Hypoventilatory training as a means of increasing reserve time in pure-nitrogen breathing
p0123 A81-30742

HYPOXIA
Influence of CO2 on cardiovascular response to hypoxia in conscious dogs
p0003 A81-10774
Experimental study of the functional, aminergic and cerebrovascular effects of hypobaric hypoxia
p0008 A81-12760
Vectorcardiographic changes in hypoxic environment
p0020 A81-13226
Vasodilator and constrictor responses to hypoxia in isolated pig lungs
p0024 A81-13921
Stability of alveolar hypoxic vasoconstriction with intermittent hypoxia
p0024 A81-13922
Platelet count in temporary residents of high altitude
p0042 A81-16681
Mechanisms of cardiovascular system adaptation to hypoxia /Review/
p0046 A81-17197
Variation in the general resistance of rats under the influence of repetitive hypoxic-hypercapnia
p0046 A81-17200
Electrocardiogram made on ascending the Mount Qomolangma from 50 m a. s. l.
p0047 A81-17739
Speculations on the pathogenesis of high-altitude pulmonary edema
p0063 A81-19712
Dynamics of the state of redox systems in structural elements of the cerebral cortex during oxygen deficiency /cytophotometric study in vivo/
p0065 A81-19900
Diffusing capacity of the lung during hypoxia - Role of capillary recruitment
p0068 A81-21474
Experimental studies on the survival capacity in the sealed environment. I - Effect of cooping up in the individual sealed chamber of various volume on survival time in rats of various body weight
p0069 A81-21988
Dopaminergic agonists and conditioned avoidance response in normoxic or hypoxic rats
p0071 A81-22100
Pilot's aeromedical guide --- Book
p0081 A81-23370
Changes in rat erythrocyte 2,3-DPG concentration under various experimental influences
p0082 A81-23399
The resistance of rats to acute hypoxia during anemia
p0082 A81-23400
A hypothalamic model of adaptation and deadaptation under altitude hypoxia and the controllable effect on the reactivity and resistance of the organism
p0085 A81-24929
Hypobaric hypoxia - Central catecholamine levels and cortical PO2 and avoidance response in rats treated with apomorphine
p0090 A81-26774
The role of thyroid hormones in thermoregulatory reactions during altitude adaptation
p0103 A81-27574
Helic processes in the rat circulatory system during long-term adaptation to hypoxia
p0104 A81-27575
Types of cardiorespiratory responses produced during acute hypoxia
p0123 A81-30741
The reaction of rat testes to the repeated combined action of hypercapnia, hypoxia and cooling
p0129 A81-32152
Avoidance learning and mechanism of the protective effect of apomorphine against hypoxia
p0142 A81-34305
Hypoxia effects on plasma volume shifts at rest, work, and recovery in supine posture
p0178 A81-41789
Effects of sustained exposure to hypoxic environment on avoidance behaviour in rats
p0179 A81-41814
Physiological mechanisms for the adaptation of the respiratory regulation system to acute high-altitude hypoxia
p0200 A81-44890
Effect of X-rays on the bone marrow cells of white mice under conditions of hypoxia
p0204 A81-46825
Norepinephrine turnover in lung - Effect of cold pressure and chronic hypoxia
p0221 A81-48074
Study of apexphonocardiogram and carotid pulsation during short term hypoxia in a decompression chamber
p0225 A81-49955
Altitude acclimatization. Citations from the International Aerospace Abstracts data base
[NASA-CR-163672] p0015 N81-10697
Thyroid function at high altitude in the monkey, Macacanemestrina
p0056 N81-15657
Neuroendocrine strategies for adaptation to high altitude
p0073 N81-16717
Comparison of early reactions of the blood system in rats to immobilization, the action of hypoxia and the administration of erythopoietin
[NASA-TM-76169] p0110 N81-20699
Hypoxia in the walls of large blood vessels
p0111 N81-20706

Total and regional distribution of coronary blood
flow during hypoxia
p0133 N81-22681
Dietary protection against pulmonary oxygen
poisoning
[AD-A097750] p0150 N81-24727
The control of brain blood flow during various
blood oxygen levels
p0167 N81-26695
USSR Report: Space Biology and Aerospace
Medicine, vol. 14, no. 6
[JPRS-77311] p0183 N81-28699
Maximum oxygen uptake as a criterion of human
resistance to hypoxia, hyperthermia and
hypothermia
p0183 N81-28700
External respiration in the presence of hyperbaric
oxygenation
p0184 N81-28713
Dynamic structure of cardiac rhythm during
adaptation to altitude hypoxia
p0191 N81-29742
Effect of sex hormones on some parameters of
carbohydrate metabolism in the lungs of hypoxic
rats
p0235 N81-33785
Effect of hypoxia on affinity of hemoglobin for
oxygen in animals
p0237 N81-33802
HYSTERESIS
Pressure-flow hysteresis in the pulmonary
vasculature
p0073 N81-16721

IMMOBILIZATION
Protein synthesis rates in atrophied gastrocnemius
muscles after limb immobilization
p0178 A81-41788
Method for producing clinostatic hypokinesia in
monkeys
p0013 N81-10683
The effect of immobilization and 3
(beta-aminoethyl)-1, 2, 4 triazol on the calcium
content in gastric tissues of guinea pigs during
the formation of experimental ulcers
[NASA-TM-75992] p0109 N81-20691
Changes in mast cells and in permeability of
mesenteric microvessels under the effect of
immobilization and electrostimulation
[NASA-TM-75988] p0109 N81-20694
Morphological changes in neurons of the hind limb
reflex arc during long term immobilization
[NASA-TM-75939] p0109 N81-20695
Experimental joint immobilization in guinea pigs.
Effects on the knee joint

[NASA-TM-76067] p0109 N81-20696
Comparison of early reactions of the blood system in rats to immobilization, the action of hypoxia and the administration of erythropoietin [NASA-TM-76169] p0110 N81-20699
Activity of the right cardiac ventricle and metabolism in healthy persons during an orthostatic test after short term immobilization [NASA-TM-76519] p0114 N81-20726
The effect of short-term antiorthostatic hypokinesia on central and intracardiac hemodynamics and metabolism of a healthy person [NASA-TM-76525] p0134 N81-22689
Spine immobilization apparatus [NASA-CASE-ARC-11167-1] p0152 N81-25662
Reaction by the rat hypothalamus-hypophyseal system to stress from immobilization [NASA-TM-76514] p0170 N81-27780
Morphological changes in different types of rat muscle fibers during long-term hypokinesia p0184 N81-28707

IMMUNITY
Effects of space flights on lymphocyte blast transformation in cosmonauts' peripheral blood p0117 N81-21741
Seasonal changes in leukocyte count and phagocytic activity of leukocytes in individuals working in a closed environment p0185 N81-28720
Changes in rabbit immunoreactivity as related to duration of hypokinesia p0237 N81-33803

IMMUNOASSAY
Urinary metallothionein as a biological indicator of occupational cadmium exposure [BNL-29064] p0188 N81-28746

IMMUNOLOGY
Subunit specificity of the two acetyl-CoA synthetases of yeast as revealed by an immunological approach p0027 A81-15483
The immunological reactivity of an organism during habitation of hermetic chambers p0085 A81-24550
Electrophoretic cell separation by means of immunomicrospheres p0180 A81-42175
Studies on the effects of radiation on human lymphocytes p0036 N81-13634
Antibodies to myofibril antigens in cosmonauts after spaceflights [NASA-TM-76300] p0073 N81-16722
Differential effects of hydrazine compounds on B- and T-cell immune function p0172 N81-27794
Application of mathematical modeling to analysis of immunological phenomena p0191 N81-29737

IMPACT ACCELERATION
Computer velocity control of a sled used in impact studies p0130 A81-32850
Computational aspects of incorporating auxiliary information into an impact acceleration injury prediction model [AD-A095299] p0115 N81-20730

Remote Medical Diagnosis System (RMDS): Evaluation of the AN/FTA-28 telephone terminal interface
[AD-A094831] p0099 N81-19762
MEETINGS
U CONFERENCES
MEMBRANES
Applicability of silicone membrane as a lung for a fish incubator in space life science research
[IAF PAPER 80-C-132] p0050 A81-18296
Metabolism of fatty acids in rat brain in microsomal membranes
[UCLA-12/1289] p0147 N81-24710
Direct observation of electron transfer across a lipid bilayer: Laser photolysis of an asymmetric vesicle system containing chlorophyll, methyl viologen, and EDTA
[DOE/ER-04927/T1] p0151 N81-25657
Ultrastructure of the rat's small intestinal mucosa after flight aboard the Cosmos-936 biosatellite
p0192 N81-29746
MEMORY
Changes in human memory during adaptation to climatogeographic conditions following transmeridional flight
p0044 A81-17076
Phase shifting circadian rhythms produces retrograde amnesia
p0084 A81-24250
Human memorizing of emotionally significant and neutral information during adaptation to different climato-geographic conditions
p0107 A81-29322
Performance models for spatial and locational cognition
[AD-A094149] p0095 N81-18654
Knowledge compilation: Mechanisms for the automatization of cognitive skills
[AD-A096117] p0121 N81-21767
Preliminary study of head-up assessment techniques. 1: Viewing duration of instrument panel and HUD symbology using a recall methodology
[NASA-TM-78517] p0138 N81-23798
The processing demands of higher order manual control: Application of additive factors methodology
[AD-A098077] p0150 N81-24728
Microwave effects of learning and memory in mice
[AD-A094788] p0151 N81-25656
Individual differences in dual-task performance
[AD-A099977] p0175 N81-27811
Comprehension and analysis of information in text. 4: Decision and verification processes
[AD-A102677] p0232 N81-32863
MENTAL HEALTH
Geomagnetic-biological correlations - Some new results
p0084 A81-24154
Psychiatric disability of Air Force fliers
p0126 A81-31546
MENTAL PERFORMANCE
Changes in human memory during adaptation to climatogeographic conditions following transmeridional flight
p0044 A81-17076
Sleep and mental work capacity
p0045 A81-17085
The visual accommodation response during concurrent mental activity
p0051 A81-19572
Mental workload in decision and control
p0065 A81-20499
Human memorizing of emotionally significant and neutral information during adaptation to different climato-geographic conditions
p0107 A81-29322
How well do probability experts assess probabilities?
[AD-A089619] p0016 N81-10701

On the estimation of mental workload
[AD-A094783] p0100 N81-19767
Processes of informal reasoning and relationships between informal and formal reasoning in problem solving
[AD-A095138] p0100 N81-19770
On the structure of knowledge. A morphology of mental models in a man-machine system context
[RISOE-M-2192] p0101 N81-19774
The effects of increased ambient temperature on dual task performance
p0135 N81-22695
Applications of event-related brain potentials in human engineering
[AD-A097007] p0135 N81-22698
Uncertainty measurement in a complex task as a function of response mode and event type characteristics
[AD-A097678] p0137 N81-23792
Significance of circadian rhythms in aerospace operations
[AGARD-AG-247] p0148 N81-24715
MENTAL STRESS
U STRESS (PSYCHOLOGY)
MEPROBAMATE
Effect of meprobamate on the vestibulosensory and vestibular somatic reaction
[NASA-TM-76104] p0133 N81-22683

MONKEYS
Thyroid function at high altitude in the monkey, Macacanemestrina
p0056 N81-15657
Spacelab flight simulated by two monkeys at CERMA
[NASA-TM-76390] p0115 N81-21729

MONOCULAR VISION
Angular selectivity of monocular rivalry - Experiment and computer simulation
p0025 A81-14745

MONOPLANES
NT B-52 AIRCRAFT
NT MIRAGE AIRCRAFT

MONTE CARLO METHOD
A Monte Carlo study: Robustness of analysis of covariance to violation of selected assumptions
p0151 N81-24733

MONTMORILLONITE
Adsorption of amino acid enantiomers by Na-montmorillonite
p0129 A81-32066

MORALE
Preliminary report on small group factors in long duration space flights: Review and directions for future research
[NASA-CR-152385] p0094 N81-18650
Preliminary report on social psychological factors in long duration space flights: Review and directions for future research
[NASA-CR-152382] p0095 N81-18653
Automation in organizations: Eternal conflict
[NASA-TM-81290] p0150 N81-24725

MORPHINE
Hypobaric hypoxia - Central catecholamine levels and cortical PO2 and avoidance response in rats treated with apomorphine
p0090 A81-26774
Naloxone inhibits and morphine potentiates. The adrenal steroidogenic response to ACTH
[NASA-TM-81253] p0053 N81-14606
Stress antagonizes morphine-induced analgesia in rats
[NASA-TM-81282] p0116 N81-21732

MORPHOLOGY
NT LUNG MORPHOLOGY
Morphological changes in neurons of the hind limb reflex arc during long term immobilization
[NASA-TM-75939] p0109 N81-20695
Functional-morphological parallels of the hypothalamo-pituitary-adrenal system response reaction to long-term hypokinesia
[NASA-TM-76001] p0112 N81-20716
Morphological effects of weightlessness and pathogenesis thereof
p0187 N81-28732
Structural changes in the soleus muscle of rats flown aboard the cosmos series of biosatellites and submitted to hypokinesia
p0192 N81-29745
Ultrastructure of the rat's small intestinal mucosa after flight aboard the Cosmos-936 biosatellite
p0192 N81-29746
Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight
p0228 N81-32838

MORTALITY
Experimental studies on the survival capacity in the sealed environment. I - Effect of cooping up in the individual sealed chamber of various volume on survival time in rats of various body weight
p0069 A81-21908
Effect of low-potassium diet on rat exercise hyperthermia and heatstroke mortality
p0177 A81-41785
Comparison of survival times under rising and fixed temperature conditions
p0200 A81-44856
Postmortem coronary atherosclerosis finding in general aviation accident pilot fatalities: 1975 - 1977
[AD-A089428] p0015 N81-10693
Study of mouse mortality after exposure to helium ions with administration of tilorone
p0185 N81-28719

MOSFET
U FIELD EFFECT TRANSISTORS

MOSS (SPACE STATIONS)
U ORBITAL SPACE STATIONS

MOTILITY
U LOCOMOTION

MOTION AFTEREFFECTS
Velocity after-effects - The effects of adaptation to moving stimuli on the perception of subsequently seen moving stimuli
p0088 A81-25891
Interocular transfer of the motion after-effect is not reduced by binocular rivalry
p0157 A81-38600

MOTION EQUATIONS
U EQUATIONS OF MOTION

MOTION PERCEPTION
Motion and vision. III - Stabilized pattern adaptation
p0029 A81-15788
Visual responses to changing size and to sideways motion for different directions of motion in depth - Linearization of visual responses
p0030 A81-15789
Visual orientation by motion-produced blur patterns - Detection of divergence
p0047 A81-17240
Displacement detection in human vision
p0072 A81-23098
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements
p0072 A81-23099
Visual illusions arising during the perception of moving images
p0103 A81-27573
A local mechanism for differential velocity detection
p0104 A81-28248
Eye torsion and the apparent horizon under head tilt and visual field rotation
p0104 A81-28249
Velocity gradients and relative depth perception
p0105 A81-28900
Influence of combined visual and vestibular cues on human perception and control of horizontal

rotation
p0141 A81-33999
Sensation of rotation about a vertical axis with a fixed visual field in different illuminations and in the dark
p0141 A81-34000
A critique of the gravity vector alignment method for motion simulation
[AIAA 81-0985] p0143 A81-36571
Effects of whole-body vibrations on perception and control of posture and movement
p0161 A81-40094
The effects on visual discrimination of image movement across the stationary retina
p0181 A81-43372
Exterospecific component of the motion parallax field
p0199 A81-44270
Motion sensitivity measured by a psychophysical linearizing technique
p0199 A81-44271
Perceived direction of motion under retinal image stabilization
p0203 A81-46199
Moving and the motion after-effect
p0219 A81-47665
A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task
p0221 A81-48006
Cues reduce direction uncertainty and enhance motion detection
p0223 A81-49673
Image analysis of human motion
p0062 N81-15698
Enhancing sensitivity to visual motion
[AD-A094793] p0155 N81-25679
Inferring shape from motion fields
[AD-A099150] p0167 N81-26698
Thresholds for the visual perception of position deviations and motion
[NLR-TR-79025-U] p0172 N81-27790

MOTION SICKNESS
Free fall - A partial unique motion environment
p0047 A81-17239
Biofeedback rehabilitation of airsick aircrew
p0082 A81-23397
The role of the vegetative nervous system in the regulation of glucose absorption in the intestine during motion sickness
p0086 A81-24932
Motion sickness caused by rotations about earth-horizontal and earth-vertical axes
p0088 A81-26444
Variations in gravitoinertial force level affect the gain of the vestibulo-ocular reflex - Implications of the etiology of space motion sickness
p0089 A81-26771
Experimental motion sickness - Efficacy of transdermal scopolamine plus ephedrine
p0145 A81-37286
Motion sickness and sensory illusions - Effects of rotations around horizontal axis
p0159 A81-39676
Orthostatic disorder. A contributing factor to motion sickness?
p0079 N81-17706
Pharmacological agents for the prevention and treatment of motion sickness
p0116 N81-21736
Study of human vestibular reactions to simulated periodic ship rolling
p0118 N81-21751
Preliminary analysis of motion sickness incidence data
[AD-A096750] p0134 N81-22691
Habituation to novel visual vestibular environments with special reference to space flight
[NASA-CR-164437] p0152 N81-25665
Biofeedback rehabilitation of airsick aircrew
p0160 N81-26709
Vestibular selection criteria development --- assessing susceptability to motion sickness during orbital space flight
[NASA-CR-161044] p0189 N81-28748
Quantitative evaluation of clinical manifestations of motion sickness
p0193 N81-29757

MOTION SICKNESS DRUGS
Relative efficacy of the proposed Space Shuttle antimotion sickness medications
[IAF PAPER 81-177] p0218 A81-47391
Pharmacological agents for the prevention and treatment of motion sickness
p0116 N81-21736
Use of nospasma in combination with certain vitamins against seasickness
p0194 N81-29760

MOTION SIMULATORS
Simulator cockpit motion and the transfer of flight training
p0029 A81-15694
Motion simulation of an articulated robotic arm subjected to static forces
[ASME PAPER 80-DET-102] p0050 A81-18653
The workspaces of a mechanical manipulator
[ASME PAPER 80-DET-107] p0050 A81-18655
The basic motion regulation system for a quadruped walking vehicle
[ASME PAPER 80-DET-34] p0050 A81-18656
Task segmentation - An approach to simulator task fidelity
p0068 A81-21728
A critique of the gravity vector alignment method for motion simulation
[AIAA 81-0985] p0143 A81-36571
A study of the comparative effects of various means of motion cueing during a simulated compensatory tracking task
p0221 A81-48006
A motion cycle simulator for analysis and optimization of human power
p0138 N81-23797
Helmet weight simulator
[NASA-CASE-LAR-12320-1] p0174 N81-27806

MOTION STABILITY
Model problem of biped walking with vertical uncomfortableness
p0177 A81-41361
A quantitative analysis of preliminary postural components of complex voluntary motion
p0177 A81-41780

MOTOR SYSTEMS (BIOLOGY)
U EFFERENT NERVOUS SYSTEMS

MOTOR VEHICLES
Simulation analysis of head/neck impact response for helmeted and unhelmeted motorcyclists
[PB81-145377] p0139 N81-23804

MOUNTAIN INHABITANTS
Autonomic responses of high-altitude natives during sojourn at plains and on return to altitude
p0145 A81-37288

MOUNTS
U SUPPORTS

MUCOUS
Experiment K-315: Studies of the nasal mucosa
p0229 N81-32843

MULTILAYER INSULATION
Thermal comfort characteristics of textile apparel fabrics
p0135 N81-22699

MULTIPLEX TRANSMISSION
U MULTIPLEXING

MULTIPLEXERS
U MULTIPLEXING

MULTIPLEXING
Signal-processing techniques and transducer-multiplexing circuitry for implantable dimension and blood-flow measurement systems
p0017 N81-11630

MULTIPLIER PHOTOTUBES
U PHOTOMULTIPLIER TUBES

MULTISPECTRAL BAND SCANNERS
Medical diagnosis system and method with multispectral imaging --- depth of burns and optical density of the skin
[NASA-CASE-NPO-14402-1] p0171 N81-27783

MULTIVARIATE STATISTICAL ANALYSIS
NT COVARIANCE
NT DISCRETE FUNCTIONS
NT REGRESSION ANALYSIS

MUSCLES
NT MYOCARDIUM
Problems of the physiology of motions --- Russian book

p0026 A81-15426
Discharge frequency of individual motor units under voluntary control of the isometric tension of human muscles
p0026 A81-15430
Volume conduction of action potentials and propagation velocity of excitation in fibers of motor units of skeletal muscles in man
p0027 A81-15434
The influence of weightlessness on skeletal muscles and neuro-muscular plates
[IAF PAPER 80-C-119] p0049 A81-18289
Correlation between vestibular sensitization and leg muscle relaxation under weightlessness simulated by water immersion
[IAF PAPER 80-C-128] p0049 A81-18294
Cyclic AMP system in muscle tissue during prolonged hypokinesia
[NASA-TM-76186] p0035 N81-13627
Role of the middle ear muscle apparatus in mechanisms of speech signal discrimination
[NASA-TM-76408] p0036 N81-13628
Bioelectrical activity of limb muscles during cold shivering of stimulation of the vestibular apparatus
[NASA-TM-76338] p0058 N81-15675
Change in energy expenditure and brain and adrenal content of catecholamines in rats during muscular loading and hypokinesia
[NASA-TM-76148] p0109 N81-20697
Multifunctional transducer
[NASA-CASE-NPO-14329-1] p0111 N81-20703
Effect of inaction on function of fast and slow muscle spindles
[NASA-TM-76374] p0113 N81-20720
Study on contraction and relaxation of experimentally denervated and immobilized muscles: Comparison with dystrophic muscles
[NASA-TM-76053] p0114 N81-20724
A motion cycle simulator for analysis and optimization of human power
p0138 N81-23797
Estimation of myodynamic parameter values from observations on isometrically contracting muscle groups
[CSIR-TWISK-153] p0152 N81-25663
Analysis of stretch responses of a myocybernetic model muscle fibre
[CSIR-TWISK-167] p0152 N81-25664
Discrete approximation of a continuous myocybernetic model of skeletal muscle
[CSIR-SWISK-18] p0195 N81-29771
Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight
p0228 N81-32838
Effect of flight aboard Cosmos-936 biosatellite on contractile properties of rat muscle fibers
p0235 N81-33790
MUSCULAR FATIGUE
Effects of fatigue on the series elastic component of human muscle
p0003 A81-11194
Interactions between fatigue, muscle temperature, blood flow and the surface EMG
p0108 A81-30279
Respiratory muscle fatigue during cardiogenic shock
p0201 A81-45177
Quantification through the surface EMG of muscle fatigue and recovery during successive isometric contractions
p0205 A81-47107
Calcium uptake in trained and exhausted animals
p0014 N81-10686
The investigation of metabolic and cardiovascular responses to fatiguing static effort
[AD-A094804] p0154 N81-25675
MUSCULAR FUNCTION
Effects of expiratory loading on respiration in humans
p0002 A81-10620
Discharge frequency of individual motor units under voluntary control of the isometric tension of human muscles
p0026 A81-15430
Information conversion in the neuron structure of a model of the spinal level of muscle-contraction control
p0026 A81-15431
A method for the investigation of proprioception reflexes in man
p0027 A81-15432
A functional model of skeletal muscle
p0027 A81-15433
Efficiency of the rat heart and muscular system following physical training and hypokinesia
p0044 A81-17050
The effects of different levels of motor activity on sweat electrolyte composition
p0123 A81-30740
Diaphragmatic and genioglossal electromyogram responses to CO2 rebreathing in humans
p0131 A81-33726
A quantitative analysis of preliminary postural components of complex voluntary motion
p0177 A81-41780
Protein synthesis rates in atrophied gastrocnemius muscles after limb immobilization
p0178 A81-41788
Ultrastructural studies of the mitochondriae in the striated muscles of birds with regard to experimental hypokinesis
[NASA-TM-76203] p0034 N81-13616
Cyclic AMP system in muscle tissue during prolonged hypokinesia
[NASA-TM-76186] p0035 N81-13627
Identification of the human lower extremity in torsion
p0058 N81-15670
Electrostimulation of muscles as a method for the treatment and prophylaxis of hemodynamic disturbances during prolonged hypokinesia
[NASA-TM-76318] p0058 N81-15672
Effect of cervicolabyrinthine impulsation on the spinal reflex apparatus
[NASA-TM-76375] p0074 N81-16726
Study on contraction and relaxation of experimentally denervated and immobilized muscles: Comparison with dystrophic muscles
[NASA-TM-76053] p0114 N81-20724
Morphological changes in different types of rat muscle fibers during long-term hypokinesia
p0184 N81-28707
Structural changes in the soleus muscle of rats flown aboard the cosmos series of biosatellites and submitted to hypokinesia
p0192 N81-29745
Effect of flight aboard Cosmos-936 biosatellite on contractile properties of rat muscle fibers
p0235 N81-33790
MUSCULAR STRENGTH
Towards an objective assessment of the 'maximal voluntary contraction' component in routine muscle strength measurements
p0003 A81-11193
The specificity of endurance training on muscular power and muscle fibre size
p0006 A81-12253
Neck muscle resistance to head impact
p0081 A81-23390
Active muscle force and moment response of the human arm and shoulder
p0205 A81-47103
MUSCULAR TONUS
Morphological changes in different types of rat muscle fibers during long-term hypokinesia
p0184 N81-28707

Volume conduction of action potentials and propagation velocity of excitation in fibers of motor units of skeletal muscles in man

p0027 A81-15434
Cosmos 1129 - Spaceflight and bone changes
p0132 A81-33899
Body position stabilization - A fundamental problem of postural regulation
p0177 A81-41779
Enhanced skeletal muscle insulin sensitivity in year-old rats adapted to hypergravity
p0179 A81-42023
Age-related reactions of rat bones to their unloading --- effect of simulated weightlessness
p0205 A81-47108
Electrostimulation of muscles as a method for the treatment and prophylaxis of hemodynamic disturbances during prolonged hypokinesia
[NASA-TM-76318] p0058 N81-15672
Vasomotion patterns in skeletal muscle in normal and hypertensive rats
p0091 N81-18625
Experimental joint immobilization in guinea pigs. Effects on the knee joint
[NASA-TM-76067] p0109 N81-20696
Effect of space flight factors on ultrastructure of skeletal muscles
p0119 N81-21754
Kinematic modelling and osteometric scaling of anatomical joints and skeletal systems
p0148 N81-24713
Evaluation of human power capacity through olympic weightlifting analyses
p0167 N81-26694
USSR Report: Space Biology and Aerospace Medicine, vol. 14, no. 6
[JPRS-77311] p0183 N81-28699
Morphological effects of weightlessness and pathogenesis thereof
p0187 N81-28732
Practical activation and retention of locomotion constraints in neuromusculoskeletal control system models
[CSIR-TWISK-184] p0195 N81-29769
MYOSIM, a computer program for simulating myocybernetic models of skeletal muscle
[CSIR-TWISK-176] p0195 N81-29770

MUTATIONS
The estimation of genetic divergence
p0161 A81-40200
The role of weightlessness in the genetic damage from preflight gamma-irradiation of organisms in experiments aboard the Salyut 6 orbital station
p0164 A81-40376
Origin of life between Scylla and Charybdis --- computerized simulation of primordial chemical evolution
p0223 A81-48725
Molecular basis of the mutagenic and lethal effects of ultraviolet irradiation
[DOE/EV-02814/1] p0017 N81-11629
Effects of accelerated heavy ions on bacillus subtilis spores: Inactivation, repair and mutation induction
p0207 N81-30787
Molecular basis of the mutagenic and lethal effects of ultraviolet irradiation
[DE81-028535] p0230 N81-32849
Flour beetle reproduction and mutability in weightlessness (experiments aboard Salyut-6 orbital station)
p0236 N81-33793

MYOCARDIAL INFARCTION
Echocardiography in acute and remote myocardial infarction
p0041 A81-16660
Value of radionuclide imaging techniques in assessing cardiomyopathy
p0041 A81-16662
Geomagnetic-biological correlations - Some new results
p0084 A81-24154
Echocardiography in aviation medicine
p0212 N81-31831
Prevention of cardiovascular diseases
p0212 N81-31836
Cardiovascular problems during the pilots career
p0212 N81-31837

MYOCARDIUM
Myocardial adenosine and coronary resistance during increased cardiac performance
p0003 A81-10773
The importance of myocardial perfusion in the pathogenesis of the cardiac pathology associated with +Gz exposure in miniature swine
p0022 A81-13502
Ventricular aneurysm - Cross-sectional echocardiographic approach
p0040 A81-16655
Value and limitations of two dimensional echocardiography in assessment of cardiomyopathy
p0041 A81-16661
Regional myocardial blood flow, metabolism and function assessed noninvasively with positron emission tomography
p0042 A81-16666
Types of cardiorespiratory responses produced during acute hypoxia
p0123 A81-30741
The cardiac cycle --- Russian book
p0165 A81-40628
Antibodies to myofibril antigens in cosmonauts after spaceflights
[NASA-TM-76300] p0073 N81-16722
Ultrastructure of the myocardium of rats flown aboard the Cosmos-936 biosatellite
p0119 N81-21755
The effect of short-term antiorthostatic hypokinesia on central and intracardiac hemodynamics and metabolism of a healthy person
[NASA-TM-76525] p0134 N81-22689
Effect of simulated gravity on the chick embryo myocardium
p0184 N81-28711
Catecholamines and enzymes of their metabolism in the rate myocardium following a long-term space flight
p0192 N81-29747
Changes in bioelectrical activity of the myocardium of flight personnel under the influence of their work load
p0194 N81-29762

Results of the study of the vestibular apparatus and the functions of the perception of space in cosmonauts (pre- and post-flight observations)
[NASA-TM-76485] p0092 N81-18639
Understanding understanding
[AD-A096290] p0120 N81-21765
Knowledge compilation: Mechanisms for the automatization of cognitive skills
[AD-A096117] p0121 N81-21767
The processing demands of higher order manual control: Application of additive factors methodology
[AD-A098077] p0150 N81-24728
Perception of instrument data as related to flying experience
p0185 N81-28721
Comprehension and analysis of information in text. 4: Decision and verification processes
[AD-A102677] p0232 N81-32863
PERCEPTUAL ERRORS
The effects of spatial frequency and target type on perceived duration
p0051 A81-19570
The contribution of visual persistence to the perceived duration of brief targets
p0051 A81-19571
Evaluation and prediction of the vertical situation from a horizontal situation display --- pilot perception of motion and separation in cockpit display of air traffic information
p0066 A81-20503
Observed compensation for projective distortion of graphic displays
[AD-A090188] p0018 N81-11637
PERFORMANCE PREDICTION
NT PREDICTION ANALYSIS TECHNIQUES
Prediction of pilot performance
p0028 A81-15687
An analysis of the human as a predictor model
p0066 A81-20511
Predicting search performance for multiple targets --- in human operator visual tasks
p0066 A81-20917
Spatial and temporal factors in the predictive generation of saccadic eye movements
p0088 A81-25892
The selection of air traffic control specialists - History and review of contributions by the Civil Aeromedical Institute, 1960-80
p0125 A81-31541
Towards a behavioral theory of bias in signal detection
p0144 A81-37254
An improved approach to predicting pilot rating behavior
p0203 A81-46282

PERFORMANCE TESTS
Manipulation and measurement of concurrent-task performances
p0028 A81-15688
Reliable, objective flight checks --- real time pilot performance scoring
p0028 A81-15689
Evaluation of the Hewlett-Packard ear oximeter for use during routine air transport of patients
p0143 A81-34307
Indices of cardiac status
p0180 A81-42626
Space Shuttle life support systems - A status report
[IAF PAPER 81-181] p0219 A81-47394
Pilot performance as a function of peripheral cues and color in computer generated images
p0222 A81-48362
Cues reduce direction uncertainty and enhance motion detection
p0223 A81-49673
An automated indirect blood pressure instrument based upon ultrasound
p0014 N81-10689
Performance of the Scott Aviox emergency oxygen system after exposure to normal, hot and cold storage conditions
[AD-A090572] p0033 N81-12738
PERFUSION
U DIFFUSION
PERIODIC VARIATIONS
NT ANNUAL VARIATIONS
Ventilation, perfusion, and cardiogenic oscillations of the single-breath N2 test

U PERIODIC VARIATIONS
PERIODICITY (BIOLOGY)
U RHYTHM (BIOLOGY)
PERIPHERAL CIRCULATION
Characteristics of the response of the peripheral blood of the rat to vertical whole-body vibration
p0129 A81-32151
The influence of lower body negative pressure tests on peripheral hemodynamics indicators
p0201 A81-44895
PERIPHERAL EQUIPMENT (COMPUTERS)
NT CONSOLES
NT REMOTE CONSOLES
PERIPHERAL VISION
Training of pattern recognition by central and peripheral vision
p0124 A81-30743
Visual-vestibular interactions - The directional component of visual background movement
p0142 A81-34306
Two-dimensional filtering, oriented line detectors, and figural aspects as determinants of visual illusions
p0144 A81-37252
Peripheral cues and color in visual simulation
[AD-A089837] p0031 N81-12726
PERMEABILITY
Lack of hyperbaric O2 effect on blood-brain barrier permeability in conscious rats
p0090 A81-26773
Changes in mast cells and in permeability of mesenteric microvessels under the effect of immobilization and electrostimulation
[NASA-TM-75988] p0109 N81-20694
PERMEATING
Permeation of protective garment material by liquid halogenated ethanes and a polychlorinated biphenyl
[LA-8572-MS] p0115 N81-20732
PERMITTIVITY
Dielectric behavior of selected animal tissues in vitro at frequencies from 2 to 4 GHz
p0125 A81-31167
PEROXIDES
NT HYDROGEN PEROXIDE
PERSONALITY
Stress and adaptation - The interaction of the pilot personality and disease
p0023 A81-13510
The physician's determination of personnel reliability in sensitive occupations
p0071 A81-22114
Personality and inter-subject differences in performance and physiological cost during whole-body vibration
p0157 A81-38193
PERSONALITY TESTS
Investigation of psychophysiological manifestations of emotionality in 10- to 20-year olds
p0045 A81-17083
Certain personality characteristics as related to success of pilot training
p0014 N81-10684
Psychophysiological screening: Status and prospects
p0186 N81-28725
The effects of gender and instructions on calibration

POLYMERIZATION
Compartmentalization of self-reproducing machineries - Multiplication of microsystems with self-instructing polymerization of amino acids

p0048 A81-17988
Oligouridylates as a template for nonenzymatic synthesis of oligoadenylates --- prebiotic polynucleotide replication
p0143 A81-34919
Synthesis of oligoguanylates on oligocytidylate templates --- on primitive earth
p0202 A81-45490
Condensation of activated diguanylates on a Poly/C/ template --- prebiotic polynucleotide replication mechanism
p0202 A81-45499
POLYNUCLEOTIDES
Enhancement of peptide bond formation by polyribonucleotides on clay surfaces in fluctuating environments
p0131 A81-33797
Oligoadenylates formation on an oligouridylate template in the presence of a lead catalyst
p0132 A81-33799
Oligouridylates as a template for nonenzymatic synthesis of oligoadenylates --- prebiotic polynucleotide replication
p0143 A81-34919
Condensation of activated diguanylates on a Poly/C/ template --- prebiotic polynucleotide replication mechanism
p0202 A81-45499
POLYPEPTIDES
Enantiomer enrichment in early peptides
p0128 A81-32063
POLYVINYL CHLORIDE
Experimental intoxications by PVC thermal degradation products - Study of the respiratory tract lesions
p0200 A81-44857
Development of improved SH-3 helicopter seat cushions
[AD-A103484] p0240 N81-33822
POPULATION THEORY
Preliminary analysis of motion sickness incidence data
[AD-A096750] p0138 N81-22691
PORPHYRINS
NT CHLOROPHYLLS
PORTABLE EQUIPMENT
Instruments and attachments for electronystagmography
[NASA-TM-76365] p0060 N81-15683
PORTABLE LIFE SUPPORT SYSTEMS
An improved oxygen mask for high-altitude protection
p0069 A81-22081
POSITION (LOCATION)
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements
p0072 A81-23099
Detection of noisy visual targets - Models for the effects of spatial uncertainty and signal-to-noise ratio
p0181 A81-42627
POSITIONING
Anthropomorphic dummy positioning and repeatability measurements
[PB81-212367] p0240 N81-33825
POSITRONS
Regional myocardial blood flow, metabolism and function assessed noninvasively with positron emission tomography
p0042 A81-16666
Investigations of electron helicity in optically active molecules using polarized beams of electrons and positrons
p0127 A81-32055
POSTULATES
U AXIOMS
POSTURE
On the role of dynamic models in quantitative posturography
p0004 A81-11231
Blood pressure and oxygenation in different cardiovascular compartments of a normal man during postural exposures
p0023 A81-13508
Autonomic mechanisms in the initial heart rate response to standing
p0024 A81-13920
Hemodynamics of the healthy man under moderate physical loads in the lying and sitting positions

p0044 A81-17080
Changes in pressure within thigh and foot vessels
during postural activity
p0123 A81-30739
Effects of whole-body vibrations on perception and
control of posture and movement
p0161 A81-40094
Body position stabilization - A fundamental
problem of postural regulation
p0177 A81-41779
A quantitative analysis of preliminary postural
components of complex voluntary motion
p0177 A81-41780
The prone protected posture
[AD-A089818] p0017 N81-11632
Significance of vestibular and proprioceptive
afferentation in the regulation of human posture
[NASA-TM-76470] p0060 N81-15686
Functional asymmetry of posture and body system
regulation
[NASA-TM-76401] p0060 N81-15687
A foundation for systems anthropometry
[AD-A094395] p0093 N81-18643
A motion cycle simulator for analysis and
optimization of human power
p0138 N81-23797
Mathematical modeling of human cardiovascular
system reactions during postural and exercise
tests --- effects of gravity factors
p0191 N81-29743
Linear discriminant function used to assess
cosmonaut reaction to LBNP
p0233 N81-33772

POTABLE LIQUIDS
NT POTABLE WATER
POTABLE WATER
Environmental contaminants in food. Volume 2,
part B: Working papers
[PB-116774] p0080 N81-17716
Toxicological and hygienic studies of water
recycled from oxidant-containing fluids
p0193 N81-29751
Evaluation of methods for mineralizing recycled
potable water using a conductometer
p0194 N81-29758
POTASSIUM
Effect of low-potassium diet on rat exercise
hyperthermia and heatstroke mortality
p0177 A81-41785
Effect of physical activity on body composition
[BNL-28008] p0017 N81-11633
POTASSIUM COMPOUNDS

PRESSURE CABINS
U PRESSURIZED CABINS
PRESSURE CHAMBERS
NT HYPERBARIC CHAMBERS
Effect of ionized air environment on human
hormonal systems
p0185 N81-28718
PRESSURE EFFECTS
Pressure variations and the inner ear during diving
p0008 A81-12756
Flight after diving --- flight safety considerations
p0008 A81-12757
Observations on inner ear and pressure variations
p0160 A81-39670
Pressure-flow hysteresis in the pulmonary
vasculature
p0073 N81-16721
PRESSURE GRADIENTS
Permissible rates of barometric pressure changes
--- human tolerance in flight environment
p0103 A81-27396
Components of alveolar-arterial O2 gradient during
rest and exercise at sea level and high altitude
p0161 A81-40295
PRESSURE MEASUREMENTS
An experimental and theoretical investigation of
the oscillometric method of indirect blood
pressure measurement
p0035 N81-13625
Aortic blood flow estimation from pressure
measurements
p0092 N81-18632
Non-invasive method and apparatus for measuring
pressure within a pliable vessel
[NASA-CASE-ARC-11264-1] p0237 N81-33804
PRESSURE PROBES
U PRESSURE SENSORS
PRESSURE REDUCTION
Optimization of decompression on the basis of
chest impedance
p0124 A81-30746
Pressure harvesting of microalgae
[PB80-221781] p0054 N81-14609
Extravehicular Crewman Work System (ECWS) study
program: Prebreathe elimination study
[NASA-CR-167390] p0232 N81-32866
PRESSURE REGULATORS
Prosthetic urinary sphincter
[NASA-CASE-MFS-23717-1] p0152 N81-25660
Ion beam sputter-etched ventricular catheter for
hydrocephalus shunt
[NASA-CASE-LEW-13107-1] p0171 N81-27786
PRESSURE SENSORS
Non-invasive method and apparatus for measuring
pressure within a pliable vessel
[NASA-CASE-ARC-11264-1] p0237 N81-33804
PRESSURE SUITS
NT SPACE SUITS
The use of anti-gravity suits for the control of
critical intra-abdominal hemorrhage
[NASA-TM-75786] p0093 N81-18641
PRESSURE TRANSDUCERS
U PRESSURE SENSORS
PRESSURIZED CABINS
Optimum atmosphere in pressurized cabins and
future use thereof
p0186 N81-28728
PRESSURIZING
Pressure harvesting of microalgae

RATS
Toxicology and metabolism of nickel compounds
[DOE/EV-03140/5] p0036 N81-13629
Effects of centrifugation on gonadal and
adrenocortical steroids in rats
[NASA-CR-163858] p0057 N81-15663
Hemorheological changes, the state of
microcirculation, and blood acid-base balance in
rats under conditions of a 30-day limiting of
the motor activity
[NASA-TM-76464] p0073 N81-16719
Chronic toxicity of lead and cadmium. 1: Changes
in the central nervous system of the parental
generation of rats after chronic intoxication
with lead and cadmium
[PB81-110850] p0091 N81-18630
Age characteristics of changes in invertase
activity of the mucous membrane of the small
intestine
[NASA-TM-76385] p0092 N81-18637
Changes in mast cells and in permeability of
mesenteric microvessels under the effect of
immobilization and electrostimulation
[NASA-TM-75986] p0109 N81-20694
Activity of certain enzymes in subcellular
fractions of rat liver after flight on Cosmos
1129 biosatellite
[NASA-TM-76472] p0110 N81-20701
Stress antagonizes morphine-induced analgesia in
rats
[NASA-TM-81282] p0116 N81-21732
Metabolism of fatty acids in rat brain in
microsomal membranes
[UCLA-12/1289] p0147 N81-24710
To develop behavioral tests of vestibular
functioning in the Wistar rat
[NASA-CR-164537] p0170 N81-27778
Morphological changes in different types of rat
muscle fibers during long-term hypokinesia
p0184 N81-28707
Corticosteroid content of rat adrenals in the
presence of hypokinesia combined with graded
physical exercise
p0184 N81-28708
Animal experiments aboard biosatellites of the
Cosmos series: Results and prospects
p0186 N81-28731
Morphological effects of weightlessness and
pathogenesis thereof
p0187 N81-28732
Effects of the Cosmos 1129 Soviet paste diet on
body composition in the growing rat
[NASA-CR-164725] p0209 N81-31810
Chemical characterization and toxicologic
evaluation of airborne mixtures
[AD-A102678] p0231 N81-32855
Age-related changes in body and visceral weight of
Wistar rats
p0236 N81-33797
Method of testing white rat elevator response
p0237 N81-33798
RBE
U RELATIVE BIOLOGICAL EFFECTIVENESS (RBE)
REACTION KINETICS
Kinetic aspects of the chemical protection of
proteins against the effects of radiation
p0105 A81-28882
Synthesis of oligoguanylates on oligocytidylate
templates --- on primitive earth
p0202 A81-45498
Condensation of activated diguanylates on a
Poly/C/ template --- prebiotic polynucleotide
replication mechanism
p0202 A81-45499
Development of a preprototype sabatier CO2
reduction subsystem
[NASA-CR-160885] p0056 N81-14624
Local existence for the Cauchy problem of a
reaction-diffusion system with discontinuous
nonlinearity
[AD-A100564] p0108 N81-20744
REACTION RATE
U REACTION KINETICS
REACTION TIME
Changes in the rate of verbal reactions to the
separate visual stimulation of the right and
left visual fields
p0045 A81-17088
Direct and indirect perception of size
p0047 A81-17241
The application of additive factors methodology to
workload assessment in a dynamic system
monitoring task
[AD-A094310] p0096 N81-18665
Nuclear survivability/vulnerability of aircrews:
An experimental approach
[AD-A095501] p0114 N81-20729
The processing demands of higher order manual
control: Application of additive factors
methodology
[AD-A098077] p0150 N81-24720
Influence of beta blocking atenolol and other
medication on the reaction time of the visual
system
p0160 N81-26716
REACTIVITY
Synthesis, characterization and reactivity of
electron rich transition metal organometallic
complexes
p0035 N81-13621

REACTOR MATERIALS
Biofilm development and destruction --- biofouling in reactors
[EPRI-CS-1554] p0091 N81-10628
READING
The map context as a source of perceptual error in graduated circle maps --- psychophysical test
p0015 N81-10698
Instrumentation and software for the collection, analysis, and interpretation of eye movement data during reading
[AD-A100495] p0188 N81-28743
Comprehension and analysis of information in text. 4: Decision and verification processes
[AD-A102677] p0232 N81-32863
REAL TIME OPERATION
Reliable, objective flight checks --- real time pilot performance scoring
p0028 A81-15609
Microprocessor-based real time system for eye motion analysis
p0125 A81-31522
The ultimate resolution criterion for out-of-the-cockpit visual scene generation in real time
p0159 A81-39396
REAL VARIABLES
NT DIFFERENTIAL EQUATIONS
NT NONLINEAR EQUATIONS
NT PARTIAL DIFFERENTIAL EQUATIONS
REBREATHING
A comparison between freon and acetylene rebreathing for measuring cardiac output --- in exercise test
p0022 A81-13505
Diaphragmatic and genioglossal electromyogram responses to CO2 rebreathing in humans
p0131 A81-33726
RECEIVERS
NT TELEVISION RECEIVERS
RECEPTORS (PHYSIOLOGY)
NT CHEMORECEPTORS
NT GRAVIRECEPTORS
NT PHOTORECEPTORS
NT THERMORECEPTORS
Problems of the physiology of motions --- Russian book
p0026 A81-15426
Neural control of motor activity
p0026 A81-15427
Avoidance learning and mechanism of the protective effect of apomorphine against hypoxia
p0142 A81-34305
Circumnutation augmented in clinostatted plants by a tactile stimulus
p0163 A81-40369
RECLAMATION
NT WATER RECLAMATION
RECOGNITION
NT PATTERN RECOGNITION
NT SPEECH RECOGNITION
NT TARGET RECOGNITION
RECONNAISSANCE
NT AERIAL RECONNAISSANCE
RECONNAISSANCE AIRCRAFT
NT MIRAGE AIRCRAFT
Performance of the Scott Aviox emergency oxygen system after exposure to normal, hot and cold storage conditions
[AD-A090572] p0033 N81-12738
Computer simulation of human performance in electronic processed imagery systems
[AD-A097622] p0139 N81-23801
RECORDING
NT DATA RECORDING
NT MAGNETIC RECORDING
Main principles and technique of electronystagmography (a brief survey of the literature)
[NASA-TM-76366] p0060 N81-15684
RECORDING INSTRUMENTS
The continuous recording of ECGs by the Holter method /Technical details/
p0043 A81-16686
RECORDS
Automated medical information system of the Los Alamos Scientific Laboratory
[LA-UR-80-2160] p0055 N81-14621
RECOVERABLE SPACECRAFT
NT SPACE SHUTTLES
RECURSION FORMULAS
U RECURSIVE FUNCTIONS
RECURSIVE FUNCTIONS
A recursive Lagrangian formulation of manipulator dynamics and a comparative study of dynamics formulation complexity
p0067 A81-21020
RECYCLING
Evaluation of methods for mineralizing recycled potable water using a conductometer
p0194 N81-29750
RED BLOOD CELLS
U ERYTHROCYTES
REDOX CELLS
Dynamics of the state of redox systems in structural elements of the cerebral cortex during oxygen deficiency /cytophotometric study in vivo/
p0065 A81-19900
REDUCED GRAVITY
Man in the state of low gravity - Physiological problems, clinical aspects, and measures for prevention and protection
p0044 A81-16900
On different sensitivities of microorganisms to lowered gravitation
p0164 A81-40377
REDUCTION (CHEMISTRY)
Fractional capacity electrolyzer development for CO2 and H2O electrolysis
[NASA-CR-166149] p0121 N81-21770
REDUCTION (MATHEMATICS)
U OPTIMIZATION
REFERENCES (STANDARDS)
U STANDARDS
REFLECTANCE
NT SPECTRAL REFLECTANCE
REFLEXES
NT CONDITIONED REFLEXES
NT RESPIRATORY REFLEXES
NT VESTIBULAR NYSTAGMUS
Effects of whole-body vibration on spinal reflexes in man
p0023 A81-13507
The nonspecific motor activation reflex in man /the startle reflex/ and its dependence on the state of attention
p0026 A81-15429
A method for the investigation of proprioception reflexes in man
p0027 A81-15432
Effect of cervicolabyrinthine impulsation on the spinal reflex apparatus
[NASA-TM-76375] p0074 N81-16726
Regional analgesia by conduction anesthesia and reflex therapy in the acute recovery period following antiorthostatic hypokinesia
p0118 N81-21749
Method of testing white rat elevator response
p0237 N81-33798
REFRACTION
Conventional optical correction of ametropias in aeronautics
p0214 N81-31850
REFRIGERATING
On-board feeding - Its goals, its risks and their prevention
p0082 A81-23501
REGENERATION (ENGINEERING)
Toxicological and hygienic studies of water recycled from oxidant-containing fluids
p0193 N81-29751
REGENERATIVE CYCLES
U REGENERATION (ENGINEERING)
REGIONS
NT LUMBAR REGION
NT POLAR REGIONS
NT TROPICAL REGIONS
REGRESSION (STATISTICS)
U REGRESSION ANALYSIS
REGRESSION ANALYSIS
NT REGRESSION COEFFICIENTS
Oxygen uptake and energy expenditure during horizontal treadmill running
p0002 A81-10618
Log-linear regression method used to assess quality of air samples in fluoroplastic containers

p0236 N81-33796
REGRESSION COEFFICIENTS
A Monte Carlo study: Robustness of analysis of covariance to violation of selected assumptions
p0151 N81-24733
REGULATIONS
NATO regulations on the cardio-vascular system
p0211 N81-31829
REGULATORS
NT FLOW REGULATORS
NT PRESSURE REGULATORS
NT RELIEF VALVES
The basic motion regulation system for a quadruped walking vehicle
[ASME PAPER 80-DET-34] p0050 A81-18656
REHEATING
U HEATING
REINFORCEMENT (PSYCHOLOGY)
The effects of cognitive and behavioral control on post-stress performance
p0131 A81-33325
RELATIVE BIOLOGICAL EFFECTIVENESS (RBE)
Biological hazards associated with cosmic-ray and solar flare exposures
p0007 A81-12463
RELAXATION (PHYSIOLOGY)
The viscoelastic behavior of the human intervertebral disc
p0111 N81-20705
Study on contraction and relaxation of experimentally denervated and immobilized muscles: Comparison with dystrophic muscles
[NASA-TM-76053] p0114 N81-20724
Training for relaxation. An experiment at the military flight school
[FOA-C-59003-H5] p0213 N81-31841
RELIABILITY
Changes of psychometric coefficients and factor structure as a function of test practice
[DFVLR-FB-80-15] p0055 N81-14622
RELIABILITY ANALYSIS
Evaluation of the reliability of a solution from results of ergatic-system simulation
p0180 A81-42601
RELIABILITY CONTROL
U QUALITY CONTROL
U RELIABILITY ENGINEERING
RELIABILITY ENGINEERING
On increasing reliability of cosmonaut-operator's activity
[IAF PAPER 81-255] p0219 A81-47427
RELIEF VALVES
Prosthetic urinary sphincter
[NASA-CASE-MFS-23717-1] p0152 N81-25660
Ion beam sputter-etched ventricular catheter for hydrocephalus shunt
[NASA-CASE-LEW-13107-1] p0171 N81-27786
REMOTE CONSOLES
Remote Medical Diagnosis System (RMDS): Evaluation of the AN/FTA-28 telephone terminal interface
[AD-A094831] p0099 N81-19762
REMOTE CONTROL
Advanced control techniques for teleoperation in earth orbit
p0072 A81-22610
Man-machine communication in remote manipulation Task-Oriented Supervisory Command language (TOSC)
[AD-A094482] p0097 N81-18666
Remote operator performance using bandwidth-limited TV displays: A review and proposal
[AD-A100430] p0189 N81-28754
REMOTE HANDLING
Master-slave manipulator performance for various dynamic characteristics and positioning task parameters
p0067 A81-21024
REMOTE MANIPULATOR SYSTEM
Robots leap into the space age
p0125 A81-31300
The design of two-sided-action servo systems --- Russian book on remote manipulators
p0127 A81-31875
Kinesthetic coupling between operator and remote manipulator
p0220 A81-47986
Shuttle remote manipulator system hardware test facility
p0053 N81-14146
The role of the real-time simulation facility, SIMFAC, in the design, development and performance verification of the Shuttle Remote Manipulator System (SRMS) with man-in-the-loop
p0053 N81-14147
REMOTE SENSING
The application of human visual system processing techniques to remotely sensed data
p0083 A81-23651
Teaching/learning principles
p0227 N81-32572
RENAL FUNCTION
Renal responses to central vascular expansion are suppressed at night in conscious primates
p0003 A81-10775
Plasma renin activity, vasopressin concentration, and urinary excretory responses to exercise in men
p0042 A81-16677
The military aviator with renal stone disease
p0159 A81-38850
The functional condition of the adrenal cortex and kidneys of a healthy man during prolonged antiorthostatic hypokinesia
p0201 A81-44896
The regulation of calcium exchange under conditions of prolonged antiorthostatic hypokinesia
p0201 A81-44897
Renal function and gluCOrticoid activity of the adrenal cortex during immersion
p0012 N81-10673
Urinary metallothionein as a biological indicator of occupational cadmium exposure
[BNL-29064] p0188 N81-28746
REPAIRING
U MAINTENANCE
REPRODUCTION (BIOLOGY)
A theory for the origin of a self-replicating chemical system. I - Natural selection of the autogen from short, random oligomers
p0043 A81-16707
Compartmentalization of self-reproducing machineries - Multiplication of microsystems with self-instructing polymerization of amino acids
p0048 A81-17988
Effect of exercise, vitamin and mineral supplements on reproductive function of albino rats during prolonged hypokinesia
p0013 A81-10677
Flour beetle reproduction and mutability in weightlessness (experiments aboard Salyut-6 orbital station)
p0236 N81-33793
REPUBLIC AIRCRAFT
NT A-10 AIRCRAFT
REPUBLIC MILITARY AIRCRAFT
U MILITARY AIRCRAFT
RESCUE OPERATIONS
Crew stress and fatigue in the PAVE
[AD-A091668] p0055 N81-14620
RESEARCH
NT GAME THEORY
NT OPERATIONS RESEARCH
Animal facilities and resources supporting biomedical research in the United States in fiscal year 1978
[PB80-210636] p0035 N81-13620
Toxicology and metabolism of nickel compounds
[DE81-028924] p0230 N81-32850
RESEARCH FACILITIES
Literature sources in toxicology: A survey
[BLL-BLRDR-5542] p0239 N81-33814
RESINS
NT EPOXY RESINS

RESPIRATION
NT HIGH ALTITUDE BREATHING
NT PRESSURE BREATHING
Ventilation, perfusion, and cardiogenic oscillations of the single-breath N2 test
p0001 A81-10617
Effects of expiratory loading on respiration in humans
p0002 A81-10620
A simple method for measuring oxygen uptake on a single breath basis
p0003 A81-11195
Generation of constant concentrations of thermal decomposition products in inhalation chambers - A comparative study with a method according to DIN 53 436. I - Measurement of carbon monoxide and carbon dioxide in inhalation chambers
p0039 A81-16599
Exchanges of oxygen and carbon dioxide alter inert gas pattern in single-breath tests
p0089 A81-26445
Influence of respiration on stroke volume determined by impedance cardiography
p0158 A81-38846
Initial tests of the combined ECG/Ti animal systems using carbon monoxide exposure
p0200 A81-44859
Genesis of breath sounds-Preliminary verification of theory
[NASA-TM-81897] p0031 N81-12719
Effect of active and passive recovery on subsequent treadmill running performance
p0035 N81-13624
Design and fabrication of a portable minicuvette system for measuring leaf photosynthesis and stomatal conductance under controlled conditions
[UCRL-52895] p0097 N81-19752
Effects of light on respiration and development of photosynthetic cells --- scenedesmus obliquus
[DOE/ER-03231/5] p0098 N81-19755
A respiration apparatus for the clinical determination of the energy turnover in man
[BLL-RTS-12030] p0171 N81-27784
The toxicity of grade JP-5 aviation turbine fuel, a comparison between petroleum and shale-derived fuels
p0172 N81-27793
The oncogenic hazard from chronic inhalation of hydrazine
p0173 N81-27796
A laboratory model for the evaluation of the toxicity of combustion products
p0174 N81-27805
Respiratory reactions to changes in gas environment density at different rates of inspiratory flow
p0185 N81-28714
The application of cardiograms in the valuation of navigation personnel
p0211 N81-31830
Effect of exercise on reactions to breathing a gas mixture with 5% carbon dioxide and 14% oxygen
p0234 N81-33781
RESPIRATORS
Generation of constant concentrations of thermal decomposition products in inhalation chambers - A comparative study with a method according to DIN 53 436. II - Measurement of concentrations of total volatile organic substances in inhalation chambers
p0039 A81-16600
RESPIRATORY DISEASES
NT PNEUMONIA
NT TUBERCULOSIS
Speculations on the pathogenesis of high-altitude pulmonary edema
p0063 A81-19712
RESPIRATORY IMPEDANCE
A comparison of respiratory regulation during transient and steady-state muscular work and in the presence of supplementary resistance
p0044 A81-17079
Influence of small mechanical loads on variability of breathing pattern
p0087 A81-25299
RESPIRATORY PHYSIOLOGY
The respiratory response to microwaves
p0006 A81-12239
Control of breathing during prolonged exercise
p0067 A81-21471
Diffusing capacity of the lung during hypoxia - Role of capillary recruitment
p0068 A81-21474
Physiological mechanisms for the adaptation of the respiratory regulation system to acute high-altitude hypoxia
p0200 A81-44890
Respiratory muscle fatigue during cardiogenic shock
p0201 A81-45177
Chokes - Favorable response to delayed recompression therapy: A case report
p0206 A81-47110
Studies in respiratory control
p0014 N81-10688
Parameter identification techniques for physiological control systems
[AD-A090547] p0032 N81-12728
Hyperbaric oxygenation. Citations from the NTIS data base
[PB80-813769] p0033 N81-12735
Biological effects of short, high-level exposure to gases: Sulfur dioxide
[AD-A094504] p0094 N81-18647
Effect of hyperbaric nitrogen and oxygen atmosphere on activity of respiratory center
p0119 N81-21750
Effects of sulfuric acid mist exposure on pulmonary function
[PB81-208977] p0230 N81-33812
RESPIRATORY RATE
NT HYPOVENTILATION
Influence of small mechanical loads on variability of breathing pattern
p0087 A81-25299
Diaphragmatic and genioglossal electromyogram responses to CO2 rebreathing in humans
p0131 A81-33726
Effects of severe heat stress on respiration and metabolic rate in resting man
p0142 A81-34301
Effects of ethidium bromide on development and aging of Drosophila - Implications for the free radical theory of aging
p0221 A81-48056
Respiratory function at extreme altitudes
[PB80-213010] p0036 N81-13632
Metabolic rate measurement system
[NASA-CR-160893] p0054 N81-14614
Cardiorespiratory and perceptual recovery from a marathon run by novice and experienced women marathon runners
p0073 N81-16720
Effect of level of motor activity on aerobic efficiency in healthy man
p0118 N81-21748
Respiratory reactions to changes in gas environment density at different rates of inspiratory flow
p0185 N81-28714
RESPIRATORY REFLEXES
Volume, flow, and timing of each breath during negative airway pressure in humans
p0089 A81-26446
Diaphragmatic and genioglossal electromyogram responses to CO2 rebreathing in humans
p0131 A81-33726
RESPIRATORY SYSTEM
NT DIAPHRAGM (ANATOMY)
NT LUNGS
NT NOSE (ANATOMY)
A reassessment of a running test as a measure of cardiorespiratory fitness
p0007 A81-12254
Effects of antiorthostatic bedrest on the cardiorespiratory responses to exercise
p0126 A81-31544
Experimental intoxications by PVC thermal degradation products - Study of the respiratory tract lesions
p0200 A81-44857
Biological effects of short, high-level exposure to gases: Ammonia
[AD-A094501] p0093 N81-18644
Biological effects of short, high-level exposure to gases: Nitrogen Oxides
[AD-A094502] p0093 N81-18645

Morphological and functional evaluation of the external respiratory system of rabbits with subacute oxygen toxicity
p0192 N81-29744
Flight related changes in parametes of external respiration in helicopter crews
p0194 N81-29761
Effect of one day immersion on cardiorespiratory parameters of man during exercise
p0234 N81-33770
Method for evaluating respiratory system reaction to increasing hypercapnia
p0236 N81-33795
Method for evaluating respiratory system reaction to increasing hypercapnia
p0237 N81-33801
Aerosol factors affecting respiratory deposition
[DE81-024425] p0238 N81-33809

RESPONSE BIAS
Towards a behavioral theory of bias in signal detection
p0144 A81-37254
Aggregation bias in estimates of perceptual agreement
[AD-A102726] p0232 N81-32864

RESPONSES
NT DYNAMIC RESPONSE
NT HEMODYNAMIC RESPONSES
NT PHYSIOLOGICAL RESPONSES
Response of selected microorganisms to experimental planetary environments
[NASA-CR-164064] p0115 N81-20733

REST
NT BED REST
Cost of locomotion and heat balance during rest and running from 0 to 55 C in a patas monkey
p0024 A81-13919

RESTRAINTS
U CONSTRAINTS

RESUSCITATION
Resuscitation on board long distance flights
p0007 A81-12752

RETARDANTS
NT FLAME RETARDANTS

RETARDING
Visual-vestibular interactions - The directional component of visual background movement
p0142 A81-34306

RETENTION (PSYCHOLOGY)
Phase shifting circadian rhythms produces retrograde amnesia
p0084 A81-24250
Effect of training device on retention and transfer of a procedural task
p0159 A81-38871
Comprehension and analysis of information in text. 4: Decision and verification processes
[AD-A102677] p0232 N81-32863

RETICULOCYTES
Changes in hemoglobin mass during real and simulated space flights
p0183 N81-28702

RETINA
The importance of retinal electrophysiology in the monitoring of prolonged treatment with synthetic antimalarial agents
p0043 A81-16692
Research on ganglion cell responses after laser exposure of the retina
[AD-A087269] p0014 N81-10691
Visual acuity and the balance between receptor density and ganglion cell receptive field overlap
[AD-A089607] p0060 N81-15689
The ultrastructural basis for the photomechanical response in the photoreceptors of the vertebrate retina
p0091 N81-18631
Light adaptation and lateral inhibition in the vertebrate retina
p0167 N81-26696
Primary events in vision
[AD-A095369] p0237 N81-33805

RETINAL ADAPTATION
NT DARK ADAPTATION
NT LIGHT ADAPTATION
Motion and vision. III - Stabilized pattern adaptation
p0029 A81-15788
Regulation of the tracking movements of the eyes under various conditions of visual perception
p0124 A81-30744
Fitness of human vision with exposure to very bright light
p0186 N81-28729
Damaging effects of visible light. Comprehensive report
[DOE/OR-06021/T1] p0188 N81-28747

RETINAL IMAGES
Motion and vision. III - Stabilized pattern adaptation
p0029 A81-15788
Contrast sensitivity difference between spatial sine-wave and square-wave gratings of the human visual system
p0105 A81-28633
Velocity gradients and relative depth perception
p0105 A81-26900
The effects on visual discrimination of image movement across the stationary retina
p0181 A81-43372
Motion sensitivity measured by a psychophysical linearizing technique
p0199 A81-44271
Perceived direction of motion under retinal image stabilization
p0203 A81-46199

RETIREMENT
Reasons for eliminating the 'Age 60' regulation for airline pilots
p0181 A81-43369

REUSABLE SPACECRAFT
NT SPACE SHUTTLES

REVERSE TIME
U REACTION TIME

REYNOLDS NUMBER
Genesis of breath sounds-Preliminary verification of theory
[NASA-TM-81897] p0031 N81-12719

RH-2 HELICOPTER
U UH-1 HELICOPTER

RHEOENCEPHALOGRAPHY
Rheoencephalography in Meniere's disease
[NASA-TM-76387] p0074 N81-16727

RHEOLOGY
Hemorheological changes, the state of microcirculation, and blood acid-base balance in rats under conditions of a 30-day limiting of the motor activity
[NASA-TM-76464] p0073 N81-16719
Aortic blood flow estimation from pressure measurements
p0092 N81-18632

RHEOMETERS
Studies of central and regional hemodynamics by isotope and impedence methods during LBNP
p0013 N81-10678
Rheography in weightlessness
[NASA-TM-76439] p0092 N81-18638

RHYTHM (BIOLOGY)
NT CIRCADIAN RHYTHMS
Programming and feedback in the control of rhythmic motions stimulated by external signals
p0026 A81-15428
Psychophysiological aspects of the superslow rhythmic activity of the brain --- Russian book
p0039 A81-16594
Biological rhythms --- Russian book
p0165 A81-40613
The cardiac cycle --- Russian book
p0165 A81-40620
Biorhythms and work --- Russian book
p0204 A81-46795
Biorhythmological status as one of the criteria for cosmonaut screening
p0011 N81-10666

RIBONUCLEIC ACIDS
The origin of genetic information
p0104 A81-28612
The nucleotide sequence of Beneckea harveyi 5S rRNA --- bioluminescent marine bacterium
p0132 A81-33800
Origin of life between Scylla and Charybdis --- computerised simulation of primordial chemical evolution
p0223 A81-48725

U RIBONUCLEIC ACIDS
ROBOTS
Some aspects of sensing the ambient medium --- by robots
p0001 A81-10050
The design of industrial robots --- Russian book
p0019 A81-13063
Accessible region and synthesis of robot arms
[ASME PAPER 80-DET-101] p0050 A81-18652
Motion simulation of an articulated robotic arm subjected to static forces
[ASME PAPER 80-DET-102] p0050 A81-18653
A hierarchical programming approach to robot assembly
p0064 A81-19841
Partly unmanned machining
p0065 A81-19842
Aspects of the mechanics of a walking robot as a variable-structure system
p0088 A81-26417
Robots leap into the space age
p0125 A81-31300
Supervisory control of manipulators --- Russian book
p0131 A81-33775
Touch-sensing technology - A review
[SME PAPER MSR80-03,] p0200 A81-44651
Proceedings of NBS/Air Force ICAM workshop on robot interfaces
[SME PAPER MSR80-06] p0202 A81-45664
A three roll wrist robot
[SME PAPER MS80-699] p0202 A81-45666
The application of robotic sensors - A survey and assessment
p0220 A81-47982
Robotic actuators - A technology assessment
p0221 A81-47988
A novel design for a robot arm
p0221 A81-47990
Machine intelligence and robotics: Report of the NASA study group
[NASA-TM-82329] p0121 N81-21769
Control of a flexible robot arm
[NASA-CR-164167] p0121 N81-21772
Compilation of a catalog of manipulator arms and industrial robots
[CNTIR-1-4N-02-0-X] p0151 N81-24731
General methods to enable robots with vision to acquire, orient and transport workpieces
[PB81-148934] p0151 N81-24732
ROBUSTNESS (MATHEMATICS)
A Monte Carlo study: Robustness of analysis of covariance to violation of selected assumptions
p0151 N81-24733
ROCKET PROPELLANTS
NT LIQUID ROCKET PROPELLANTS
ROCKS
Amino acids and hydrocarbons approximately 3,800-Myr old in the Isua rocks, southwestern Greenland
p0048 A81-18050
RODENTS
NT GUINEA PIGS
NT HAMSTERS
NT MICE
NT RABBITS
NT RATS

A device for studying the turning reflex in small laboratory animals
p0185 N81-28717
ROLL
Determination of otolith afferent response parameters using small amplitude sinusoidal roll and pitch tilts
p0219 A81-47672
Ergonomic study of the influence of rotary vibrations
[BMVG-FBWT-79-33] p0080 N81-17714
ROLLING MOMENTS
Study of human vestibular reactions to simulated periodic ship rolling
p0118 N81-21751
ROTARY DRIVES
U MECHANICAL DRIVES
ROTARY WING AIRCRAFT
NT HELICOPTERS
NT MILITARY HELICOPTERS
NT UH-1 HELICOPTER
ROTATING
U ROTATION
ROTATING BODIES
NT ROTATING DISKS
Stereotypes for direction-of-movements of rotary controls associated with linear displays - The effects of scale presence and position, of pointer direction, and distances between the control and the display
p0125 A81-31290
ROTATING DISKS
Drag enhancement of microbial slime films on rotating discs
[AD-A097228] p0136 N81-23787
ROTATING ENVIRONMENTS
The dependence of nystagmus direction on cupula position and the direction of endolymph flow during sinusoidal rotation
p0001 A81-10124
Sensation of rotation about a vertical axis with a fixed visual field in different illuminations and in the dark
p0141 A81-34000
Experimental motion sickness - Efficacy of transdermal scopolamine plus ephedrine
p0145 A81-37286
The mechanism of otolithic nystagmus
p0165 A81-40695
Soviet research on artificial gravity
p0187 N81-28733
ROTATING GENERATORS
NT DYNAMOMETERS
ROTATING VEHICLES
U ROTATING BODIES
ROTATION
NT EARTH ROTATION
NT MOLECULAR ROTATION
NT SOLAR ROTATION
Frequency response of the vestibulo-ocular reflex /VOR/ in the monkey
p0081 A81-23389
Eye torsion and the apparent horizon under head tilt and visual field rotation
p0104 A81-28249
Influence of combined visual and vestibular cues on human perception and control of horizontal rotation
p0141 A81-33999
Motion sickness and sensory illusions - Effects of rotations around horizontal axis
p0159 A81-39676
Changes in animal reactivity under the influence of prolonged rotation
p0184 N81-28710
ROTATIONAL FLOW
U FLUID FLOW
RUBBER
Preliminary results of in vitro propagation of Guayule
p0179 A81-42134
Development of guayule (Parthenium argentatum) research in cell culture
[NASA-CR-163945] p0077 N81-17691
Permeation of protective garment material by liquid halogenated ethanes and a polychlorinated biphenyl
[LA-8572-MS] p0115 N81-20732

Enhancement of in vitro Guayule propagation
[NASA-CASE-NPO-15213-1] p0190 N81-29720
RULES
NT FLIGHT RULES
NT INSTRUMENT FLIGHT RULES
RUNNING
Oxygen uptake and energy expenditure during horizontal treadmill running
p0002 A81-10618
Cardiovascular responses to static exercise in distance runners and weight lifters
p0002 A81-10622
A reassessment of a running test as a measure of cardiorespiratory fitness
p0007 A81-12254
Cost of locomotion and heat balance during rest and running from 0 to 55 C in a patas monkey
p0024 A81-13919
Body acceleration distribution and O2 uptake in humans during running and jumping
p0024 A81-13923
Cardiorespiratory and perceptual recovery from a marathon run by novice and experienced women marathon runners
p0073 N81-16720
RUNWAY LIGHTS
Effect of different runway size on pilot performance during simulated night landing approaches
[AD-A103190] p0239 N81-33816
RUNWAYS
Perception of runway image shape and approach angle magnitude by pilots in simulated night landing approaches
p0158 A81-38844
RURAL AREAS
The University of Akron urban air pollution and human health study
[PB81-213282] p0238 N81-33811
RYDBERG SERIES
Physico-chemical investigation of some areas of fundamental significance to biophysics
[DOE/EV-03018/12] p0133 N81-22678

S

SACCADIC EYE MOVEMENTS
A comparison between saccades and quick phases of vestibular nystagmus in the cat
p0021 A81-13241
Oblique saccades of the cat - A comparison between the durations of horizontal and vertical components
p0021 A81-13242
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements
p0072 A81-23099
Spatial and temporal factors in the predictive generation of saccadic eye movements
p0088 A81-25892
The guidance of saccadic eye movements to perceptually mislocalized visual and non-visual targets
p0181 A81-43371
A computer model of saccadic suppression
[AD-A101038] p0195 N81-29774
SACCHARIDES
U CARBOHYDRATES
SAFETY

NT SPACE SUITS
New developments in restraint systems
p0070 A81-22084
Anthropometry: Basic studies and applications. Citations from the NTIS data base
[PB80-813645] p0033 N81-12736
SAFETY FACTORS
Human error in the seventies - Reviewed and projected through the eighties --- aircraft accident investigations review
p0126 A81-31542
Radiation carcinogenesis in man: A critical review
[EML-380] p0061 N81-15690
Comfort and convenience specifications for safety belts: Shoulder belt fit, pressure and pullout forces
[PB81-122152] p0101 N81-19776
Potential health and safety impacts from distribution storage alcohol fuels
[ANL/CNSV/TM-61] p0207 N81-30789
Evaluations of a modified crew seat for the Iroquois
[ARL/APP-REPT-80] p0232 N81-32865
Development of improved SH-3 helicopter seat cushions
[AD-A103404] p0240 N81-33822
SAFETY MANAGEMENT
Nonionizing electromagnetic radiation safety: A program of coordinated federal activities related to biological effects of nonionizing electromagnetic radiation (0-300 GHZ)
[PB80-211212] p0036 N81-13633
Aircrew compliance with standard operating procedures as a component of airline safety
p0061 N81-15695
Fatigue and associated performance decrements in air transport operations
[NASA-CR-166167] p0135 N81-22696
Assessment of the use of human factors in the design of fossil-fired steam-generating systems
[EPRI-CS-1760] p0208 N81-30799
Hearing conservation
p0209 N81-31472
Doing a risk analysis
[CONF-810480-1] p0211 N81-31822
SALINITY
The effects of different levels of motor activity on sweat electrolyte composition
p0123 A81-30740
SALT BATHS
Effects of salts and temperatures on post-irradiation growth of Penicillium exposed to ultraviolet
p0162 A81-40361
SALYUT SPACE STATION
Space flight effects on Paramecium tetraurelia flown aboard Salyut 6 in the Cytos I and Cytos M experiments
p0163 A81-40368
Measurement of the partial oxygen pressure and oxygen utilization in the skin of cosmonauts aboard Salyut 6
p0163 A81-40373
Optical and electron-microscopic studies of the Funaria hygrometrica protonema after cultivation for 96 days in space
p0164 A81-40375
The role of weightlessness in the genetic damage from preflight gamma-irradiation of organisms in experiments aboard the Salyut 6 orbital station
p0164 A81-40376
The CYTOS biological experiments carried out on the Soviet orbital station Salyut 6
p0182 A81-43374
Dynamics of diastolic phase structure during a 140 day space flight
p0011 N81-10669
Results of inflight electrocardiographic studies of Salyut-5 crew
p0012 N81-10670
Study of hemodynamics and phase structure of cardiac cycle in second crew of the Salyut-6 orbital station at rest
p0193 N81-28701
Sensitivity to antibiotics of lactobacilli from digestive tract of Soyuz-13 and Salyut-4 crew members
p0234 N81-33782
Study of digestive tract microflora of Soyuz-13 and Salyut-4 crews
p0234 N81-33783

SINUSES
Development of percutaneous energy transmission systems
[PB81-109381] p0076 N81-16737
SITTING POSITION
The response of a realistic computer model for sitting humans to different types of shocks
p0072 A81-22550

The development and airborne testing of the PALE
seat
[AD-A103663] p0240 N81-33821
SIZE (DIMENSIONS)
Visual judgments of size and distance
p0028 A81-15685
SIZE DISTRIBUTION
NT PARTICLE SIZE DISTRIBUTION
SKELETON
U MUSCULOSKELETAL SYSTEM
SKILLS
U ABILITIES
SKIN (ANATOMY)
NT EPITHELIUM
Measurement of the partial oxygen pressure and
oxygen utilization in the skin of cosmonauts
aboard Salyut 6
p0163 A81-40373
Medical diagnosis system and method with
multispectral imaging --- depth of burns and
optical density of the skin
[NASA-CASE-NPO-14402-1] p0171 N81-27783
Tumorigenesis of diesel exhaust, gasoline exhaust,
and related emission extracts on SENCAR mouse skin
[CONF-800323-4] p0207 N81-30793
Comparison between the heat loss and heat gain
through the lungs and body surface during
hypothermia and its treatment
[DRIC-T-6307] p0211 N81-31825
SKIN TEMPERATURE (BIOLOGY)
A contribution to the topography of temperature
regulation in man
p0003 A81-11197
Influence of air flow and skin temperature on
sweating at the onset, during and following
exercise
p0007 A81-12255
Data acquistion system for thermal stress studies
--- cutaneous heat flow and temperature monitors
for individual human body sites
[ASME PAPER 80-WA/OCE-14] p0067 A81-21125
Skin temperature gradients and heat emission at
various ambient temperatures
p0129 A81-32153
SKULL
NT CRANIUM
Method for attaching cerebral thermocouple wires
to the dog's skull
p0237 N81-33800
SKYLAB PROGRAM
Long-term follow-up of Skylab bone demineralization
p0022 A81-13504
Free fall - A partial unique motion environment
p0047 A81-17239
Cardiac rhythm disturbances observed during the
Apollo and Skylab programs
p0160 A81-39679
Structural and functional changes in man
accompanying the weightlessness in 'Skylab'
flights - A mathematical approach
[IAF PAPER 81-175] p0218 A81-47390
SLANT PERCEPTION
U SPACE PERCEPTION
SLEDS
Computer velocity control of a sled used in impact
studies
p0130 A81-32850
The Space Sled - A European facility for
life-science experiments in Spacelab
p0177 A81-41445
SLEEP
Human sleep - Its duration and organization depend
on its circadian phase
p0025 A81-15161
A polygraph study of the effects of microwaves on
sleep in the rat
p0043 A81-16687
Sleep and mental work capacity
p0045 A81-17085
Distinctions referable to sleep, circadian rhythm
of physiological functions and parameters of
man's performance on the first day after
changing from the usual schedule to split
periods of alternate sleep and wakefulness
p0191 N81-29740
Measuring sleep by wrist actigraph
[AD-A103196] p0238 N81-33807
SLEEP DEPRIVATION
Altered hormonal response to short-term bicycle
exercise in young men after prolonged physical
strain, caloric deficit, and sleep deprivation
p0003 A81-11196
Forty-eight versus twenty-four hour duty for USAF
missile crews: A feasibility study using
subjective measures of fatigue
[AD-A094837] p0154 N81-25673
Sleep distinctions, circadian rhythm of
physiological functions and efficiency of man on
first day after shift in sleeping-waking cycle
p0183 N81-28704
SMOKE
Chemical characterization and toxicologic
evaluation of airborne mixtures
[AD-A102678] p0231 N81-32855
SMOOTHING
Using quadtrees to smooth images
[AD-A090247] p0018 N81-11636
SOCIAL FACTORS
Psychological and psychophysiological effects of
long duration space flight
p0180 A81-42514
Epidemiological basis for the prevention of
coronary heart disease
p0212 N81-31835
SOCIOLOGY
NT SOCIAL FACTORS
Errors in human performance
[AD-A091925] p0076 N81-16738
SOFTWARE (COMPUTERS)
U COMPUTER PROGRAMS
SOIL SCIENCE
Biological studies of Martian soil analogues
p0162 A81-40358
A continuation of base-line studies for
environmentally monitoring Space Transportation
Systems at John F. Kennedy Space Center. Volume
2: Chemical studies of rainfall and soil analysis
[NASA-CR-163122] p0016 N81-11627
SOILS
NT LUNAR SOIL
SOLAR ACTIVITY
NT SOLAR FLARES
SOLAR ACTIVITY EFFECTS
Heliobiological research - Present status and
prospects
p0063 A81-19678
Geomagnetic-biological correlations - Some new
results
p0084 A81-24154
Solar rotation and activity in the past and their
possible influence upon the evolution of life

Effect of space flight factors on the prophase in microspores of Tradescantia paludosa
p0046 A81-17117
Effect of weightlessness on sympathetic-adrenomedullary activity of rats during space flight on the biosatellites 'COSMOS'
[IAF PAPER 80-C-120] p0049 A81-18290
The objectives of space medicine and biology
p0050 A81-19341
Intestinal microecology under extreme conditions
p0085 A81-24548
Potential effects of zero gravity /space flight/ on oncogenesis
p0132 A81-33848
USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 5, 1980
[JPRS-76727] p0011 N81-10663
Problems and prospects of space pharmacology
p0011 N81-10665
Antibodies to myofibril antigens in cosmonauts after spaceflights
[NASA-TM-76300] p0073 N81-16722
Preliminary results of scientific research on biosatellite Kosmos-1129
[NASA-TM-76287] p0110 N81-20700
**SPACE FLIGHT FEEDING**
Cosmonaut feeding
p0082 A81-23503
Principles of the creation of the feeding elements of spacecraft life support systems
p0085 A81-24551
A closed ecosystem for space colonies
p0199 A81-44037
Nutrition during long flight
[NASA-TM-76436] p0095 N81-18657
Conformity with human requirements of protein contained in the rations for crews of the Salyut-6 orbital station
p0117 N81-21739
State of peripheral blood as related to altered diet and stress --- space flight feeding
p0118 N81-21746
**SPACE FLIGHT STRESS**
Effect of weightlessness and centrifugation on red cell survival in rats subjected to space flight
p0005 A81-12232
The Sled programme --- spacelab human weightlessness study
p0024 A81-14100
A 175-day space flight - Some results of medical studies
p0025 A81-14124
Man in the state of low gravity - Physiological problems, clinical aspects, and measures for prevention and protection
p0044 A81-16900
The influence of weightlessness on skeletal muscles and neuro-muscular plates
[IAF PAPER 80-C-119] p0049 A81-18289
The Shuttle and its importance to space medicine
[IAF PAPER 80-C-126] p0049 A81-18292
Cardiovascular and biochemical response to simulated space flight entry
p0070 A81-22107

In vivo bone strain measurements - Clinical
results, animal experiments, and a proposal for
a study of bone demineralization in weightlessness
p0081 A81-23393

The physiological behavior of man in space
p0082 A81-23502

Change in the biomechanical properties in the bone
of rats as a result of a 19-day space flight in
the Kosmos-936 satellite
p0104 A81-28116

Effects of prolonged exposure to space flight
factors for 175 days on lettuce seeds
p0162 A81-40366

Biological investigations aboard the biosatellite
Cosmos-1129
p0163 A81-40367

Space flight effects on Paramecium tetraurelia
flown aboard Salyut 6 in the Cytos I and Cytos M
experiments
p0163 A81-40368

Growth and development of cultured carrot cells
and embryos under spaceflight conditions
p0163 A81-40371

On different sensitivities of microorganisms tc
lowered gravitation
p0164 A81-40377

Activity of the sympathetic-adrenomedullary system
in rats after space flight on the Cosmos
biosatellites
p0164 A81-40379

The effects of space flight on some rat liver
enzymes regulating carbohydrate and lipid
metabolism
p0165 A81-40381

The effects of dynamic space flight factors on
animals --- Russian book
p0177 A81-41724

Relative efficacy of the proposed Space Shuttle
antimotion sickness medications
[IAF PAPER 81-177] p0218 A81-47391

Metabolic changes in the animals subjected to
flight in the biosatellites 'Cosmos'
[IAF PAPER 81-179] p0218 A81-47393

Biorhythmological status as one of the criteria
for cosmonaut screening
p0011 N81-10666

Circulatory reactions of first crew of the
Salyut-6 orbital test with LBNP
p0011 N81-10668

Dynamics of diastolic phase structure during a 140
day space flight
p0011 N81-10669

Results of inflight electrocardiographic studies
of Salyut-5 crew
p0012 N81-10670

Effect of some factors that simulate space flights
on blood plasma levels of free and protein-bound
11-hydroxycorticosteroids
p0012 N81-10672

An integrative approach to space-flight physiology
using systems analysis and mathematical simulation
p0053 N81-14151

Mechanisms for vestibular disorders in space
flight. Facts and hypotheses
[NASA-TM-76469] p0060 N81-15685

Preliminary report: Biomedical considerations for
future manned space flights
[NASA-CR-152383] p0092 N81-18634

Rheography in weightlessness
[NASA-TM-76439] p0092 N81-18638

Results of the study of the vestibular apparatus
and the functions of the perception of space in
cosmonauts (pre- and post-flight observations)
[NASA-TM-76485] p0092 N81-18639

Preliminary report on small group factors in long
duration space flights: Review and directions
for future research
[NASA-CR-152385] p0094 N81-18650

Performance considerations in long-term spaceflight
[NASA-CR-152384] p0095 N81-18651

Preliminary report on social psychological factors
in long duration space flights: Review and
directions for future research
[NASA-CR-152382] p0095 N81-18653

Activity of certain enzymes in subcellular
fractions of rat liver after flight on Cosmos
1129 biosatellite
[NASA-TM-76472] p0110 N81-20701

Results of vectorcardiographic examinations during
and after long term space flights aboard the
Salyut-6-Soyuz orbital complex
p0116 N81-21738

State of cosmonauts' adrenohypophyseal system
following orbital flights of different duration
p0117 N81-21740

Effects of space flights on lymphocyte blast
transformation in cosmonauts' peripheral blood
p0117 N81-21741

State of peripheral blood as related to altered
diet and stress --- space flight feeding
p0118 N81-21746

Effect of space flight factors on ultrastructure
of skeletal muscles
p0119 N81-21754

Assessment of zero gravity effects on space worker
health and safety
[NASA-TM-82330] p0135 N81-22693

Changes in hemoglobin mass during real and
simulated space flights
p0183 N81-28702

Theoretical left ventricular ejection period in
weightlessness
p0183 N81-28703

USSR Report: Space Biology and Aerospace
Medicine, volume 15, no. 2, March - April 1981
[JPRS-78028] p0186 N81-28722

Prevention of psychoemotional disturbances during
long-term space flights by means of
psychological support
p0186 N81-28726

Fitness of human visión with exposure to very
bright light
p0186 N81-28729

Cosmonautics and development of aviation medicine
p0187 N81-28734

Circadian biorhythms and flight planning
p0187 N81-28735

Vestibular selection criteria development ---
assessing susceptability to motion sickness
during orbital space flight
[NASA-CR-161044] p0189 N81-28748

Status of cosmonaut bifidoflora before and after
space flights
p0191 N81-29738

Results of studies of hemodynamics and phase
structure of the cardiac cycle during functional
test with graded exercise during 140-day flight
aboard the Salyut-6 station
p0191 N81-29739

Structural changes in the soleus muscle of rats
flown aboard the cosmos series of biosatellites
and submitted to hypokinesia
p0192 N81-29745

Ultrastructure of the rat's small intestinal
mucosa after flight aboard the Cosmos-936
biosatellite
p0192 N81-29746

Catecholamines and enzymes of their metabolism in
the rate myocardium following a long-term space
flight
p0192 N81-29747

Dystrophic changes and functional impairment of
deafferentiated bone marrow
p0193 N81-29755

Effects of the Cosmos 1129 Soviet paste diet on
body composition in the growing rat

The pharmacological analysis of the stress mechanism and its consequences --- Russian book
p0223 A81-49474
Measures of Navy pilot workload, sleep and performance in stressful environments
[AD-A087131] p0014 N81-10690
The recording and preliminary analysis of a data base for the assessment of strain in air traffic controllers, using speech
[RAE-TM-FS-334] p0033 N81-12737
Histamine and serotonin levels in man in the presence of nervous-emotional stress
p0183 N81-28705

STRESS CONCENTRATION
A viscoelastic finite element model of the human intervertebral joint
[AD-A094774] p0099 N81-19764

STRESS DISTRIBUTION
U STRESS CONCENTRATION

STRESS MEASUREMENT
In vivo bone strain measurements - Clinical results, animal experiments, and a proposal for a study of bone demineralization in weightlessness
p0081 A81-23393

STRESS-STRAIN DISTRIBUTION
U STRESS CONCENTRATION

STRESSES
NT THERMAL STRESSES
NT VIBRATIONAL STRESS
Response of the cardiovascular system to vibration and combined stresses
[AD-A094792] p0154 N81-25676

STRETCHING
Analysis of stretch responses of a myocybernetic model muscle fibre
[CSIR-TWISK-167] p0152 N81-25664

STRUCTURAL DESIGN
Design, construction and testing of a dc bioeffects test enclosure for small animals --- simulating the environment of high voltage dc transmission lines
[DOE/RA-10157/1] p0110 N81-20702

STRUCTURAL DESIGN CRITERIA
Human engineering design criteria for modern control/display components and standard parts
[AD-A091191] p0037 N81-13637

STRUCTURAL RIGIDITY
U STRUCTURAL STABILITY

STRUCTURAL STABILITY
Control of a flexible robot arm
[NASA-CR-164167] p0121 N81-21772

STRUCTURAL VIBRATION
NT FLUTTER
NT TORSIONAL VIBRATION

STS-3

SYMPATHETIC NERVOUS SYSTEM
Effect of weightlessness on sympathetic-adrenomedullary activity of rats during space flight on the biosatellites 'COSMOS' [IAF PAPER 80-C-120] p0049 A81-10290
Autonomic responses of high-altitude natives during sojourn at plains and on return to altitude p0145 A81-37288
Reduced norepinephrine response to dynamic exercise in human subjects during O2 breathing p0178 A81-41790
Norepinephrine turnover in lung - Effect of cold pressure and chronic hypoxia p0221 A81-48074
Effect of ionized air environment on human hormonal systems p0185 N81-28718
Mechanism of adrenosympathetic system reaction to single exposure to variable magnetic field p0235 N81-33788

SYMPATHOMIMETICS
U ADRENERGICS

SYMPTOMOLOGY
The negative effect of hypokinesia involving injury and preventive measures [NASA-TM-76562] p0171 N81-27787
Quantitative evaluation of clinical manifestations of motion sickness p0193 N81-29757

SYMPTOMS
U SIGNS AND SYMPTOMS

SYNAPSES
Antihistamine effect on synaptosomal uptake of serotonin, norepinephrine and dopamine p0086 A81-24963
The neuronal pool as a function unit in the Central Nervous System (CNS) [TRITA-NA-8009] p0231 N81-32859

SYNCHROTRON RADIATION
Synchrotron radiation sources for photobiology and ultraviolet, visible and infrared spectroscopy [BNL-28149] p0031 N81-12722

SYNCOPE
NT BLACKOUT PREVENTION

SYNDROMES
U SIGNS AND SYMPTOMS

SYNTAX
NT WORDS (LANGUAGE)

SYNTHESIS (CHEMISTRY)
Quantification of monocarboxylic acids from a spark discharge synthesis --- in meteorites p0132 A81-33798
Oligoadenylates formation on an oligouridylate template in the presence of a lead catalyst p0132 A81-33799
Synthesis, characterization and reactivity of electron rich transition metal organometallic complexes p0035 N81-13621

SYNTHETIC APERTURE RADAR
Carbon dioxide effects research and assessment program. Measurement of Changes in Terrestrial Carbon Using Remote Sensing [CONF-7905176] p0057 N81-15664

SYNTHETIC FIBERS
NT GLASS FIBERS
NT NYLON (TRADEMARK)

SYNTHETIC FUELS
Health effects of synfuels technology: A review [ANL/ES-111] p0172 N81-27789

SYNTHETIC RESINS
NT EPOXY RESINS
NT NYLON (TRADEMARK)

SYRINGES
Micro-fluid exchange coupling apparatus [NASA-CASE-ARC-11114-1] p0053 N81-14605

SYSTEM EFFECTIVENESS
Controller evaluation of a touch input air traffic data system - An 'indelicate' experiment p0021 A81-13418
Effectiveness and wearability of immersion hypothermia protection equipment p0070 A81-22386
Assessing the effectiveness of auditory warnings p0209 N81-31457

SYSTEM FAILURES
Pilot reaction to attitude gyro failure - A flight experiment p0105 A81-29143
Simulation of the pilot's long term strategy during IFR flights [ONERA, TP NO. 1981-43] p0159 A81-39246

SYSTEMS ANALYSIS
Systems analysis of behavioral mechanisms --- Russian book p0087 A81-25572
Requirements definition and design guidelines for the man-machine interface p0107 A81-30232
Systems analysis of thermoregulation mechanisms in the human organism p0123 A81-30738
Microprocessor-based real time system for eye motion analysis p0125 A81-31522
An integrative approach to space-flight physiology using systems analysis and mathematical simulation p0053 N81-14151

SYSTEMS DESIGN
U SYSTEMS ENGINEERING
SYSTEMS ENGINEERING
NT COMPUTER SYSTEMS DESIGN
The design of industrial robots --- Russian book
p0019 A81-13063
Accessible region and synthesis of robot arms
[ASME PAPER 80-DET-101] p0050 A81-18652
Ergatic system for the control of the joint motion of dynamic plants
p0180 A81-42602
Systems engineering models of human-machine interaction --- Book
p0223 A81-49885
Definition of problems of persons in sheltered care environments
[NASA-CR-160050] p0031 N81-12725
Human engineering design criteria for modern control/display components and standard parts
[AD-A091191] p0037 N81-13637
Operation and maintenance manual for a preprototype Sabatier carbon dioxide reduction subsystem
[NASA-CR-160918] p0096 N81-18661
Development of a preprototype Sabatier CO2 reduction subsystem
[NASA-CR-160919] p0096 N81-18662
The application of additive factors methodology to workload assessment in a dynamic system monitoring task
[AD-A094314] p0096 N81-18665
Workshop on Interactive Man-Machine Discourse
[AD-A096512] p0136 N81-22702
System for sterilizing objects --- cleaning space vehicle systems
[NASA-CASE-KSC-11085-1] p0149 N81-24724
SYSTEMS MANAGEMENT
Automation in organizations: Eternal conflict
[NASA-TM-81290] p0150 N81-24725
SYSTEMS SIMULATION
Some human factors aspects of computer-aiding concepts for air traffic controllers
p0021 A81-13417
Evaluation of the reliability of a solution from results of ergatic-system simulation
p0180 A81-42601
Systems engineering models of human-machine interaction --- Book
p0223 A81-49885
Man-machine simulations in industrial systems. Volume 1: Narrative
[DE81-027882] p0232 N81-32868
SYSTEMS STABILITY
Control of the horizontal motion of a walking machine in the case of incomplete information
p0157 A81-38317
SYSTOLE
Noninvasive aortic bloodflow by Pulsed Doppler Echocardiography (PDE) compared to cardiac output by the direct Fick procedure
p0111 N81-20709
The application of cardiograms in the valuation of navigation personnel
p0211 N81-31830
SYSTOLIC PRESSURE
An automated indirect blood pressure instrument based upon ultrasound
p0014 N81-10689
The application of cardiograms in the valuation of navigation personnel
p0211 N81-31830

T

TACHISTOSCOPES
Latency of the perceived offset of brief target gratings --- visual perception and spatial resolution
p0203 A81-46198
TACHYCARDIA
The Wolff-Parkinson-White pattern in healthy aircrew --- heart disease diagnostics
p0206 A81-47109
TACTILE DISCRIMINATION
Touch-sensing technology - A review
[SME PAPER MS80-03,] p0200 A81-44651
TACTILE SENSATION
U TOUCH
TAILORING
U DESIGN
TALKING
NT WORDS (LANGUAGE)
The instruction of student pilots in breathing and speaking at excess oxygen pressures
p0200 A81-44475
TARE (DATA REDUCTION)
U DATA REDUCTION
TARGET ACQUISITION
Motor performance in relation to control-display gain and target width
p0007 A81-12256
Quantifying an internal model of target motion in a manual tracking task
p0046 A81-17161
The effect of expectations on slow oculomotor control. III - Guessing unpredictable target displacements
p0072 A81-23097
Displacement detection in human vision
p0072 A81-23098
Direction-specific and position-specific effects upon detection of displacements during saccadic eye movements
p0072 A81-23099
A study on pilot/observer interaction in aligning a helicopter with a target
[ESA-TT-480] p0016 N81-10703
Dynamic target acquisiton: Empirical models of operator performance
[AD-A092263] p0075 N81-16733
Teamwork in target Acquisition
p0115 N81-20808
An experimental determination of the effect of image quality on eye movement and search for static and dynamic targets
[AD-A077728] p0148 N81-24718
TARGET RECOGNITION
Predicting search performance for multiple targets --- in human operator visual tasks
p0066 A81-20917
Detection of noisy visual targets - Models for the effects of spatial uncertainty and signal-to-noise ratio
p0181 A81-42627
Development of a search task for the measurement of peripheral visual acuity
p0222 A81-48499
The influence of figural complexity on the detection, recognition, and identification of targets, in computer generated displays
[AD-A089945] p0017 N81-11635
Visual detection model for structured targets (Penval Program)
[AD-A096084] p0120 N81-21766
Influence of the flight altitude and limitation of the field of view on the visibility of targets on the ground and the maximum visibility flight altitude
[ESA-TT-654] p0121 N81-21768
Enhancing sensitivity to visual motion
[AD-A094793] p0155 N81-25679
Proposed new vision standards for the 1980's and beyond: Contrast sensitivity
p0168 N81-26708
TASK COMPLEXITY
Manipulation and measurement of concurrent-task performances
p0028 A81-15688
The visual accommodation response during concurrent mental activity
p0051 A81-19572
Human controller modeling in environments that include non-control tasks
p0066 A81-20501
Task segmentation - An approach to simulator task fidelity
p0068 A81-21728
Time on task effect on tracking performance under heat stress
p0125 A81-31289
Multiple resources, task-hemispheric integrity, and individual differences in time-sharing
p0130 A81-32174
Effects of system display format on performance in a fault location task
p0130 A81-33147

Modeling the human controller in environments that include continuous and discrete tasks
p0203 A81-46453
Effects of criteria on flight simulation. Study 2: Multiple criteria
[AD-A097526] p0138 N81-23794
Human Resources, logistics and cost factors in weapon system development Demonstration in the full scale development phase of aircraft system acquisition
[AD-A096731] p0155 N81-25682
Individual differences in dual-task performance
[AD-A099977] p0175 N81-27811

THALLIUM
NT THALLIUM ISOTOPES
THALLIUM ISOTOPES
Detection of coronary artery disease in asymptomatic aircrew members with thallium-201 scintigraphy
p0023 A81-13511
Two dimensional echocardiographic evaluation of exercise-induced left and right ventricular asynergy - Correlation with thallium scanning
p0223 A81-49328
Detection of coronary artery disease in asymptomatic aircrew members with thallium-201 scintigraphy
p0169 N81-26713
THERAPY
NT CHEMOTHERAPY
NT RADIATION THERAPY
Premature ventricular complexes - Therapeutic dilemmas and decisions
p0064 A81-19719
Assessment of oxygen and carbogen therapy effect in Meniere's disease according to clinical and electroencephalographic data
[NASA-TM-76348] p0059 N81-15677
THERMAL COMFORT
Physiological responses of men and women to prolonged dry heat exposure
p0005 A81-12231
The relative characteristics of continuous and intermittent adaptation to high temperatures
p0200 A81-44891
The regulation of cardiovascular system activity during transient thermal stress
p0201 A81-44893
THERMAL DECOMPOSITION
NT PYROLYSIS
Generation of constant concentrations of thermal decomposition products in inhalation chambers - A comparative study with a method according to DIN 53 436. I - Measurement of carbon monoxide and carbon dioxide in inhalation chambers
p0039 A81-16599
Generation of constant concentrations of thermal decomposition products in inhalation chambers - A comparative study with a method according to DIN 53 436. II - Measurement of concentrations of total volatile organic substances in inhalation chambers
p0039 A81-16600
The toxicity of gases from the thermal decomposition of combustible materials. A test chamber prototype
p0173 N81-27799
THERMAL DEGRADATION
Relative toxicity testing of spacecraft materials. 1: Spacecraft materials --- lethality of pyrolysates
[NASA-CR-160908] p0075 N81-16731
A laboratory model for the evaluation of the toxicity of combustion products
p0174 N81-27805
THERMAL EFFECTS
U TEMPERATURE EFFECTS
THERMAL EMISSION
Skin temperature gradients and heat emission at various ambient temperatures
p0129 A81-32153
THERMAL INSULATION
Further study for fabrication, evaluation, and testing of monolayer woven materials for space suit insulation
[NASA-CR-166140] p0076 N81-16740
Thermal comfort in an era of energy shortage
[AD-A093193] p0078 N81-17696
Thermal comfort characteristics of textile apparel fabrics
p0135 N81-22699
Study for fabrication, evaluation, and testing of monolayer woven type materials for space suit insulation
[NASA-CR-166139] p0136 N81-22700
THERMAL PROTECTION
Physiological responses of human subjects wearing thermal protective clothing assemblies in varying environments
p0070 A81-22085
THERMAL STRESSES
Data acquistion system for thermal stress studies --- cutaneous heat flow and temperature monitors for individual human body sites
[ASME PAPER 80-WA/OCE-14] p0067 A81-21125
Heat stress in front and rear cockpits of F-4 aircraft
p0142 A81-34302
THERMOCOUPLES
Method for attaching cerebral thermocouple wires to the dog's skull
p0237 N81-33800
THERMODYNAMIC PROPERTIES
NT ENTROPY
THERMOGRAMS
U RECORDING INSTRUMENTS
THERMORECEPTORS
Skin temperature gradients and heat emission at various ambient temperatures
p0129 A81-32153
Is the central control of temperature stability the paradigm of homeostasis /Discussion of theories and evidence/
p0199 A81-44175
THERMOREGULATION
Effects of gravitational profiles on the rat's thermoregulatory response to cold
p0002 A81-10621
A contribution to the topography of temperature regulation in man
p0003 A81-11197
The effect of pharmacological destruction of hypothalamic monoaminoenergic structures on body

temperature and gaseous exchange at acute cooling of the organism
p0005 A81-11776
Cost of locomotion and heat balance during rest and running from 0 to 55 C in a patas monkey
p0024 A81-13919
Thermal effects of injecting norepinephrine into hypothalamus of the rat during rest and exercise
p0042 A81-16670
The effects of high altitude on the thermoregulatory system
p0046 A81-17199
The role of thyroid hormones in thermoregulatory reactions during altitude adaptation
p0103 A81-27574
Systems analysis of thermoregulation mechanisms in the human organism
p0123 A81-30738
Effect of dehydration on thermoregulation in cats exposed to high ambient temperatures
p0178 A81-41787
Is the central control of temperature stability the paradigm of homeostasis /Discussion of theories and evidence/
p0199 A81-44175
The evolutionary development of vertebrate thermoregulation
p0221 A81-48119
Evaluation of thermal strain index for assessment of tolerance to heat stress
p0225 A81-49959
Role of a decrease in body heat content in the thermoregulatory reaction of the concha auriculae vessels
[NASA-TM-76370] p0113 N81-20717
Thermoregulatory and arterial baroreflex control of heart rate in the heat-stressed baboon
p0147 N81-24707
Procedures for evaluating nonperturbing temperature probes in microwave fields
[PB81-205882] p0239 N81-33013

THERMOSETTING RESINS
NT EPOXY RESINS
NT NYLON (TRADEMARK)

THERMOTROPISM
U TEMPERATURE EFFECTS

THIAMINE
Use of nospazus in combination with certain vitamins against seasickness
p0194 N81-29760

THIGH
Changes in pressure within thigh and foot vessels during postural activity
p0123 A81-30739

THREE DIMENSIONAL MOTION
Motion simulation of an articulated robotic arm subjected to static forces
[ASME PAPER 80-DET-102] p0050 A81-18653
The basic motion regulation system for a quadruped walking vehicle
[ASME PAPER 80-DET-34] p0050 A81-18656

THRESHOLDS (PERCEPTION)
Hyperacuity in the detection of absolute and differential displacements of random dot patterns
p0025 A81-14744
Displacement detection in human vision
p0072 A81-23098
A local mechanism for differential velocity detection
p0104 A81-28248
Training of pattern recognition by central and peripheral vision
p0124 A81-30743
Sensation of rotation about a vertical axis with a fixed visual field in different illuminations and in the dark
p0141 A81-34000
What is the diplopia threshold
p0144 A81-37251
Perception, comfort and performance criteria for human beings exposed to whole body pure yaw vibration and vibration containing yaw and translational components
p0161 A81-39916
Some further thoughts on temporary threshold shift --- hearing and intermittent noise
[SAB-TR-FS-338] p0032 N81-12734
Role of the middle ear muscle apparatus in mechanisms of speech signal discrimination
[NASA-TM-76408] p0036 N81-13628
Tables relating pure-tone audiometric threshold to age
[NPL-AC-94] p0055 N81-14616
A literature study on visual motion accuity (minimum perceptible movement)
[DFVLR-MITT-80-06] p0055 N81-14618
On the practice of measuring sensory thresholds: Signal detection and the adaptive method
[FB-43] p0079 N81-17710
Biological effects of short, high-level exposure to gases: Sulfur dioxide
[AD-A094504] p0094 N81-18647
Enhancing sensitivity to visual motion
[AD-A094793] p0155 N81-25679
A solid-state dark adaptometer: The LAIR dark adaptometer
p0168 N81-26706
Screening for noise induced hearing loss in Norwegian Air Force
p0168 N81-26707
Proposed new vision standards for the 1980's and beyond: Contrast sensitivity
p0168 N81-26708
Thresholds for the visual perception of position deviations and motion
[NLR-TR-73025-U] p0172 N81-27790
Hearing standards for aircrew
p0209 N81-31461

THYMUS GLAND
Changes of deoxyribonucleoprotein in the spleen, thymus and liver of rats exposed to weightlessness and artificial gravity aboard the Cosmos biosatellites
p0165 A81-40383
Comparison of early reactions of the blood system in rats to immobilization, the action of hypoxia and the administration of erythopoietin
[NASA-TM-76169] p0110 N81-20699

THYROID GLAND
The role of thyroid hormones in thermoregulatory reactions during altitude adaptation
p0103 A81-27574
Radiation protection: An analysis of thyroid blocking
[SAND-80-2140C] p0036 N81-13631
Thyroid function at high altitude in the monkey, Macacanemestrina
p0056 N81-15657
Effect of stationary magnetic field on the thyroid
p0235 N81-33787

TIBIA
Determination of in vivo mechanical properties of long bones from their impedance response curves
[NASA-CR-164441] p0153 N81-25666
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3A: Trabecular spacing and orientation in the long bones
p0228 N81-32835

TILT
U ATTITUDE (INCLINATION)

TILTING
U ATTITUDE (INCLINATION)

TIMBER INVENTORY
Carbon dioxide effects research and assessment program. Measurement of Changes in Terrestrial Carbon Using Remote Sensing
[CONF-7905176] p0057 N81-15664

TIME
NT REACTION TIME

TIME DEPENDENCE
Time dependency of whole-body vibration discomfort
p0019 A81-13214
Residence time and carbon dioxide scrubbing efficiency in life support systems
p0081 A81-23394

TIME RESPONSE
A comparison between saccades and quick phases of vestibular nystagmus in the cat
p0021 A81-13241
Oblique saccades of the cat - A comparison between the durations of horizontal and vertical components
p0021 A81-13242
Spatial frequency response and perceived depth in the time-course of object superiority
p0130 A81-33124

TIME SHARING
  Multiple resources, task-hemispheric integrity, and individual differences in time-sharing
  p0130 A81-32174
TISSUES (BIOLOGY)
 NT EPICARDIUM
 NT EPITHELIUM
 NT PLANTAR TISSUES
  The viscoelastic properties of the tissues from a human heart aortic valve
  p0005 A81-11814
  The colony-forming capacity of bone marrow cells in a tissue culture after uniform and nonuniform radiation
  p0066 A81-20845
  The effect of elevated carbon dioxide partial pressure on oxygen consumption and glycolysis in the tissues of albino rats
  p0086 A81-24931
  Dielectric behavior of selected animal tissues in vitro at frequencies from 2 to 4 GHz
  p0125 A81-31167
  Effect of ionizing radiations on connective tissue
  [UR-3490-1900] p0032 N81-12732
  Photoreactivation in bacteria and in skin
  [BNL-28385] p0058 N81-15668
  Direct exposure of monolayers of mammalian cells to airborne pollutants in a unique culture system
  [AD-A094705] p0097 N81-19750
  Chemicals identified in human biological media, a data base
  [ORNL/EIS-163/V2-P1] p0099 N81-19763
  Theoretical and observational analysis of individual ionizing particle effects in biological tissue
  [LBL-11147] p0099 N81-19765
  The effect of immobilization and 3 (beta-aminoethyl)-1, 2, 4 triazol on the calcium content in gastric tissues of guinea pigs during the formation of experimental ulcers
  [NASA-TM-75992] p0109 N81-20691
  Multifunctional transducer
  [NASA-CASE-NPO-14329-1] p0111 N81-20703
  Hypoxia in the walls of large blood vessels
  p0111 N81-20706
  Hydrazine effects on vertebrate cells in vitro
  p0172 N81-27795
  Intertissue variation in benzo(a)pyrene metabolism by human skin, lung and liver in vitro
  p0173 N81-27798
  Enhancement of in vitro Guayule propagation
  [NASA-CASE-NPO-15213-1] p0190 N81-29728
  Dehydrogenase activity in the pentose phosphate oxidative pathway and relation thereof to lipid metabolism under hypokinetic conditions
  p0192 N81-29748
  Theoretical and observational analysis of individual ionizing particle effects in biological tissue
  [LBL-11147-REV] p0230 N81-32847
  Tissue interaction with nonionizing electromagnetic fields
  [DE81-027654] p0231 N81-32858
TOBACCO
  The effects of tobacco on aviation safety
  p0002 A81-23396
TOCOPHEROL
  The effects of hyperbaric oxygen /HBO/ on the qualitative and quantitative brain fatty acid compositions of normal and vitamin E-deficient mice
  p0043 A81-16693
  Use of nospanum in combination with certain vitamins against seasickness
  p0194 N81-29760
TOLERANCES (PHYSIOLOGY)
 NT ACCELERATION TOLERANCE
 NT ALTITUDE TOLERANCE
 NT COLD TOLERANCE
 NT HEAT TOLERANCE
 NT HUMAN TOLERANCES
 NT RADIATION TOLERANCE
  A study of low frequency vibrations transmitted across an anthropomorphic mannequin and a human subject
  p0160 A81-39677
  Detectability and annoyance of repetitive impulsive sounds
  p0204 A81-46640
  Biological effects of short, high-level exposure to gases; Carbon Monoxide
  [AD-A094503] p0098 N81-19759
  Specialized physiological studies in support of manned space flight
  [NASA-CR-160936] p0111 N81-20707
  Tolerance of Lower Body Negative Pressure (LBNP) in endurance runners, weightlifters, swimmers and nonathletes
  p0111 N81-20708
  Comparative efficacy of various biologically active compounds during exercise
  p0104 N81-20709
  [illegible]tness of human vision with exposure to very bright light
  p0106 N81-28729
TOMOGRAPHY
  A bandpass filter for the enhancement of an X-ray reconstruction of the tissue in the spinal canal
  p0039 A81-16625
  Evaluation of ischemic heart disease with a prototype volume imaging computed tomographic /CT/ scanner - Preliminary experiments
  p0042 A81-16665
  Regional myocardial blood flow, metabolism and function assessed noninvasively with positron emission tomography
  p0042 A81-16666
  A new CT collimator for producing two simultaneous overlapping slices from one scan --- for biomedical applications
  p0220 A81-47675
  Computerized tomographic determination of spinal bone mineral content
  [NASA-CR-160891] p0054 N81-14615
  Semiconductor detectors for medical tomography with high-energy heavy ions
  [LBL-11037] p0137 N81-23790
TONOMETRY
 U PRESSURE MEASUREMENTS
TONUS
 U MUSCULAR TONUS
TOOLS
 NT MACHINE TOOLS
 NT SPACE TOOLS
TORQUE
  Estimation of myodynamic parameter values from observations on isometrically contracting muscle groups
  [CSIR-TWISK-153] p0152 N81-25663
TORSION
  Identification of the human lower extremity in torsion
  p0058 N81-15670
TORSIONAL VIBRATION
  Perception, comfort and performance criteria for human beings exposed to whole body pure yaw vibration and vibration containing yaw and translational components
  p0161 A81-39916
TORSO
  Effects of geometrical uncertainties on electrocardiography
  p0124 A81-30925
TOUCH
 NT TACTILE DISCRIMINATION
  The sensitivity of the auditory and tactile sensory systems upon separate and simultaneous stimulation
  p0045 A81-17087
TOXIC DISEASES
 NT CARBON MONOXIDE POISONING
  Early pulmotoxic effects of oxygen on the rat alveolar type II epithelial cell
  p0142 A81-34306
  The toxic effect of insignificant oxygen excess in an artificial gas atmosphere
  p0105 N81-28715
TOXIC HAZARDS
  Modeling of exposure to carbon monoxide in fires
  p0039 A81-16598
  Generation of constant concentrations of thermal decomposition products in inhalation chambers - A comparative study with a method according to DIN 53 436. II - Measurement of concentrations of total volatile organic substances in inhalation chambers
  p0039 A81-16600

The hygiene and toxicology of nonmetallic materials
p0084 A81-24545
Development of occupational and environmental
health criteria for the F-16
p0089 A81-26768
Industrial hygiene and the F-16 air combat fighter
p0089 A81-26769
Initial tests of the combined ECG/TI animal
systems using carbon monoxide exposure
p0200 A81-44859
On the mechanisms of harmful effects of certain
medicinal preparations on the auditory organ and
methods for their prevention
[NASA-TM-76425] p0059 N81-15670
Relative toxicity testing of spacecraft materials.
2: Aircraft materials
[NASA-CR-160907] p0075 N81-16732
Environmental contaminants in food. Volume 2,
part B: Working papers
[PB-116774] p0080 N81-17716
The action of botulinum toxin at the neuromuscular
junction
[AD-A094643] p0099 N81-19761
Health effects of synfuels technology: A review
[ANL/ES-111] p0172 N81-27789
Toxic Hazards in Aviation
[AGARD-CP-309] p0172 N81-27791
Evaluation of the CNS and cardiovascular effects
of prolonged exposure to bromotrifluromethane
(CBrF3)
[NASA-CR-161078] p0230 N81-32853
Chemical characterization and toxicologic
evaluation of airborne mixtures
[AD-A102678] p0231 N81-32855
TOXICITY
NT CARBON MONOXIDE POISONING
Generation of constant concentrations of thermal
decomposition products in inhalation chambers -
A comparative study with a method according to
DIN 53 436. I - Measurement of carbon monoxide
and carbon dioxide in inhalation chambers
p0039 A81-16599
Investigation of the biological effect of lunar
soil as a result of its intratracheal introduction
p0046 A81-17116
Acute and chronic propylene glycol dinitrate
exposure in the monkey
p0145 A81-37287
Comparison of survival times under rising and
fixed temperature conditions
p0200 A81-44656
Experimental intoxications by PVC thermal
degradation products - Study of the respiratory
tract lesions
p0200 A81-44857
Pharmacological activity and toxicity of some
neurotropic agents under conditions of
experimental hypodynamia
[NASA-TM-76371] p0074 N81-16724
Relative toxicity testing of spacecraft materials.
1: Spacecraft materials --- lethality of
pyrolysates
[NASA-CR-160908] p0075 N81-16731
Chronic toxicity of lead and cadmium. 1: Changes
in the central nervous system of the parental
generation of rats after chronic intoxication
with lead and cadmium
[PB81-110850] p0091 N81-18630
Biological effects of short, high-level exposure
to gases: Nitrogen Oxides
[AD-A094502] p0093 N81-18645
Biological effects of short, high-level exposure
to gases: Ammonia, carbon monoxide, sulfur
dioxide, and nitrogen oxides
[AD-A094505] p0094 N81-18646
Biological effects of short, high-level exposure
to gases: Sulfur dioxide
[AD-A094504] p0094 N81-18647
Biological effects of short, high-level exposure
to gases; Carbon Monoxide
[AD-A094503] p0098 N81-19759
Scientific rationale for the selection of toxicity
testing methods: Human health assessment
[ORNL/EIS-151] p0120 N81-21762
Proceedings of the Workshop on Subchronic Toxicity
Testing
[ORNL/EIS-189] p0120 N81-21763
Toxic hazards research unit
[AD-A091617] p0149 N81-24719
Dietary protection against pulmonary oxygen
poisoning
[AD-A097750] p0150 N81-24727
The toxicity of grade JP-5 aviation turbine fuel,
a comparison between petroleum and shale-derived
fuels
p0172 N81-27793
Differential effects of hydrazine compounds on B-
and T-cell immune function
p0172 N81-27794
Inhibition of virus transformation by high energy
fuels as a correlate of carinogenic potential
p0173 N81-27797
The toxicity of gases from the thermal
decomposition of combustible materials. A test
chamber prototype
p0173 N81-27799
The influence of altitude on the toxicity of
carbon oxides
p0173 N81-27801
A laboratory model for the evaluation of the
toxicity of combustion products
p0174 N81-27805
The teratogenic effects of the fuel JP-10 on the
ICR mice
[AD-A101062] p0190 N81-29730
Toxicological and hygienic studies of water
recycled from oxidant-containing fluids
p0193 N81-29751
Chronic dermal toxicity of epoxy resins. 1: Skin
carcinogenic potency and general toxicity
[ORNL-5762] p0196 N81-29776
Molecular mechanisms of the epithelial transport
of toxic metal ions, particularly mercury,
cadmium, lead, arsenic, zinc and copper
[DE81-029091] p0230 N81-32851
TOXICITY AND SAFETY HAZARD
Is it dangerous to handle glass fibers - The
physiological action of artificial mineral fibers
p0004 A81-11440
On-board feeding - Its goals, its risks and their
prevention
p0082 A81-23501
Health effects of synfuels technology: A review
[ANL/ES-111] p0172 N81-27789
Ramjet fuel toxicology
p0172 N81-27792
TOXICOLOGY
Toxicology and metabolism of nickel compounds
[DOE/EV-03140/5] p0036 N81-13629
Deposition and clearance of inhaled aerosols
[UCD-472-503] p0036 N81-13630
Toxicology and metabolism of nickel compounds:
Comprehensive report of overall activities
during the three-year period from 1 December
1977 - 30 November 1980
[DOE/EV-03140/5-T1] p0078 N81-17697
Behavior as a common focus of toxicology and
nutrition
[UR-3490-1826] p0121 N81-21774
Low-Btu-gasifier emissions toxicology
[LMF-77] p0149 N81-24723
Toxic Hazards in Aviation
[AGARD-CP-309] p0172 N81-27791
Ramjet fuel toxicology
p0172 N81-27792
Health Effects of Diesel Engine Emissions:
Proceedings of an international symposium held
at Cincinnati, Ohio on December 3-5, 1979,
volume 1
[PB81-173809] p0196 N81-29777
Health Effects of Diesel Engine Emissions:
Proceedings of an international symposium
[PB81-173817] p0196 N81-29778
Toxicology and metabolism of nickel compounds
[DE81-028924] p0230 N81-32850
Literature sources in toxicology: A survey
[BLL-BLRDR-5542] p0239 N81-33814
TRACE CONTAMINANTS
Method for concentrating trace impurities from the
atmosphere of isolated chambers by means of
cooled traps
p0187 N81-28737
TRACE ELEMENTS
Concentration of selected trace metals by marine
phytoplankton
p0170 N81-27775
TRACKING (POSITION)
NT COMPENSATORY TRACKING

NT OPTICAL TRACKING

The toxicity of grade JP-5 aviation turbine fuel, a comparison between petroleum and shale-derived fuels p0172 N81-27793
VARIABILITY
Changes of psychometric coefficients and factor structure as a function of test practice [DFVLR-FB-80-15] p0055 N81-14622
VARIANCE (STATISTICS)
NT COVARIANCE
NT REGRESSION ANALYSIS
Variations in response to whole-body vibration - Intensity dependent effects p0222 A81-40500
VARIATIONS
NT ANNUAL VARIATIONS
NT PERIODIC VARIATIONS
Analysis of heart rate variability as an estimate of pilot workload in human engineering research [ESA-TT-653] p0120 N81-21764
VASCULAR SYSTEM
NT AORTA
NT ARTERIES
NT BLOOD VESSELS
Regional hemodynamic shifts and the condition of vasomotor regulation during 182 days of antiorthostatic hypokinesia p0001 A81-10123
Renal responses to central vascular expansion are suppressed at night in conscious primates p0003 A81-10775
The role of plasma proteins in the maintenance of vascular volumes p0014 N81-10687
Rheoencephalography in Meniere's disease [NASA-TM-76387] p0076 N81-16727

The control of brain blood flow during various blood oxygen levels
p0167 N81-26693

VASOCONSTRICTION
Vasodilator and constrictor responses to hypoxia in isolated pig lungs
p0024 A81-13921
Stability of alveolar hypoxic vasoconstriction with intermittent hypoxia
p0024 A81-13922
Role of a decrease in body heat content in the thermoregulatory reaction of the concha auriculae vessels
[NASA-TM-76370] p0113 N81-20717

VASOCONSTRICTOR DRUGS
NT SEROTONIN

VASODILATION
Vasodilator and constrictor responses to hypoxia in isolated pig lungs
p0024 A81-13921

VASOMOTOR NERVOUS SYSTEM
U NERVOUS SYSTEM

VECTOR CONTROL
U DIRECTIONAL CONTROL

VECTORCARDIOGRAPHY
Vectorcardiographic changes in hypoxic environment
p0020 A81-13226
Results of vectorcardiographic examinations during and after long term space flights aboard the Salyut-6-Soyuz orbital complex
p0116 N81-21730
Changes in bioelectrical activity of the myocardium of flight personnel under the influence of their work load
p0194 N81-29762

VEGETABLES
Effects of prolonged exposure to space flight factors for 175 days on lettuce seeds
p0162 A81-40366
Growth and development of cultured carrot cells and embryos under spaceflight conditions
p0163 A81-40371

VEGETATION GROWTH
Gravity as an obligatory factor in normal higher plant growth and development
p0163 A81-40370
Optical and electron-microscopic studies of the Funaria hygrometrica protonema after cultivation for 96 days in space
p0164 A81-40375
Preliminary results of in vitro propagation of Guayule
p0179 A81-42134
Experimental estimation of the functional possibilities of higher plants as medium regenerators in life support systems
[IAF PAPER 81-169] p0218 A81-47387
Life of the onion not knowing up from down
[NASA-TM-76353] p0073 N81-16718
Enhancement of in vitro Guayule propagation
[NASA-CASE-NPO-15213-1] p0190 N81-29728

VELOCITY
NT ANGULAR VELOCITY
NT HIGH SPEED

VELOCITY DISTRIBUTION
Velocity after-effects - The effects of adaptation to moving stimuli on the perception of subsequently seen moving stimuli
p0008 A81-25891

VELOCITY FIELDS

NT MICE
NT MONKEYS
NT RABBITS
NT RATS
NT RODENTS
The evolutionary development of vertebrate thermoregulation
p0221 A81-48119
The ultrastructural basis for the photomechanical response in the photoreceptors of the vertebrate retina
p0091 N81-18631

VERTICAL MOTION
Model problem of biped walking with vertical uncomfortableness
p0177 A81-41361
Method of testing white rat elevator response
p0237 N81-33790

VERTICAL ORIENTATION
The rod-and-frame illusion in erect and supine observers
p0144 A81-37253

VERTICAL PERCEPTION
Evaluation and prediction of the vertical situation from a horizontal situation display --- pilot perception of motion and separation in cockpit display of air traffic information
p0066 A81-20503
The perception of verticality and the frame of reference of the visual tilt aftereffect
p0105 A81-28899
Characteristics of vestibulosensory reactions studied by experimental caloric test
[NASA-TM-76386] p0113 N81-20718
Effect of meprobamate on the vestibulosensory and vestibular somatic reaction
[NASA-TM-76104] p0133 N81-22683

VERTIGO
A microprocessor-controlled vestibular examination chair
p0130 A81-32950
Assessment of oxygen and carbogen therapy effect in Meniere's disease according to clinical and electroencephalographic data
[NASA-TM-76348] p0059 N81-15677
Rheoencephalography in Meniere's disease
[NASA-TM-76387] p0074 N81-16727
Dependence of vestibular reactions on frequency of action of sign-variable accelerations
[NASA-TM-76410] p0098 N81-19757

VESTIBULAR NYSTAGMUS
The dependence of nystagmus direction on cupula position and the direction of endolymph flow during sinusoidal rotation
p0001 A81-10124
A comparison between saccades and quick phases of vestibular nystagmus in the cat
p0021 A81-13247
Correlation between vestibular sensitization and leg muscle relaxation under weightlessness simulated by water immersion

[IAF PAPER 80-C-128] p0049 A81-18298
Frequency response of the vestibulo-ocular reflex /VOR/ in the monkey
p0001 A81-23389
Variations in gravitoinertial force level affect the gain of the vestibulo-ocular reflex - Implications of the etiology of space motion sickness
p0089 A81-26771
Visual-vestibular interactions - The directional component of visual background movement
p0142 A81-30386
The mechanism of otolithic nystagmus
p0165 A81-40695
Vestibular nystagmus in rats after hypokinesia and prolonged rotation
p0012 N81-10676
Dependence of vestibular reactions on frequency of action of sign-variable accelerations
[NASA-TM-76410] p0098 N81-19757
Importance of photoelectronystagmography for clinical study of the vestibular function
[NASA-TM-76404] p0112 N81-20717
Objective appraisal of tolerance to ventriculography with various radiocontrast media (according to electronystagmography data)
[NASA-TM-76340] p0113 N81-20721
Visual evaluation of nystagmus intensity in points to diagnose vestibular dysfunction
[NASA-TM-76409] p0134 N81-22686
A model of formation of nystagmic reactions to a set of caloric tests
p0187 N81-28736
The effect of noise on the vestibular system
p0208 N81-31455

VESTIBULAR TESTS
The vestibular apparatus
p0003 A81-10823
A microprocessor-controlled vestibular examination chair
p0130 A81-32950
Influence of combined visual and vestibular cues on human perception and control of horizontal rotation
p0141 A81-33999
Motion sickness and sensory illusions - Effects of rotations around horizontal axis
p0159 A81-39676
Changes in the microstructure of the vestibular apparatus of tadpoles /Rana temporaria/ developed in simulated weightlessness
p0164 A81-40378
The role of M- and N-cholinergic brain systems in the mechanisms of optokinetic, nystagmus, optokinetic after-nystagmus and reverse optokinetic after-nystagmus
p0165 A81-40696
Body position stabilization - A fundamental problem of postural regulation
p0177 A81-41779
Algorithms for the clinical analysis of nystagmus eye movements
p0220 A81-47673
Comparative assessment of prognosis of the stop stimulus and trapezoidal rotation programs
[NASA-TM-76336] p0059 N81-15676
Mechanisms for vestibular disorders in space flight. Facts and hypotheses
[NASA-TM-76469] p0060 N81-15685
Significance of vestibular and proprioceptive afferentation in the regulation of human posture
[NASA-TM-76470] p0060 N81-15686
Results of the study of the vestibular apparatus and the functions of the perception of space in cosmonauts (pre- and post-flight observations)
[NASA-TM-76485] p0092 N81-18639
Characteristics of vestibulosensory reactions studied by experimental caloric test
[NASA-TM-76386] p0113 N81-20718
The functional states of the human vestibular analyser following 56 days in an aqueous immersion medium
[NASA-TM-75888] p0114 N81-20725
Results of studies of vestibular function and spatial perception in the crews of the first and second expeditions aboard Salyut-6 station
p0116 N81-21737
Effect of meprobamate on the vestibulosensory and vestibular somatic reaction
[NASA-TM-76104] p0133 N81-22683
Habituation to novel visual vestibular environments with special reference to space flight
[NASA-CR-164437] p0152 N81-25665
To develop behavioral tests of vestibular functioning in the Wistar rat
[NASA-CR-164537] p0170 N81-27778
Changes in animal reactivity under the influence of prolonged rotation
p0184 N81-28710
Vestibular selection criteria development --- assessing susceptability to motion sickness during orbital space flight
[NASA-CR-161044] p0189 N81-28748
Quantitative evaluation of clinical manifestations of motion sickness
p0193 N81-29757

VESTIBULES
The vestibular apparatus
p0003 A81-10823
Responses of the frog primary vestibular afferents to direct vibration of the semicircular canal
[NASA-TM-76332] p0056 N81-15660
Surgical access to separate branches of the cat vestibular nerve
[NASA-TM-76478] p0112 N81-20715
Results of studies of vestibular function and spatial perception in the crews of the first and second expeditions aboard Salyut-6 station
p0116 N81-21737
Human color discrimination during vestibular stimulation after exposure to bright light
p0119 N81-21752

VIBRATION
NT FLUTTER
NT TORSIONAL VIBRATION
Relationship between stress due to physical environmental factors and human reliability
[RAE-LIB-TRANS-2049] p0098 N81-19756

VIBRATION DAMPING
Acceptance and control of aircraft interior noise and vibration
p0065 A81-20057

VIBRATION EFFECTS
Time dependency of whole-body vibration discomfort
p0019 A81-13214
Vibration and high speed low level flying
p0021 A81-13234
Effects of whole-body vibration on spinal reflexes in man
p0023 A81-13507
Effects of vibrations on the human organism
p0046 A81-17145
Variation in human response to whole-body vibration
p0157 A81-38194
Perception, comfort and performance criteria for human beings exposed to whole body pure yaw vibration and vibration containing yaw and translational components
p0161 A81-39916
Effects of whole-body vibrations on sensory motor system performance in man
p0181 A81-43373
Study of catecholamine excretion during vibration sickness
[NASA-TM-76540] p0171 N81-27781
Biodynamic response to whole-body vibration
p0241 N81-34136

VIBRATION MEASUREMENT
Ride quality meter
[NASA-CASE-LAR-12882-1] p0214 N81-31848

VIBRATION METERS
Ride quality meter
[NASA-CASE-LAR-12882-1] p0214 N81-31848

VIBRATION PERCEPTION
Effects of whole-body vibration on spinal reflexes in man
p0023 A81-13507
Variation in human response to whole-body vibration

NT MONOCULAR VISION
NT NIGHT VISION
NT PERIPHERAL VISION
NT STEREOSCOPIC VISION
Comparison of the secondary effects on visual function of two hypotonizing eye washes - An incidence in aeronautics at the time of ophthamological examination of flight personnel
p0008 A81-12761
Vision in space
p0083 A81-23504
Training of pattern recognition by central and peripheral vision
p0124 A81-30743
The role of human visual models in image processing
p0125 A81-30962
General methods to enable robots with vision to acquire, orient and transport workpieces
[PB81-148934] p0151 N81-24732
Eye-fitting of straight lines
[AD-A096716] p0154 N81-25678
Influence of beta blocking atenolol and other medication on the reaction time of the visual system
p0169 N81-26716
Fitness of human vision with exposure to very bright light
p0186 N81-28729
Programmed control of optical grating scales for visual research
[AD-A100792] p0188 N81-28745
A computer model of saccadic suppression
[AD-A101038] p0195 N81-29774
Personal visual aids for aircrew
[AGARD-LS-115] p0214 N81-31849
Problems arising from the wearing of head equipment
p0214 N81-31853
Problems in aeronautics posed by visual deficiencies
p0214 N81-31855
VISUAL ACCOMMODATION
Visual judgments of size and distance
p0020 A81-15685
The visual accommodation response during concurrent mental activity
p0051 A81-19572
Interocular transfer of the motion after-effect is not reduced by binocular rivalry
p0157 A81-38600
VISUAL ACUITY
Comparison of the secondary effects on visual function of two hypotonizing eye washes - An

incidence in aeronautics at the time of
ophthamological examination of flight personnel
p0008 A81-12761
Hyperacuity in the detection of absolute and
differential displacements of random dot patterns
p0025 A81-14744
Displacement detection in human vision
p0072 A81-23098
A local mechanism for differential velocity
detection
p0104 A81-28248
Efficiency of human visual signal discrimination
p0222 A81-48225
Development of a search task for the measurement
of peripheral visual acuity
p0222 A81-48499
Processing of sequential and holistic stimuli in
left and right visual fields
[AD-A091506] p0055 N81-14619
Visual acuity and the balance between receptor
density and ganglion cell receptive field overlap
[AD-A089607] p0060 N81-15689
Ground-referenced visual orientation with imaging
displays
[AD-A094662] p0100 N81-19769
VISUAL AIDS
Magnitude of visual accommodation to a head-up
display
[NASA-TP-1796] p0080 N81-17711
Color coding of displays, maps and images ---
human factors engineering
[FOA-C-53003-H9] p0175 N81-27812
Personal visual aids for aircrew
[AGARD-LS-115] p0214 N81-31849
Creation of learning kits
p0227 N81-32570
VISUAL DISCRIMINATION
Detection of noisy visual targets - Models for the
effects of spatial uncertainty and
signal-to-noise ratio
p0181 A81-42627
The effects on visual discrimination of image
movement across the stationary retina
p0181 A81-43372
Perceived direction of motion under retinal image
stabilization
p0203 A81-46199
Efficiency of human visual signal discrimination
p0222 A81-48225
A literature study on visual motion accuity
(minimum perceptible movement)
[DFVLR-MITT-80-06] p0055 N81-14618
Human color discrimination during vestibular
stimulation after exposure to bright light
p0119 N81-21752
Proposed new vision standards for the 1980's and
beyond: Contrast sensitivity
p0168 N81-26708
VISUAL DISPLAYS
U DISPLAY DEVICES
VISUAL FIELDS
Training of pattern recognition by central and
peripheral vision
p0124 A81-30743
Sensation of rotation about a vertical axis with a
fixed visual field in different illuminations
and in the dark
p0141 A81-34000
Graduated dynamic end point system 'GRADEPS' for
assessment of visual field contraction during
+Gz acceleration
p0224 A81-49952
The ambient visual system and spatial orientation
--- flight stress (biology)
p0078 N81-17702
A multistation spatial disorientation demonstrator
p0079 N81-17708
VISUAL FLIGHT
On the possibilities of pilots to get information
from outside by vision
p0004 A81-11632
A literature study on visual motion accuity
(minimum perceptible movement)
[DFVLR-MITT-80-06] p0055 N81-14618
VISUAL OBSERVATION
On the possibilities of pilots to get information
from outside by vision
p0004 A81-11632
The application of human visual system processing
techniques to remotely sensed data
p0083 A81-23651
Visual evaluation of nystagmus intensity in points
to diagnose vestibular dysfunction
[NASA-TM-76409] p0134 N81-22606
VISUAL PERCEPTION
NT CRITICAL FLICKER FUSION
NT SPACE PERCEPTION
NT VISUAL DISCRIMINATION
On the possibilities of pilots to get information
from outside by vision
p0004 A81-11632
Visual problems in high speed low level flying
p0021 A81-13235
Visual judgments of size and distance
p0028 A81-15685
Motion and vision. III - Stabilized pattern
adaptation
p0029 A81-15708
Visual responses to changing size and to sideways
motion for different directions of motion in
depth - Linearization of visual responses
p0030 A81-15709
The effects of spatial frequency and target type
on perceived duration
p0051 A81-19570
The contribution of visual persistence to the
perceived duration of brief targets
p0051 A81-19571
Direction-specific and position-specific effects
upon detection of displacements during saccadic
eye movements
p0072 A81-23099
Vision in space
p0083 A81-23504
Velocity after-effects - The effects of adaptation
to moving stimuli on the perception of
subsequently seen moving stimuli
p0088 A81-25891
Spatial and temporal factors in the predictive
generation of saccadic eye movements
p0088 A81-25892
Motion sickness caused by rotations about
earth-horizontal and earth-vertical axes
p0088 A81-26444
Visual illusions arising during the perception of
moving images
p0103 A81-27573
A local mechanism for differential velocity
detection
p0104 A81-28248
Eye torsion and the apparent horizon under head
tilt and visual field rotation
p0104 A81-28249
A binocular contribution to the production of
optokinetic nystagmus in normal and stereoblind
subjects
p0104 A81-28250
Contrast sensitivity difference between spatial
sine-wave and square-wave gratings of the human
visual system
p0105 A81-28633
The perception of verticality and the frame of
reference of the visual tilt aftereffect
p0105 A81-28899
Characteristics of the functional mobility of the
visual analyzer
p0106 A81-29315
The coordination of eye and head movements during
the gaze fixation reaction
p0106 A81-29316
Training of pattern recognition by central and
peripheral vision
p0124 A81-30743
Regulation of the tracking movements of the eyes
under various conditions of visual perception
p0124 A81-30744
Sequential color images in the case of physical
work in a hot environment
p0124 A81-30745
Computational vision
p0125 A81-30964
What is the diplopia threshold
p0144 A81-37251
Two-dimensional filtering, oriented line
detectors, and figural aspects as determinants
of visual illusions
p0144 A81-37252

The rod-and-frame illusion in erect and supine observers
p0144 A81-37253
A power law for perceived contrast in human vision
p0157 A81-38599
Interocular transfer of the motion after-effect is not reduced by binocular rivalry
p0157 A81-38600
Perception of runway image shape and approach angle magnitude by pilots in simulated night landing approaches
p0158 A81-38844
The ultimate resolution criterion for out-of-the-cockpit visual scene generation in real time
p0159 A81-39396
The role of M- and N-cholinergic brain systems in the mechanisms of optokinetic, nystagmus, optokinetic after-nystagmus and reverse optokinetic after-nystagmus
p0165 A81-40696
Visual fatigue - The need for an integrated model
p0179 A81-42133
Correlations between visual test results and flying performance on the advanced simulator for pilot training /ASPT/
p0181 A81-43370
The guidance of saccadic eye movements to perceptually mislocalized visual and non-visual targets
p0181 A81-43371
Exterospecific component of the motion parallax field
p0199 A81-44270
Motion sensitivity measured by a psychophysical linearizing technique
p0199 A81-44271
Latency of the perceived offset of brief target gratings --- visual perception and spatial resolution
p0203 A81-46198
Moving and the motion after-effect
p0219 A81-47665
Digital image processing systems and an approach to the display of colors of specified chrominance
[AD-A089587] p0015 N81-10694
The map context as a source of perceptual error in graduated circle maps --- psychophysical test
p0015 N81-10698
Visual effects of sampling in digital picture processing. A pilot study
[FOA-C-53001-H9] p0016 N81-10702
Observed compensation for projective distortion of graphic displays
[AD-A090188] p0018 N81-11637
Efficient computations and representations of visible surfaces
[AD-A089832] p0018 N81-11638
Visual scene perception in manual control
[NLR-MP-79045-U] p0034 N81-12743
Processing of sequential and holistic stimuli in left and right visual fields
[AD-A091588] p0055 N81-14619
Visual illusions as a probable cause of aircraft accidents
p0078 N81-17703
A predictor of human visual performance (PREVIP) at form discrimination tasks
[AD-A093991] p0093 N81-18642
Ground-referenced visual orientation with imaging displays
[AD-A094662] p0100 N81-19769
Visual detection model for structured targets (Perival Program)
[AD-A096084] p0120 N81-21766
A preliminary study of head-up display assessment techniques. 2: HUD symbology and panel information search time
[NASA-TM-78536] p0138 N81-23799
Habituation to novel visual vestibular environments with special reference to space flight
[NASA-CR-164437] p0152 N81-25665
Human sensitivity to high frequency sine wave and pulsed light stimulation as measured by the steady state cortical evoked response
[AD-A097730] p0153 N81-25669
Enhancing sensitivity to visual motion
[AD-A094753] p0155 N81-25679
Inferring shape from motion fields
[AD-A099150] p0167 N81-26698
The Effect of Long Term Therapeutics, Prophylaxis and Screening Techniques on Aircrew Medical Standards
[AGARD-CP-310] p0167 N81-26699
A solid-state dark adaptometer: The LAIR dark adaptometer

 p0025 A81-14124
 Man in the state of low gravity - Physiological problems, clinical aspects, and measures for prevention and protection
 p0044 A81-16900
 Comparative evaluation of the changes in the human organism during antiorthostatic hypokinesia and immersion
 p0044 A81-17077
 The influence of weightlessness on skeletal muscles and neuro-muscular plates
 [IAF PAPER 80-C-119] p0049 A81-18289
 Effect of weightlessness on sympathetic-adrenomedullary activity of rats during space flight on the biosatellites 'COSMOS'
 [IAF PAPER 80-C-120] p0049 A81-18290
 Applicability of silicone membrane as a lung for a fish incubator in space life science research
 [IAF PAPER 80-C-132] p0050 A81-18296
 In vivo bone strain measurements - Clinical results, animal experiments, and a proposal for a study of bone demineralization in weightlessness
 p0081 A81-23393
 The physiological behavior of man in space
 p0082 A81-23502
 Measurement of mass under weightless conditions --- astronaut body weight determination
 p0088 A81-26032
 Motion sickness caused by rotations about earth-horizontal and earth-vertical axes
 p0088 A81-26444
 Variations in gravitoinertial force level affect the gain of the vestibulo-ocular reflex -

Implications of the etiology of space motion sickness
p0089 A81-26771

Change in the biomechanical properties in the bone of rats as a result of a 19-day space flight in the Kosmos-936 satellite
p0104 A81-28116

Potential effects of zero gravity /space flight/ on oncogenesis
p0132 A81-33848

The role of weightlessness in the genetic damage from preflight gamma-irradiation of organisms in experiments aboard the Salyut 6 orbital station
p0164 A81-40376

The action of simulated and true weightlessness on the digestive tract of rats
p0164 A81-40378

Activity of the sympathetic-adrenomedullary system in rats after space flight on the Cosmos biosatellites
p0164 A81-40379

Metabolic changes in rats subjected to space flight for 18.5 days in the biosatellite Cosmos 936
p0165 A81-40382

Changes of deoxyribonucleoprotein in the spleen, thymus and liver of rats exposed to weightlessness and artificial gravity aboard the Cosmos biosatellites
p0165 A81-40383

The Space Sled - A European facility for life-science experiments in Spacelab
p0177 A81-41445

The effects of dynamic space flight factors on animals --- Russian book
p0177 A81-41724

Prospects of autotrophic link functioning in biological life-support systems based on cell biology studies
[IAF PAPER 81-165] p0217 A81-47384

Simple technique to evaluate on the ground the energetic expenditure of physical exercise carried out in weightlessness
[IAF PAPER 81-170] p0218 A81-47388

Structural and functional changes in man accompanying the weightlessness in 'Skylab' flights - A mathematical approach
[IAF PAPER 81-175] p0218 A81-47390

USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 5, 1980
[JPRS-76727] p0011 N81-10663

Fluid-electrolyte homeostasis and weightlessness
p0011 N81-10664

The combined effects of ionizing radiation and weightlessness on calcium and phosphorus content in the mineral fraction of the calcified tissues in the rat skeleton
[NASA-TM-76342] p0057 N81-15661

Preliminary report: Biomedical considerations for future manned space flights
[NASA-CR-152383] p0092 N81-18634

Rheography in weightlessness
[NASA-TM-76439] p0092 N81-18638

Nutrition during long flight
[NASA-TM-76436] p0095 N81-18657

Islet in weightlessness: Biological experiments on board COSMOS 1129 satellite
[NASA-TM-76396] p0109 N81-20692

Ground experiments for finding principles and working out methods for preventing adverse effects of weightlessness on the human organism
[NASA-TM-76465] p0120 N81-21760

Assessment of zero gravity effects on space worker health and safety
[NASA-TM-82330] p0135 N81-22693

US plant and radiation dosimetry experiments flown on the Soviet satellite Cosmos 1129
[NASA-TM-81288] p0151 N81-25655

Habituation to novel visual vestibular environments with special reference to space flight
[NASA-CR-164437] p0152 N81-25665

USSR Report: Space Biology and Aerospace Medicine, vol. 14, no. 6
[JPRS-77311] p0183 N81-28699

Study of hemodynamics and phase structure of cardiac cycle in second crew of the Salyut-6 orbital station at rest
p0183 N81-28701

Theoretical left ventricular ejection period in weightlessness
p0183 N81-28703

Results of heat transfer-1 experiment conducted aboard the Cosmos-936 biosatellite
p0185 N81-28716

A device for studying the turning reflex in small laboratory animals
p0185 N81-28717

USSR Report: Space Biology and Aerospace Medicine, volume 15, no. 2, March - April 1981
[JPRS-78028] p0186 N81-28722

Biological research in space
p0186 N81-28730

Animal experiments aboard biosatellites of the Cosmos series: Results and prospects
p0186 N81-28731

Morphological effects of weightlessness and pathogenesis thereof
p0187 N81-28732

Soviet research on artificial gravity
p0187 N81-28733

Effect of persistent regional vascular hypotension on growth of malignant tumors
p0193 N81-29754

Dystrophic changes and functional impairment of deafferentiated bone marrow
p0193 N81-29755

Analysis of body calcium (regional changes in body calcium by in vivo neutron activation analysis)
[NASA-CR-161027] p0194 N81-29766

Effects of the Cosmos 1129 Soviet paste diet on body composition in the growing rat
[NASA-CR-164725] p0209 N81-31810

US rat experiments flown on the Soviet satellite Cosmos 1129
[NASA-TM-81289] p0227 N81-32830

Experiment K304: Studies of specific hepatic enzymes and liver constituents involved in the conversion of carbohydrates to lipids in rats exposed to prolonged space flight
p0227 N81-32831

Experiment K305: Quantitative analysis of selected bone parameters
p0227 N81-32832

Experiment K305: Quantitative analysis of selected bone parameters. Supplement 1: Effects of weightlessness on osteoblast differentiation in rat molar periodontium
p0227 N81-32833

Experiment K305: Quantitative analysis of selected bone parameters. Supplement 2: Bone elongation rate and bone mass in metaphysis of long bones
p0228 N81-32834

Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3A: Trabecular spacing and orientation in the long bones
p0228 N81-32835

Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3B: Mineralization in the long bones
p0228 N81-32836

Experiment K307: Vertebral body strength of rat spinal columns
p0228 N81-32837

Experiment K-308: Automatic analysis of muscle fibers from rats subjected to spaceflight
p0228 N81-32838

Experiment K-310: The effect of spaceflight on osteogenesis and dentinogenesis in the mandibles of rats
p0228 N81-32839

Experiment K-310: The effect of space flight on ostenogenesis and dentinogenesis in the mandible of rats. Supplement 1: The effects of space flight on alveolar bone modeling and remodeling in the rat mandible
p0228 N81-32840

Experiment K-313: Rat and quail ontogenesis
p0229 N81-32841

Experiment K-314: Fetal and neonatal rat bone and joint development following in Utero spaceflight
p0229 N81-32842

Experiment K-315: Studies of the nasal mucosa
p0229 N81-32843

Experiment K-316: Effects of weightlessness on body composition in the rat

p0229 N81-32844
Experiment K-317: Bone resorption in rats during spaceflight
p0229 N81-32845
Artificial gravity as a means of preventing atrophic skeletal changes
p0236 N81-33791
States of catecholamines and enzymes of synthesis thereof in the adrenal medulla of rats after flight aboard Cosmos-936 biosatellite
p0236 N81-33792
Flour beetle reproduction and mutability in weightlessness (experiments aboard Salyut-6 orbital station)
p0236 N81-33793

WEIGHTLESSNESS SIMULATION
Correlation between vestibular sensitization and leg muscle relaxation under weightlessness simulated by water immersion
[IAF PAPER 80-C-128] p0049 A81-18294
Validity of physical restraint as a tool for simulating weightlessness estimated by changes in heat balance and cardiovascular functions
[IAF PAPER 80-C-131] p0050 A81-18295
Human adaptation to simulated gravitational fields
p0163 A81-40372
Changes in the microstructure of the vestibular apparatus of tadpoles /Rana temporaria/ developed in simulated weightlessness
p0164 A81-40374
Age-related reactions of rat bones to their unloading --- effect of simulated weightlessness
p0205 A81-47108
Antiorthostatic hypokinesia as a means of simulating weightlessness
[IAF PAPER 81-178] p0218 A81-47392
Renal function and gluCOrticoid activity of the adrenal cortex during immersion
p0012 N81-10673
Shuttle remote manipulator system hardware test facility
p0053 N81-14146
Ground experiments for finding principles and working out methods for preventing adverse effects of weightlessness on the human organism
[NASA-TM-76465] p0120 N81-21760
Relationship between pulsed filling of earlobe vessels and cardiac extrasystole during head-pelvis accelerations after exposure to simulated weightlessness
p0184 N81-28712
Effect of persistent regional vascular hypotension on growth of malignant tumors
p0193 N81-29754

WHIRL
U ROTATION
WHIRLING
U ROTATION
WIGHTMAN THEORY
U FIELD THEORY (PHYSICS)
WILDLIFE
NT BABOONS
NT BIRDS
WILDLIFE RADIOLOCATION
Heart rate, multiple body temperature, long-range and long-life telemetry system for free-ranging animals
p0141 A81-34050
WINDSCREENS
U WINDSHIELDS
WINDSHIELDS
Pilot reactions to optical defects found in F-111 bird impact resistant windscreens
[AD-A093937] p0096 N81-18663
WOMEN
U FEMALES
WORDS (LANGUAGE)
Human memorizing of emotionally significant and neutral information during adaptation to different climato-geographic conditions
p0107 A81-29322
WORK
NT PHYSICAL WORK
Seasonal changes in leukocyte count and phagocytic activity of leukocytes in individuals working in a closed environment
p0185 N81-28720
WORK CAPACITY
Sleep and mental work capacity
p0045 A81-17085
Technical evaluation report of the Aerospace Medical Panel Working Group WG-08 on Evaluation of Methods to Assess Workload
[AGARD-AR-139] p0076 N81-16739
Maximum oxygen uptake as a criterion of human resistance to hypoxia, pyoerthermia and hypothermia
p0183 N81-28700

WORK-REST CYCLE
The psychophysiological basis for optimal interflight intervals for flight crews
p0023 A81-13525
Sleep and mental work capacity
p0045 A81-17085
Hypoxia effects on plasma volume shifts at rest, work, and recovery in supine posture
p0178 A81-41789
Fatigue and associated performance decrements in air transport operations
[NASA-CR-166167] p0135 N81-22696
Forty-eight versus twenty-four hour duty for USAF missile crews: A feasibility study using subjective measures of fatigue
[AD-A094837] p0154 N81-25673
Sleep distinctions, circadian rhythm of physiological functions and efficiency of man on first day after shift in sleeping-waking cycle
p0183 N81-28704
Circadian biorhythms and flight planning
p0187 N81-28735

WORKLOADS (PSYCHOPHYSIOLOGY)
Self-paced hard work comparing men and women
p0006 A81-12252
The psychophysiological basis for optimal interflight intervals for flight crews
p0023 A81-13525
Cockpit workload, residual attention, and pilot error
p0029 A81-15690
Psychophysiological aspects of the superslow rhythmic activity of the brain --- Russian book
p0039 A81-16594
Pilot workload during an instrument approach
p0046 A81-17162
Mental workload in decision and control
p0065 A81-20499
Helicopter pilot performance and workload as a function of night vision symbologies
p0066 A81-20502
Development of a secondary task method for measuring operator workload. II - A change of secondary task performance with acquisition of flying skill by Link Trainer
p0069 A81-21987
The design of cosmonaut living and working conditions --- Russian book
p0103 A81-27537
The dynamics of psychophysiological and cardiovascular indicators during operator activity in the expectation and tracking regimes
p0106 A81-29317
The evaluation of the state of stress of an operator according to electrocardiogram statistical characteristics
p0106 A81-29318
Development of a secondary task method for measuring operator workload. III - A change of secondary task performance during flight by T-2 flight simulator. IV - Effects of subsidiary signal modes on secondary task performance
p0178 A81-41813
Comparison of helicopter copilot workload while using three navigation systems during nap-of-the-earth flight
p0204 A81-46616
The influence of hyperbaric environment in combination with workload and confinement on human information processing
[ESA-TT-567] p0015 N81-10696
Evaluation of static work capabilities in a hot environment
p0062 N81-15697
Percentual errors in flight: A survey of 100 military pilots on active duty
p0078 N81-17701
Analysis of heart rate variability as an estimate of pilot workload in human engineering research
[ESA-TT-653] p0120 N81-21764

Effects of criteria on flight simulation. Study 2: Multiple criteria
[AD-A097526] p0138 N81-23794
Fatigue and workload in four-man C-5A cockpit crews (volant galaxy)
[AD-A094498] p0155 N81-25683
**WORLD**
U EARTH (PLANET)
**WRIST**
A three roll wrist robot
[SME PAPER MS80-699] p0202 A81-45666

## X

**X RAY ABSORPTION**
Low X-ray absorption aneurism clips
[NASA-CASE-LAR-12650-1] p0195 N81-29768
**X RAY ANALYSIS**
Computerized tomographic determination of spinal bone mineral content
[NASA-CR-160891] p0054 N81-14615
**X RAY APPARATUS**
A new CT collimator for producing two simultaneous overlapping slices from one scan --- for biomedical applications
p0220 A81-47675
Routine compliance testing for diagnostic X-ray systems
[PB81-201501] p0232 N81-32862
**X RAY DIFFRACTION**
Synchrotron radiation sources for photobiology and ultraviolet, visible and infrared spectroscopy
[BNL-28149] p0031 N81-12722
**X RAY IMAGERY**
A bandpass filter for the enhancement of an X-ray reconstruction of the tissue in the spinal canal
p0039 A81-16625
**X RAY IRRADIATION**
Effect of X-rays on the bone marrow cells of white mice under conditions of hypoxia
p0204 A81-46825
**X RAYS**
Effect on mouse skin of radiation differing in linear energy transfer
p0193 N81-29753
Criteria for adequate radiation control programs (X Ray): A report of task force 2A
[PB81-197881] p0231 N81-32860

## Y

**YAG LASERS**
Experimental investigations and new instrumentation for Nd:YAG laser treatment in urology
[MBB-UA-517/79-OE] p0207 N81-30794
**YEAST**
Subunit specificity of the two acetyl-CoA synthetases of yeast as revealed by an immunological approach
p0027 A81-15483
Study of the characteristics of damage to yeast cells caused by high-intensity UV radiation at 266 nm
p0088 A81-25919
**YHU-1 HELICOPTER**
U UH-1 HELICOPTER
**YIELD**
Pressure harvesting of microalgae
[PB80-221781] p0054 N81-14609
**YTTRIUM**
An approach to the mechanism of the asymmetrical radical formation in yttrium-90-beta-irradiated D- and L-alanines
p0127 A81-32054
**YUH-1 HELICOPTER**
U UH-1 HELICOPTER

## Z

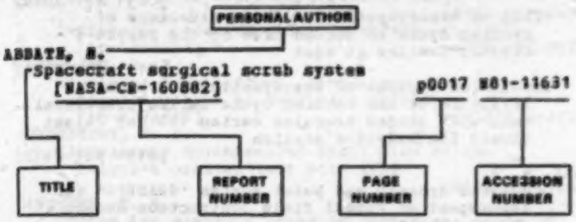
U WEIGHTLESSNESS

# PERSONAL AUTHOR INDEX

**AEROSPACE MEDICINE AND BIOLOGY** / *a continuing bibliography* JANUARY 1982

1981 Cumulative Index

### Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title, e.g. p0017 N81-11631. Under any one author's name the accession numbers are arranged in sequence with the *IAA* accession numbers appearing first.

## A

AAKVAAG, A.
Altered hormonal response to short-term bicycle exercise in young men after prolonged physical strain, caloric deficit, and sleep deprivation
p0003 A81-11196

ABAKUMOVA, I. A.
Use of some nutrients from inedible plant sources as food
p0192 N81-29749

ABBATE, M.
Spacecraft surgical scrub system
[NASA-CR-160882] p0017 N81-11631

ABDEL GADIR, O. M.
Microprocessor-based real time system for eye motion analysis
p0125 A81-31522

ABDUSATTAROV, A.
The enzyme spectrum of the small intestine with hypodynamia under conditions of high temperature
[NASA-TM-76150] p0114 N81-20727

ABE, M.
On the modification of orthostatic tolerance by athletic training and its relation with the physical fitness
[IAF PAPER 80-C-117] p0048 A81-18288

ABEL, L. A.
Dependence of optokinetic nystagmus characteristics upon recording techniques
p0005 A81-12234

ABRAHAM, S.
The effects of space flight on some rat liver enzymes regulating carbohydrate and lipid metabolism
p0165 A81-40381

Experiment K304: Studies of specific hepatic enzymes and liver constituents involved in the conversion of carbohydrates to lipids in rats exposed to prolonged space flight
p0227 N81-32831

ABRAMENKO, I. V.
Dystrophic changes and functional impairment of deafferentiated bone marrow
p0193 N81-29755

ABRAMOVA, V. M.
The flowering and ripening of Arabidopsis seeds under weightlessness conditions - Biosatellite Kosmos 1129 experiment
p0066 A81-20849

Biological investigations aboard the biosatellite Cosmos-1129
p0163 A81-40367

ABROSIMOV, S. V.
The effect of short-term antiorthostatic hypokinesia on central and intracardiac hemodynamics and metabolism of a healthy person
[NASA-TM-76525] p0134 N81-22689

ADACHI, R. R.
Experiment K-317: Bone resorption in rats during spaceflight
p0229 N81-32845

ADAMCHIK, Z. G.
Circulatory reactions of first crew of the Salyut-6 orbital test with LBNP
p0011 N81-10668

ADAMS, J. D.
Evaluation of full-head enclosed breathing system for extended exposure at high altitude
p0069 A81-22077

ADAVAL, S. K.
A histopathological study of coronary arteries in aircrew fatalities during 1962-1978
p0224 A81-49951

ADAVAL, N. K.
Pulmonary fat embolism in aircrew fatalities
p0020 A81-13227

ADEY, W. R.
Tissue interaction with nonionizing electromagnetic fields
[DE81-027654] p0231 N81-32858

ADLER, H. I.
Novel approach to the growth of anaerobic microorganisms
[CONF-810554-1] p0207 N81-30790

ADOMIAN, G. E.
The ultrastructural basis for the photomechanical response in the photoreceptors of the vertebrate retina
p0091 N81-18631

AEBERHARD, E. E.
Metabolism of fatty acids in rat brain in microsomal membranes
[UCLA-12/1289] p0147 N81-24710

AGADZHANYAN, N. A.
Optimum atmosphere in pressurized cabins and future use thereof
p0186 N81-28728

AHLERS, I.
The effect of artificial gravity on plasma and tissue lipids in rats The Cosmos 936 experiment
p0164 A81-40380

AINSWORTH, E. J.
Cataract production in mice by heavy charged particles
[NASA-CR-164599] p0190 N81-29734

AKABOSHI, M.
An approach to the mechanism of the asymmetrical radical formation in yttrium-90-beta-irradiated D- and L-alanines
p0127 A81-32054

AKANA, S. F.
Neuroendocrine strategies for adaptation to high altitude
p0073 N81-16717

AKATOV, IU. A.
Effects of prolonged exposure to space flight factors for 175 days on lettuce seeds
p0162 A81-40366

AKHTAR, M.
Ambulatory monitoring in evaluation of aircrew with cardiovascular problems
p0020 A81-13228

AKHUNOV, A. A.
Effect of chronic Gamma irradiation on protein composition and cholesterol content of canine blood
p0235 N81-33786

AKINS, F. R.
Psychological and psychophysiological effects of long duration space flight
p0180 A81-42514
Preliminary report: Biomedical considerations for future manned space flights
[NASA-CR-152383] p0092 N81-18634
Performance considerations in long-term spaceflight
[NASA-CR-152384] p0095 N81-18651
Preliminary Report: Issues in selection and training for long duration space flight
[NASA-CR-152386] p0095 N81-18652
AKOEV, B. I.
A review and comparative analysis of the biological damage induced during space flight by HZE particles and space hadrons
p0162 A81-40365
AKOEV, I. G.
A review and comparative analysis of the biological damage induced during space flight by HZE particles and space hadrons
p0162 A81-40365
AL-SUHAILANI, A. R. S.
The influence of physical conditioning and deconditioning upon cardiac structure of males and females
p0171 N81-27782
ALADZHALOVA, N. A.
Psychophysiological aspects of the superslow rhythmic activity of the brain
p0039 A81-16594
ALAVERDIAN, A. S.
Relic processes in the rat circulatory system during long-term adaptation to hypoxia
p0104 A81-27575
ALBANESE, R.
A stochastic differential game theory approach to human operators in adversary tracking encounters
p0067 A81-21023
ALBUS, J.
Proceedings of NBS/Air Force ICAM workshop on robot interfaces
[SME PAPER MSR80-06] p0202 A81-45664
ALDERFER, C. P.
The methodology of diagnosing group and intergroup relations in organizations
[AD-A087474] p0016 N81-10699
Group intergroup relations in living human species
[AD-A087473] p0016 N81-10700
ALDRICH, D. C.
Radiation protection: An analysis of thyroid blocking
[SAND-80-2148C] p0036 N81-13631
ALEKSANDROV, I. A.
Morphological and functional evaluation of the external respiratory system of rabbits with subacute oxygen toxicity
p0192 N81-29744
ALEKSANDROVA, E. A.
Comparative evaluation of the changes in the human organism during antiorthostatic hypokinesia and immersion
p0044 A81-17077
ALEKSANDROVA, N. V.
Age characteristics of changes in invertase activity of the mucous membrane of the small intestine
[NASA-TM-76385] p0092 N81-18637
ALEKSENKO, N. IU.
The sensitivity of the auditory and tactile sensory systems upon separate and simultaneous stimulation
p0045 A81-17087
ALEKSEEV, V. N.
Operator psychophysiology in man-machine systems
p0126 A81-31849
ALEKSEYEV, V. N.
Results of the study of the vestibular apparatus and the functions of the perception of space in cosmonauts (pre- and post-flight observations)
[NASA-TM-76485] p0092 N81-18639
Results of studies of vestibular function and spatial perception in the crews of the first and second expeditions aboard Salyut-6 station
p0116 N81-21737
ALEKSEYEV, Y. I.
Age-related changes in body and visceral weight of Wistar rats
p0236 N81-33797
ALFEROV, O. A.
Effect of attenuated geomagnetic field on E. coli resistance to ultraviolet rays
p0235 N81-33789
ALFEROVA, I. V.
Circulatory reactions of first crew of the Salyut-6 orbital test with LBNP
p0011 N81-10668
Dynamics of diastolic phase structure during a 140 day space flight
p0011 N81-10669
Study of hemodynamics and phase structure of cardiac cycle in second crew of the Salyut-6 orbital station at rest
p0183 N81-28701
Results of studies of hemodynamics and phase structure of the cardiac cycle during functional test with graded exercise during 140-day flight aboard the Salyut-6 station
p0191 N81-29739
ALI, A. K.
Graduated dynamic and point system 'GRADEPS' for assessment of visual field contraction during +Gz acceleration
p0224 A81-49952
ALIUKHIN, IU. S.
Efficiency of the rat heart and muscular system following physical training and hypokinesia
p0044 A81-17050
ALLAART, J. H.
Microfossil-like objects from the Archaean of Greenland - A cautionary note
p0048 A81-18049
ALLAN, J. R.
Heat stress in front and rear cockpits of F-4 aircraft
p0142 A81-34302
ALLEN, J. P.
In-flight oxygen generating equipment
p0173 N81-27802
ALLEN, R. G.
Evaluation of PLZT goggles
[AD-A094898] p0100 N81-19772
ALLEN, S. J.
Measurements of the RF power absorption in spheroidal human and animal phantoms exposed to the near field of a dipole source
p0125 A81-31165
ALLES, W.
Investigations into the manual computer-aided piloting of a transport airplane along unconventional approach paths
p0107 A81-29695
ALNAES, E.
Physical fitness and cardiovascular capacity: An epidemiological program
p0167 N81-26700
Cardiovascular risk factors in the pilot population: A policy discussion
p0169 N81-26712
ALOIA, J.
Effect of physical activity on body composition

Control of breathing during prolonged exercise
p0067 A81-21471
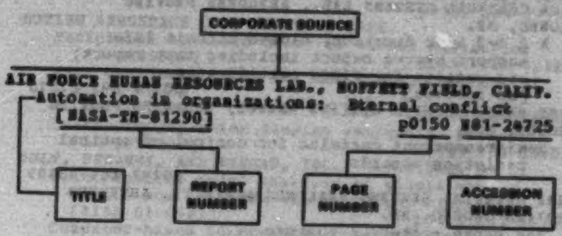
**ZYBIN, O. K.**
Activity of the right cardiac ventricle and metabolism in healthy persons during an orthostatic test after short term immobilization
[NASA-TM-76519] p0114 N81-20726
The effect of short-term antiorthostatic hypokinesia on central and intracardiac hemodynamics and metabolism of a healthy person
[NASA-TM-76525] p0134 N81-22689
**ZYBIN, O. KH.**
The influence of arm work in the antiorthostatic position on indicators of left ventricle activity
p0201 A81-44894

# CORPORATE SOURCE INDEX

**AEROSPACE MEDICINE AND BIOLOGY** / *a continuing bibliography* JANUARY 1982

**1981 Cumulative Index**

### Typical Corporate Source Index Listing



CORPORATE SOURCE
AIR FORCE HUMAN RESOURCES LAB., MOFFETT FIELD, CALIF.
Automation in organizations: Eternal conflict
[NASA-TM-81290] p0150 N81-24725
TITLE
REPORT NUMBER
PAGE NUMBER
ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title, e.g. p 0150 N81-24725. Under any corporate source the accession numbers are arranged in sequence with the *IAA* accession numbers appearing first.

## A

**ACADEMY OF NATURAL SCIENCES OF PHILADELPHIA, PA.**

Phytoplankton studies and nutrient concentrations in the vicinity of the C. P. Crane Generating Station
[PB81-114746] p0077 N81-17693

**ACUREX CORP., MOUNTAIN VIEW, CALIF.**

Further study for fabrication, evaluation, and testing of monolayer woven materials for space suit insulation
[NASA-CR-166140] p0076 N81-16740

Study for fabrication, evaluation, and testing of monolayer woven type materials for space suit insulation
[NASA-CR-166139] p0136 N81-22700

**ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).**

Technical evaluation report of the Aerospace Medical Panel Working Group WG-08 on Evaluation of Methods to Assess Workload
[AGARD-AR-139] p0076 N81-16739

Spatial disorientation in flight: Current problems
[AGARD-CP-287] p0078 N81-17690

An update of findings regarding spatial disorientation in flight: A reconsideration of underlying mechanisms
p0078 N81-17700

Significance of circadian rhythms in aerospace operations
[AGARD-AG-247] p0148 N81-24715

The Effect of Long Term Therapeutics, Prophylaxis and Screening Techniques on Aircrew Medical Standards
[AGARD-CP-310] p0167 N81-26699

Toxic Hazards in Aviation
[AGARD-CP-309] p0172 N81-27791

Sixth advanced operational aviation medicine course
[AGARD-R-681] p0211 N81-31827

NATO regulations on the cardio-vascular system
p0211 N81-31829

Epidemiological basis for the prevention of coronary heart disease
p0212 N81-31835

Personal visual aids for aircrew
[AGARD-LS-115] p0214 N81-31849

**AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).**

Evaluations of a modified crew seat for the Iroquois
[ARL/APP-REPT-80] p0232 N81-32865

**AERONAUTICAL SYSTEMS DIV., WRIGHT-PATTERSON AFB, OHIO.**

Acquisition strategy implications of a Long Range Combat Aircraft (LRCA)
[AD-A091109] p0034 N81-13618

In-flight oxygen generating equipment
p0173 N81-27802

**AEROSPACE MEDICAL DIV., BROOKS AFB, TEX.**

Detection of coronary artery disease in asymptomatic aircrew members with thallium-201 scintigraphy
p0169 N81-26713

**AEROSPACE MEDICAL RESEARCH LABS., WRIGHT-PATTERSON AFB, OHIO.**

A predictor of human visual performance (PHUVIP) at form discrimination tasks
[AD-A093991] p0093 N81-18642

Pilot reactions to optical defects found in F-111 bird impact resistant windscreens
[AD-A093937] p0096 N81-18663

Radioactive microsphere study of cerebral blood flow under acceleration
[AD-A094623] p0154 N81-25677

Experience with highly selective screening techniques for acceleration stress duty
p0168 N81-26704

Proposed new vision standards for the 1980's and beyond: Contrast sensitivity
p0168 N81-26708

Ramjet fuel toxicology
p0172 N81-27792

The oncogenic hazard from chronic inhalation of hydrazine
p0173 N81-27796

Experiment K307: Vertebral body strength of rat spinal columns
p0228 N81-32837

**AIR COMMAND AND STAFF COLL., MAXWELL AFB, ALA.**

New training realism for B-52 crews
[AD-A100571] p0189 N81-28749

**AIR FORCE ACADEMY, COLO.**

Processing of sequential and holistic stimuli in left and right visual fields
[AD-A091588] p0055 N81-14619

Effects of criteria on flight simulation. Study 2: Multiple criteria
[AD-A097526] p0138 N81-23794

**AIR FORCE HUMAN RESOURCES LAB., MOFFETT FIELD, CALIF.**

Automation in organizations: Eternal conflict
[NASA-TM-81290] p0150 N81-24725

**AIR FORCE HUMAN RESOURCES LAB., WRIGHT-PATTERSON AFB, OHIO.**

Visual fatigue - The need for an integrated model
p0179 A81-42133

**AIR FORCE INST. OF AVIATION MEDICINE, FUERSTENFELDBRUCK (WEST GERMANY).**

Effects of age, flying time and type of aircraft on the hearing of German military pilots, and its significance for inflight communication
p0209 N81-31469

Eye protection and tinted lenses
p0214 N81-31852

**AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.**

A viscoelastic finite element model of the human intervertebral joint
[AD-A094774] p0099 N81-19764

Programmed control of optical grating scales for visual research
[AD-A100792] p0188 N81-28745

Aircrew inflight physiological data acquisition system
[AD-A100646] p0195 N81-29772

Digital control system for an on board oxygen generator
[AD-A100823] p0196 N81-29780

AIR FORCE MATERIALS LAB., WRIGHT-PATTERSON AFB, OHIO.
Male and female strength capabilities for operating aircraft controls
[AD-A098256] p0150 N81-24730

AKRON UNIV., OHIO.
The University of Akron urban air pollution and human health study
[PB81-213282] p0238 N81-33811

ALABAMA UNIV., BIRMINGHAM.
Electrophoretic cell separation by means of immunomicrospheres
p0180 A81-42175
Electrophoretic cell separation using microspheres
[NASA-CR-164168] p0115 N81-21730

ALABAMA UNIV. IN HUNTSVILLE.
Payload Crew Training Complex (PCTC) utilization and training plan
p0018 N81-11990

AMHERST COLL., MASS.
The visual accommodation response during concurrent mental activity
p0051 A81-19572

AMSTERDAM UNIV. (NETHERLANDS).
The effect of noise on the vestibular system
p0200 N81-31455

ANALYTICS, INC., WILLOW GROVE, PA.
A human operator simulator model of the NASA Terminal Configured Vehicle (TCV)
[NASA-CR-3421] p0136 N81-22701

ANTHROPOLOGY RESEARCH PROJECT, YELLOW SPRINGS, OHIO.
An anthropometric data base for commercial design applications, phase 1
[PB81-211070] p0240 N81-33824

APPLIED PSYCHOLOGICAL SERVICES, WAYNE, PA.
Computer simulation of human performance in electronic processed imagery systems
[AD-A097622] p0139 N81-23801
Human performance in continuous operations: Description of a simulation model and user's manual for evaluation of performance degradation
[AD-A101950] p0214 N81-31056

ARGONNE NATIONAL LAB., ILL.
Radioactivity in man: Levels, effects and unknowns
[CONF-800392-1] p0017 N81-11634
Environmental assessment for the Satellite Power System (SPS): Studies of honey bees exposed to 2.45 GHz continuous wave electromagnetic energy
[NASA-CR-164223] p0133 N81-22679
Health effects of synfuels technology: A review
[ANL/ES-111] p0172 N81-27709
Potential health and safety impacts from distribution storage alcohol fuels
[ANL/CNSV/TM-61] p0207 N81-30709
Toward a theory of the initiation of cancer by ionizing radiation: Track structure analysis for electrons and alpha particles in water
[CONF-800944-8] p0210 N81-31021
Toward a theory of the initiation of cancer by ionizing radiation. The twin doublet pair model
[CONF-800944-7] p0211 N81-31023
Biomedical effects associated with energy-transmissions systems: Effects of 60-Hz electric fields on circadian and ultradian physiological and behavioral functions in small rodents
[DE81-027655] p0231 N81-32057

ARIZONA STATE UNIV., TEMPE.
Quantification of monocarboxylic acids from a spark discharge synthesis
p0132 A81-33798
Amino acids of the Murchison meteorite. I - Six carbon acyclic primary alpha-amino alkanoic acids
p0202 A81-45495

ARIZONA UNIV., TUCSON.
Amino acids and hydrocarbons approximately 3,800-Myr old in the Isua rocks, southwestern Greenland
p0048 A81-18050
Direct observation of electron transfer across a lipid bilayer: Laser photolysis of an asymmetric vesicle system containing chlorophyll, methyl viologen, and EDTA
[DOE/ER-04927/T1] p0151 N81-25657
Chlorophyll-quinone photochemistry in liposomes: Mechanisms of radical formation and decay
[DOE/ER-04927/T2] p0151 N81-25658

ARMY AEROMEDICAL RESEARCH LAB., FORT RUCKER, ALA.
Evaluation of Army aviator human factors, fatigue, in a high threat environment
[AD-A090751] p0032 N81-12730
SPH-4 helmet damage and head injury correlation
[AD-A090750] p0033 N81-12740
Hearing impaired aviators in the U.S. Army
p0209 N81-31471

ARMY AIR CORPS, STOCKBRIDGE (ENGLAND).
Disorientation in Army helicopter operations: A general review
p0079 N81-17704

ARMY CHEMICAL SYSTEMS LAB., ABERDEEN PROVING GROUND, MD.
A 2 1/2 hour duration, closed circuit life support system report including test report and outline for NIOSH certification
[AD-A099763] p0174 N81-27810

ARMY ENVIRONMENTAL HYGIENE AGENCY, ABERDEEN PROVING GROUND, MD.
Semitransparent curtains for control of optical radiation hazards
p0182 A81-43409

ARMY MATERIEL SYSTEMS ANALYSIS ACTIVITY, ABERDEEN PROVING GROUND, MD.
The prone protected posture
[AD-A089818] p0017 N81-11632

ARMY MEDICAL RESEARCH INST. OF INFECTIOUS DISEASES, FREDERICK, MD.
The action of botulinum toxin at the neuromuscular junction
[AD-A094643] p0099 N81-19761

ARMY MOBILITY EQUIPMENT COMMAND, FORT BELVOIR, VA.
Effects of low power microwaves on the local cerebral blood flow of conscious rats
[AD-A090426] p0031 N81-12720

ARMY RESEARCH INST. OF ENVIRONMENTAL MEDICINE, NATICK, MASS.
Physiological and hematological responses to summer and winter dry-heat acclimation
[AD-A093194] p0077 N81-17695
Thermal comfort in an era of energy shortage
[AD-A093193] p0078 N81-17696
Use of a wetted cover to reduce heat stress in impermeable clothing
[AD-A094322] p0094 N81-18648

ATOMIC ENERGY COMMISSION RESEARCH ESTABLISHMENT, RISO (DENMARK).
On the structure of knowledge. A morphology of mental models in a man-machine system context
[RISO-M-2192] p0101 N81-19774
The role of conceptual structures in analyzing operator behavior
[RISO-M-2217] p0101 N81-19775

AUBURN UNIV., ALA.
A ranking algorithm for spacelab crew and experiment scheduling
p0018 N81-11986

## B

BALLISTIC RESEARCH LABS., ABERDEEN PROVING GROUND, MD.
Analysis of man-in-the-loop control systems in the presence of nonlinearities
[AD-A102574] p0232 N81-32067

BATTELLE COLUMBUS LABS., MOUNTAIN VIEW, CALIF.
Fatigue and associated performance decrements in air transport operations
[NASA-CR-166167] p0135 N81-22696

BATTELLE PACIFIC NORTHWEST LABS., RICHLAND, WASH.
Evaluation of several methods for assessing the effects of occupational exposure to radiation
[PNL-SA-8936] p0032 N81-12733
Chemical characterization and toxicologic evaluation of airborne mixtures
[AD-A102670] p0231 N81-32055

BAYLOR UNIV., DALLAS, TEX.
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3A: Trabecular spacing and orientation in the long bones
p0220 N81-32835
Experiment K305: Quantitative analysis of selected bone parameters. Supplement 3B: Mineralization in the long bones
p0220 N81-32836

BAYLOR UNIV., HOUSTON, TEX.
Evaluation of materials proposed for use in

space flight
[NASA-CR-160991] p0155 N81-25681
Analysis of body calcium (regional changes in body calcium by in vivo neutron activation analysis)
[NASA-CR-161027] p0194 N81-29766
BIO SPACE, INC., PAINESVILLE, OHIO.
Experiment K-313: Rat and quail ontogenesis
p0229 N81-32861
BIOSPHERICS, INC., ROCKVILLE, MD.
A search for a nonbiological explanation of the Viking Labeled Release life detection experiment
p0157 A81-37959
BOEING AEROSPACE CO., SEATTLE, WASH.
Peripheral cues and color in visual simulation
[AD-A089837] p0031 N81-12726
Navy manager's guide for the design sections of MIL-H-46855
[AD-A092009] p0076 N81-16742
Instructor/operator display evaluation methods
[AD-A097208] p0139 N81-23802
BOLT, BERANEK, AND NEWMAN, INC., CAMBRIDGE, MASS.
Pilot/vehicle model analysis of visual and motion cue requirements in flight simulation
[AIAA 81-0972] p0143 A81-36561
Computer-based interactive flight training
[AD-A094808] p0099 N81-19766
BOSTON UNIV., MASS.
Are sulfur isotope ratios sufficient to determine the antiquity of sulfate reduction
p0047 A81-17983
Stability of individual loudness functions obtained by magnitude estimation and production
p0067 A81-25775
BRANDEIS UNIV., WALTHAM, MASS.
Variations in gravitoinertial force level affect the gain of the vestibulo-ocular reflex - Implications of the etiology of space motion sickness
p0089 A81-26771
The guidance of saccadic eye movements to perceptually mislocalized visual and non-visual targets
p0181 A81-43371
Effects of light on respiration and development of photosynthetic cells
[DOE/ER-03231/5] p0098 N81-19755
Vestibular selection criteria development
[NASA-CR-161046] p0189 N81-28740
BRITISH LIBRARY LENDING DIV., BOSTON SPA (ENGLAND).
Instrumental assessment of sharpness of outline of zones of inhibition of growth of test microorganisms during diffusion of antibiotics in infected agar
[BLL-RTS-12497] p0170 N81-27776
Pelagic gammarids of the tropical part of the Pacific Ocean
[BLL-RTS-12449A] p0170 N81-27777
A respiration apparatus for the clinical determination of the energy turnover in man
[BLL-RTS-12030] p0171 N81-27784
Impairment of performance by alcohol and diazepam
[BLL-RTS-12193] p0188 N81-28741
Literature sources in toxicology: A survey
[BLL-BLRDR-5542] p0239 N81-33814
BROOKHAVEN NATIONAL LAB., UPTON, N. Y.
Effect of physical activity on body composition
[BNL-28008] p0017 N81-11633
Synchrotron radiation sources for photobiology and ultraviolet, visible and infrared spectroscopy
[BNL-28149] p0031 N81-12722
Photoreactivation in bacteria and in skin
[BNL-28385] p0058 N81-15668
Cycles and Q-cycles in plant photosynthesis
[BNL-28684] p0097 N81-19753
BROWN UNIV., PROVIDENCE, R. I.
Parameter identification techniques for physiological control systems
[AD-A090547] p0032 N81-12728
Light adaptation and lateral inhibition in the vertebrate retina
p0167 N81-26696
BRUCE LYON MEMORIAL RESEARCH LAB., OAKLAND, CALIF.
The effects of space flight on some rat liver enzymes regulating carbohydrate and lipid metabolism
p0165 A81-40381

D

BUREAU OF MINES, PITTSBURGH, PA.
A breathing metabolic simulator for testing respiratory protective equipment
[PB81-179913] p0196 N81-29779
BUREAU OF RADIOLOGICAL HEALTH, ROCKVILLE, MD.
Microwave hazard instruments: An evaluation of the Narda 8100, Holaday HI-1500, and Simpson 380M
[PB80-227820] p0061 N81-15693
An evaluation of radiation emission from video display terminals
[PB81-198483] p0211 N81-31826
Routine compliance testing for diagnostic X-ray systems
[PB81-201501] p0232 N81-32862
Procedures for evaluating nonperturbing temperature probes in microwave fields
[PB81-205882] p0239 N81-33813

C

CALIFORNIA UNIV., BERKELEY.
Theoretical foundations for quantitative paleogenetics. III - The molecular divergence of nucleic acids and proteins for the case of genetic events of unequal probability
p0047 A81-17923
The estimation of genetic divergence
p0161 A81-40200
Recent progress in exobiology and planetary biology
[IAF PAPER 81-308] p0219 A81-47447
Scaling of metabolic rate on body mass in small laboratory mammals
p0220 A81-47894
Thyroid function at high altitude in the monkey, Macacanemestrina
p0056 N81-15657
Identification of the human lower extremity in torsion
p0058 N81-15670
Neuroendocrine strategies for adaptation to high altitude
p0073 N81-16717
Effects of the Cosmos 1129 Soviet paste diet on body composition in the growing rat
[NASA-CR-164725] p0209 N81-31810
CALIFORNIA UNIV., BERKELEY. LAWRENCE BERKELEY LAB.
Charge separation in the light reactions of photosynthesis
[LBL-11449] p0057 N81-15665
Theoretical and observational analysis of individual ionizing particle effects in biological tissue
[LBL-11147] p0099 N81-19765
Human comfort and auxiliary control considerations in passive solar structures
[SERI/TR-721-823] p0100 N81-19773
Ionizing radiation risks to Satellite Power Systems (SPS) workers in space
[DOE/ER-0094] p0135 N81-22694
Semiconductor detectors for medical tomography with high-energy heavy ions
[LBL-11037] p0137 N81-23790
Effects on biological systems of reflected light from a satellite power system
[NASA-CR-164586] p0187 N81-28739
Cataract production in mice by heavy charged particles
[NASA-CR-164599] p0190 N81-29738
Radiation biophysics research
[LBL-11700] p0209 N81-31811
Theoretical and observational analysis of individual ionizing particle effects in biological tissue
[LBL-11147-REV] p0230 N81-32847
Biological effects of high DC magnetic fields
[DE81-028904] p0230 N81-32848
CALIFORNIA UNIV., DAVIS.
Deposition and clearance of inhaled aerosols
[UCD-472-503] p0036 N81-13630
Studies on the effects of radiation on human lymphocytes
p0036 N81-13634
Preliminary report on small group factors in long duration space flights: Review and directions for future research
[NASA-CR-152385] p0094 N81-18650

Preliminary report on social psychological
factors in long duration space flights:
Review and directions for future research
[NASA-CR-152382] p0095 N81-18653
Environmental assessment for the Satellite Power
System (SPS): Studies of honey bees exposed
to 2.45 GHz continuous wave electromagnetic
energy
[NASA-CR-164223] p0133 N81-22679

CALIFORNIA UNIV., IRVINE.
Development of guayule (Parthenium argentatum)
research in cell culture
[NASA-CR-163945] p0077 N81-17691
Direct exposure of monolayers of mammalian cells
to airborne pollutants in a unique culture
system
[AD-A094785] p0097 N81-19750
Toxic hazards research unit
[AD-A091617] p0149 N81-24719
Hydrazine effects on vertebrate cells in vitro
p0172 N81-27795

CALIFORNIA UNIV., LA JOLLA.
Reasons for the occurrence of the twenty coded
protein amino acids
p0202 A81-45496

CALIFORNIA UNIV., LIVERMORE. LAWRENCE LIVERMORE LAB.
Design and fabrication of a portable minicuvette
system for measuring leaf photosynthesis and
stomatal conductance under controlled conditions
[UCRL-52895] p0097 N81-19752

CALIFORNIA UNIV., LOS ANGELES.
Microfossil-like objects from the Archaean of
Greenland - A cautionary note

USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 5, 1980
[JPRS-76727] p0011 N81-10663
Fluid-electrolyte homeostasis and weightlessness
p0011 N81-10664
Problems and prospects of space pharmacology
p0011 N81-10665
Biorhythmological status as one of the criteria for cosmonaut screening
p0011 N81-10666
Study of the combined effect of antiorthostatic position and LBNP on man's tracking accuracy and spatial orientation
p0011 N81-10667
Circulatory reactions of first crew of the Salyut-6 orbital test with LBNP
p0011 N81-10668
Dynamics of diastolic phase structure during a 140 day space flight
p0011 N81-10669
Results of inflight electrocardiographic studies of Salyut-5 crew
p0012 N81-10670
Functional asymmetry of operator performance
p0012 N81-10671
Effect of some factors that simulate space flights on blood plasma levels of free and protein-bound 11-hydroxycorticosteroids
p0012 N81-10672
Renal function and gluCOrticoid activity of the adrenal cortex during immersion
p0012 N81-10673
Erythrocyte balance during 182-day hypokinesia
p0012 N81-10674
Effect of prolonged antiorthostatic position on cardiac bioelectrical activity according to EKG tracings from corrected orthogonal leads
p0012 N81-10675
Vestibular nystagmus in rats after hypokinesia and prolonged rotation
p0012 N81-10676
Effect of exercise, vitamin and mineral supplements on reproductive function of albino rats during prolonged hypokinesia
p0013 N81-10677
Studies of central and regional hemodynamics by isotope and impedance methods during LBNP
p0013 N81-10678
Changes in main parameters of human hemodynamics with lower body compressed in a G suit
p0013 N81-10679
Automatic control of gas exchange in the autotrophic component of a life support system for heterotrophic organisms
p0013 N81-10680
Use of ultraviolet instrument for monitoring the quality of reclaimed drinking water
p0013 N81-10681
Method for producing clinostatic hypokinesia in monkeys
p0013 N81-10683
Certain personality characteristics as related to success of pilot training
p0014 N81-10684
Bioastronautics yesterday, today and tomorrow
p0014 N81-10685
USSR Report: Space Biology and Aerospace Medicine, volume 15, no. 1
[JPRS-77513] p0116 N81-21735
Pharmacological agents for the prevention and treatment of motion sickness
p0116 N81-21736
Results of studies of vestibular function and spatial perception in the crews of the first and second expeditions aboard Salyut-6 station
p0116 N81-21737
Results of vectorcardiographic examinations during and after long term space flights aboard the Salyut-6-Soyuz orbital complex
p0116 N81-21738
Conformity with human requirements of protein contained in the rations for crews of the Salyut-6 orbital station
p0117 N81-21739
State of cosmonauts' adrenohypophyseal system following orbital flights of different duration
p0117 N81-21740
Effects of space flights on lymphocyte blast transformation in cosmonauts' peripheral blood
p0117 N81-21741
Changes in body mass of cosmonauts in the course of a 140-day space flight
p0117 N81-21742
Study of mass-inertia characteristics of human body segments during 6-month hypokinesia by the gamma scanning method
p0117 N81-21743
Chemical composition of mineral component of human vertebrae and calcaneus after hypokinesia
p0117 N81-21744
Effect of remaining briefly in orthostatic and antiorthostatic positions on man's tracking performance
p0118 N81-21745
State of peripheral blood as related to altered diet and stress
p0118 N81-21746
Efficacy of alimentary factors in the recovery period following long-term antiorthostatic hypokinesia
p0118 N81-21747
Effect of level of motor activity on aerobic efficiency in healthy man
p0118 N81-21748
Regional analgesia by conduction anesthesia and reflex therapy in the acute recovery period following antiorthostatic hypokinesia
p0118 N81-21749
Accelerations affecting man in stormy weather
p0118 N81-21750
Study of human vestibular reactions to simulated periodic ship rolling
p0118 N81-21751
Human color discrimination during vestibular stimulation after exposure to bright light
p0119 N81-21752
Effect of specific volume on formation of atmosphere in sealed compartments
p0119 N81-21753
Effect of space flight factors on ultrastructure of skeletal muscles
p0119 N81-21754
Ultrastructure of the myocardium of rats flown aboard the Cosmos-936 biosatellite
p0119 N81-21755
Phosphatase activity of rat antebrachical bones after flight aboard the Cosmos-936 biosatellite
p0119 N81-21756
Chemical composition of mineral component of rabbit bones as related to 30-day hypokinesia
p0119 N81-21757
Effect of hyperbaric nitrogen and oxygen atmosphere on activity of respiratory center
p0119 N81-21758
USSR Report: Space Biology and Aerospace Medicine, vol. 14, no. 6
[JPRS-77311] p0183 N81-26699
Maximum oxygen uptake as a criterion of human resistance to hypoxia, pyoerthermia and hypothermia

p0183 N81-28700
Study of hemodynamics and phase structure of cardiac cycle in second crew of the Salyut-6 orbital station at rest
p0183 N81-28701
Changes in hemoglobin mass during real and simulated space flights
p0183 N81-28702
Theoretical left ventricular ejection period in weightlessness
p0183 N81-28703
Sleep distinctions, circadian rhythm of physiological functions and efficiency of man on first day after shift in sleeping-waking cycle
p0183 N81-28704
Histamine and serotonin levels in man in the presence of nervous-emotional stress
p0183 N81-28705
Motor activity of man when it is artificially restricted
p0184 N81-28706
Morphological changes in different types of rat muscle fibers during long-term hypokinesia
p0184 N81-28707
Corticosteroid content of rat adrenals in the presence of hypokinesia combined with graded physical exercise
p0184 N81-28708
Comparative efficacy of various biologically active compounds during exercise
p0184 N81-28709
Changes in animal reactivity under the influence of prolonged rotation
p0184 N81-28710
Effect of simulated gravity on the chick embryo myocardium
p0184 N81-28711
Relationship between pulsed filling of earlobe vessels and cardiac extrasystole during head-pelvis accelerations after exposure to simulated weightlessness
p0184 N81-28712
External respiration in the presence of hyperbaric oxygenation
p0184 N81-28713
Respiratory reactions to changes in gas environment density at different rates of inspiratory flow
p0185 N81-28714
The toxic effect of insignificant oxygen excess in an artificial gas atmosphere
p0185 N81-28715
Results of heat transfer-1 experiment conducted aboard the Cosmos-936 biosatellite
p0185 N81-28716
A device for studying the turning reflex in small laboratory animals
p0185 N81-28717
Effect of ionized air environment on human hormonal systems
p0185 N81-28718
Study of mouse mortality after exposure to helium ions with administration of tilorone
p0185 N81-28719
Seasonal changes in leukocyte count and phagocytic activity of leukocytes in individuals working in a closed environment
p0185 N81-28720
Perception of instrument data as related to flying experience
p0185 N81-28721

# PUBLIC COLLECTIONS OF NASA DOCUMENTS

## DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

**CALIFORNIA**
University of California, Berkeley
**COLORADO**
University of Colorado, Boulder
**DISTRICT OF COLUMBIA**
Library of Congress
**GEORGIA**
Georgia Institute of Technology, Atlanta
**ILLINOIS**
The John Crerar Library, Chicago
**MASSACHUSETTS**
Massachusetts Institute of Technology, Cambridge
**MISSOURI**
Linda Hall Library, Kansas City
**NEW YORK**
Columbia University, New York
**OKLAHOMA**
University of Oklahoma, Bizzell Library
**PENNSYLVANIA**
Carnegie Library of Pittsburgh
**WASHINGTON**
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

**CALIFORNIA**
Los Angeles Public Library
San Diego Public Library
**COLORADO**
Denver Public Library
**CONNECTICUT**
Hartford Public Library
**MARYLAND**
Enoch Pratt Free Library, Baltimore
**MASSACHUSETTS**
Boston Public Library

Toledo and Lucas County Public Library
**TEXAS**
Dallas Public Library
Fort Worth Public Library
**WASHINGTON**
Seattle Public Library
**WISCONSIN**
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

## EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

## A CONTINUING BIBLIOGRAPHY WITH INDEXES

## (Supplement 229)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in January 1982 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1982
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $7.00 domestic; $14.00 foreign.

# INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 109 reports, articles and other documents announced during January 1982 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1982 Supplements.

# AVAILABILITY OF CITED PUBLICATIONS

## IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

## STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

A82-11607 # The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti). A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

## IAA ENTRIES

**A82-10139 # A methodology for decision augmentation system design.** W. Zachary (Analytics, Inc., Willow Grove, PA) and J. Hopson (U.S. Naval Air Development Center, Warminster, PA). In: Computers in Aerospace Conference, 3rd, San Diego, CA, October 26-28, 1981, Collection of Technical Papers.
New York, American Institute of Aeronautics and Astronautics, 1981, p. 470-476. (AIAA 81-2201)

The domain of Decision Augmentation Systems (DAS) is composed of two general classes of systems, including decision automata and decision support systems. Problems in DAS design are examined, and the structure and organization of the DAS design framework are considered. The steps in designing a decision augmentation system are discussed, taking into account aspects of problem definition/decomposition, questions of problem aidability determination, automation level identification, decision function allocation, augmentation algorithmic technique selection, information sharing specification, and man/computer interface specification. Guidelines for DAS engineering are examined, giving attention to situation definition/decomposition guidelines, situation aidability determination guidelines, augmentation level identification guidelines, decision function allocation guidelines, technique selection guidelines, and information sharing specification guidelines. G.R.

**A82-10560 Are the 3,800-Myr-old Isua objects microfossils, limonite-stained fluid inclusions, or neither.** E. Roedder (U.S. Geological Survey, Reston, VA). *Nature,* vol. 293, Oct. 8, 1981, p. 459-462. 19 refs.

The nature of the yeast fossil-like ovoid and elliptical objects found in the 3800-million-year-old Isua supracrustal belt of southwest Greenland is discussed. Based on considerations of the deformation of the host material, the distribution of the clear and brown objects, the crystal nature of most of the clear objects, the nature of the actual fluid inclusions present, the distribution of the objects at the quartz grain boundaries and the solubility of the brown material in HCl, it is argued that the brown objects represent limonite-stained cavities from the otherwise complete dissolution by weathering of ferruginous dolomite grains. Additional evidence presented by Bridgwater et al. (1981) in support of the fluid inclusion nature of the brown and clear objects and by Pflug et al. (1978, 1979) in support of the fossil nature of the brown objects are interpreted as ambiguous. It is pointed out, however, that although the present objects can not be regarded as Precambrian fossils, it should be possible to find organic matter trapped within single crystals. A.L.W.

**A82-10630 Progress in computer analysis of the exercise electrocardiogram.** V. Bhargava, K. Watanabe, and V. F. Froelicher (California, University, San Diego, CA). *American Journal of Cardiology,* vol. 47, May 1981, p. 1143-1151. 34 refs. Grant No. NIH-HL-17682.

The development of digital computer techniques for the analysis of exercise electrocardiographic data is reviewed. Early computer studies concerned with the quantitative study of the Frank lead exercise electrocardiogram and the computerized measurement of the S-T index, S-T integral, S-T spatial magnitude and direction, S-T segment magnitude 60 ms after the end of the QRS complex, and the parameters of the Weiner et al. (1978) program are discussed, and commercial on-line exercise data processing systems and their applications in automated exercise electrocardiographic analysis, the development of a treadmill exercise score and the validation of S-T segment criteria for ischemia are examined. The theoretical aspects of the procedures used in digital processing are then considered, with attention given to analog to digital conversion, the mathematical constructs employed in processing, noise reduction, signal averaging, the data sampling window, spatial analysis based on S-T segment vectors and calibration based on with exercise radionuclide studies of myocardial perfusion and function. It is predicted that computerized exercise electrocardiography will become ubiquitous in the next decade due to revolutionary advances in microcomputers. A.L.W.

**A82-10631 Evaluation of abnormal exercise electrocardiogram in apparently healthy subjects - Labile repolarization /ST-T/ abnormalities as a cause of false positive responses.** P. L. McHenry, H. W. Richmond, B. L. Weisenberger, J. S. Rodway, G. F. Perry, and J. W. Jordan (Indiana University, Indianapolis, IN). *American Journal of Cardiology,* vol. 47, May 1981, p. 1152-1160. 16 refs. Research supported by the Herman C. Krannert Fund and American Heart Association; Grants No. NIH-HL-06308; No. NIH-HL-07182.

The significance of abnormal S-T segment responses in exercise electrocardiography of apparently healthy subjects is investigated based on a longitudinal study of 121 subjects. Men with a normal 12-lead electrocardiogram and normal heart size who were referred because of abnormal S-T segment responses to treadmill exercise testing were tested for labile ST-T wave abnormalities before and after hyperventilation, then underwent symptom-limited treadmill exercise testing in the fasting state during initial evaluation and in a follow-up period lasting up to 66 months. A tendency toward labile S-T or T wave abnormalities was noted in 61 of the subjects, of whom only one experienced a new coronary event, while of the remaining 60 subjects 34 exhibited significant coronary artery disease. A considerable variability in the appearance of labile ST-T wave changes and abnormal S-T segment responses to exercise is also observed. Statistical analysis of the records of 35 subjects without labile ST-T abnormalities has identified a set of criteria to distinguish true positive from false positive responses with a specificity of 82%, a sensitivity of 92% and a predictive value of 90%. A review of patient records also indicated that a serial conversion from a normal to an abnormal S-T segment response was not more predictive of coronary artery disease than an initially abnormal result. A.L.W.

**A82-10632 Variations in normal electrocardiographic response to treadmill testing.** V. F. Froelicher, R. Wolthuis, J. Fischer, and G. Uhl (USAF, School of Aerospace Medicine, Brooks AFB, TX; Medtronics, Inc.; California, University, San Diego, CA). *American Journal of Cardiology,* vol. 47, May 1981, p. 1161-1167. 25 refs.

Forty healthy young men at low risk for coronary artery disease underwent progressive maximal treadmill testing. Four bipolar electrocardiographic leads including CM5, CC5, inferior-superior Y, anterior-posterior Z, and a standard V5 were recorded and later computer-processed. Measurements included amplitudes of the Q, R, S, J junction and T wave, R-T and U-S intervals and S-T segment slope. These variables are presented as the 10th, 50th (median) and 90th percentiles throughout the testing procedure to define reference values for the electrocardiographic response to maximal treadmill testing. The medians are presented graphically so that the exercise-induced changes can be visualized. In addition, the percent change of R wave amplitude in V5 compared with the supine pretest value is displayed for each subject during and after testing. (Author)

**A82-10633 Computer quantitation of Q-T and terminal T wave /aT-eT/ intervals during exercise - Methodology and results in normal men.** J. O'Donnell, S. B. Knoebel, D. E. Lovelace, and P. L. McHenry (Indiana University; U.S. Veterans Administration Medical Center, Indianapolis, IN). *American Journal of Cardiology*, vol. 47, May 1981, p. 1168-1172. 19 refs. Research supported by the Herman C. Krannert Fund and American Heart Association; Grants No. NIH-HL-06308; No. NIH-HL-07182.

The methods and results of a computerized study of the Q-T interval and T wave of resting and exercise electrocardiograms obtained from normal men are presented. Treadmill exercise tests were performed using a modified Balke protocol in 130 clinically normal men and 25 consecutive QRS-T complexes from standing rest and three exercise stages were computer averaged; measurements of the Q-T interval, the ratio of the Q-T interval to the corrected Q-T interval, and the apex to end of T interval (aT-eT interval) were then made manually and by computer. No significant differences are observed between any of the visual and computer-generated Q-T and aT-eT interval measurements in the X or Z axis leads, although the computer-quantitated measurements in the Z axis lead were systematically longer than those made from the X axis lead. During submaximal exercise, in 63% of the subjects, the Q-T ratio is found to be consistently greater than 1.08, a value previously taken to be a reliable indicator of heart disease. The aT-eT interval is not observed to be dependent on either age or heart rate, indicating that it might be used as a specific indicator of repolarization alterations that occur with myocardial ischemia. A.L.W.

**A82-10749 † Analysis of lung vasomotor responses to alveolar hypoxia and hypercapnia (Analiz, vazomotornykh otvetov v legkikh na alveoliarnuiu gipoksiiu i giperkapniiu).** D. P. Dvoretskii (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 67, Aug. 1981, p. 1229-1236. 25 refs. In Russian.

The response of pulmonary vessels and the resulting hemodynamics to conditions of reduced oxygen pressure and elevated carbon dioxide in the inspired air are investigated. Experiments measuring the effectiveness of alveolar hypoxia and hypercapnia in increasing pulmonary blood flow resistance, the dependence of vascular responses on blood pH at various alveolar ventilation volumes and the response threshold of pulmonary vessels to hypoxic and hypercapnic stimuli were performed in anesthetized cats under artificial respiration. Results confirm a previously observed inverse relationship between the magnitude of blood flow reduction in lung regions ventilated by hypoxic or hypercapnic gas mixtures and the relative mass of the lung region exposed. An inhibition in vasoconstriction in lung regions hyperventilated with a hypoxic gas mixture is observed which is interpreted as a result of a shift in blood pH toward alkalosis in the zone of respiratory gas diffusion. It is proposed that pulmonary gas exchange is thus a function of respiratory dead space. A.L.W.

**A82-10750 † Glucocorticoid receptors and metabolic disturbances in the liver and heart during immobilization (Gliukokortikoidnye retseptory i metabolicheskie narusheniia v pecheni i serdtse pri immobilizatsii).** A. I. Bobkov and V. P. Kisliakova (Ministerstvo Zdravookhraneniia SSSR, Laboratoriia Radiatsionnoi Endokrinologii, Moscow, USSR). *Fiziologicheskii Zhurnal SSSR*, vol. 67, Aug. 1981, p. 1258-1264. 15 refs. In Russian.

The characteristics of the intracellular steroid-receptor interaction and the resultant cellular metabolism of the heart and liver during the compensation and decompensation phases of immobilization stresses are investigated. Determinations of the binding of dexamethasone and corticosterone to cytoplasmic receptors, receptor dissociation constant and binding sites, corticosterone levels, tyrosine aminotransferase activity and metabolite levels in the blood plasma and cytosol were made for 20 rats immobilized on their backs for periods from 30 min to 2 days. A significant increase in plasma and tissue endogeneous glucocorticoid levels accompanied by decreases in glucocorticoid receptor binding and tyrosine aminotransferase activity, a depletion in cellular glucose and cholesterine reserves, a decrease in total plasma and cytosol protein, an increase in plasma and tissue urea and a significant hyponatremia are found to characterize the transition of the stress from the compensated to the decompensated phase. A.L.W.

**A82-10897 * # Development status of a preprototype water electrolysis subsystem.** R. B. Martin (NASA, Johnson Space Center, Crew Systems Div., Houston, TX) and A. C. Erickson (General Electric Co., Wilmington, MA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-9.* 8 p. Members, $2.00; nonmembers, $4.00.

A preprototype water electrolysis subsystem was designed and fabricated for NASA's advanced regenerative life support program. A solid polymer is used for the cell electrolyte. The electrolysis module has 12 cells that can generate 5.5 kg/day of oxygen for the metabolic requirements of three crewmembers, for cabin leakage, and for the oxygen and hydrogen required for carbon dioxide collection and reduction processes. The subsystem can be operated at a pressure between 275 and 2760 kN/sq m and in a continuous constant-current, cyclic, or standby mode. A microprocessor is used to aid in operating the subsystem. Sensors and controls provide fault detection and automatic shutdown. The results of development, demonstration, and parametric testing are presented. Modifications to enhance operation in an integrated and manned test are described. Prospective improvements for the electrolysis subsystem are discussed. (Author)

**A82-10898 * # Application of improved technology to a preprototype vapor compression distillation /VCD/ water recovery subsystem.** K. L. Johnson (Lockheed Missiles and Space Co., Inc., Biotechnology Div., Sunnyvale, CA), R. P. Reysa (Boeing Co., Houston, TX), and D. H. Fricks (NASA, Johnson Space Center, Houston, TX). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-10.* 9 p. Members, $2.00; nonmembers, $4.00.

Vapor compression distillation (VCD) is considered the most efficient water recovery process for spacecraft application. This paper reports on a preprototype VCD which has undergone the most extensive operational and component development testing of any VCD subsystem to date. The component development effort was primarily aimed at eliminating corrosion and the need for lubrication, upgrading electronics, and substituting nonmetallics in key rotating components. The VCD evolution is documented by test results on specific design and/or materials changes. Innovations worthy of further investigation and additional testing are summarized for future VCD subsystem development reference. Conclusions on experience gained are presented. (Author)

**A82-10899 * # Development of an advanced Sabatier CO2 reduction subsystem.** G. N. Kleiner (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT) and R. J. Cusick (NASA, Johnson Space Center, Crew Systems Div., Houston, TX). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-11.* 7 p. Members, $2.00; nonmembers, $4.00.

A preprototype Sabatier CO2 reduction subsystem was successfully designed, fabricated and tested. The lightweight, quick starting (less than 5 minutes) reactor utlizes a highly active and physically durable methanation catalyst composed of ruthenium on alumina. The use of this improved catalyst permits a simple, passively controlled reactor design with an average lean component H2/CO2 conversion efficiency of over 99% over a range of H2/CO2 molar ratios of 1.8 to 5 while operating with process flows equivalent to a crew size of up to five persons. The subsystem requires no heater operation after start-up even during simulated 56 minute lightside/39 minute darkside orbital operation. (Author)

**A82-10900 # A regenerative life support system for Space Operations Center /SOC/ - A probable first flight application.** H. F. Brose (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-12.* 8 p. Members, $2.00; nonmembers, $4.00.

The Space Operations Center is an earth-orbiting spacecraft which will be used to test the hardware of a regenerative life support system. This will be the first flight application for the regenerative equipment for recycling oxygen and water and the Environmental Control and Life Support (ECLS) equipment. The ECLS performance requirements (partial pressures, temperature, ventilation, water), design average loads, and required major equipment are presented in detail. The SOC habitat configuration will be designed to provide the crew a safe and comfortable environment in which to perform tasks. Ceiling and floor panels will be removable for access to the air and water processing equipment; the equipment will be packaged so that the components are not more than one layer deep with adequate perimeter access. The ECLS control and display system will provide the information required for easy operation and maintainability, as well as train crew members in the equipment operation. J.F.

A82-10907 * # **Treatment of CELSS and PCELSS waste to produce nutrients for plant growth.** M. Modell, H. Meissner, M. Karel (MIT, Cambridge, MA), J. Carden, and S. Lewis (Georgia Institute of Technology, Atlanta, GA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-19.* 6 p. Members, $2.00; nonmembers, $4.00. NASA-supported research.

The research program entitled 'Development of a Prototype Experiment for Treating CELSS (Controlled Ecological Life Support Systems) and PCELSS (Partially Controlled Ecological Life Support Systems) Wastes to Produce Nutrients for Plant Growth' consists of two phases: (1) the development of the neccessary facilities, chemical methodologies and models for meaningful experimentation, and (2) the application of what methods and devices are developed to the interfacing of waste oxidation with plant growth. Homogeneous samples of freeze-dried human feces and urine have been prepared to ensure comparability of test results between CELSS waste treatment research groups. A model of PCELSS food processing wastes has been developed, and an automated gas chromatographic system to analyze oxidizer effluents was designed and brought to operational status. Attention is given the component configuration of the wet oxidation system used by the studies. O.C.

A82-10908 * # **The potential role of aerobic biological waste treatment in regenerative life support systems.** M. L. Shuler, D. Nafis, and E. Sze (Cornell University, Ithaca, NY). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-20.* 16 p. 12 refs. Members, $2.00; nonmembers, $4.00. Grant No. NsG-2408.

The purpose of the paper is to make a preliminary assessment of the feasibility of using aerobic biological waste treatment in closed systems. Issues that are addressed in this paper are: (1) how high a degree of material balance is possible, (2) how much might such a system weigh, and (3) how would system closure and weight be affected if animals were included in the system. A computer model has been developed to calculate for different scenarios the compositions and amounts of the streams entering or leaving the waste treatment system and to estimate the launch weight of such a system. A bench scale apparatus has been built to mimic the proposed waste treatment system; the experiments are used to verify model predictions and to improve model parameter estimations. (Author)

A82-10909 * # **Ion-exchange chromatography separation applied to mineral recycle in closed systems.** E. Ballou, L. A. Spitze, F. W. Wong (San Jose State University, San Jose, CA), T. Wydeven, and C. C. Johnson (NASA, Ames Research Center, Moffett Field, CA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-21.* 7 p. 10 refs. Members, $2.00; nonmembers, $4.00.

As part of the controlled ecological life support system (CELSS) program, a study is being made of mineral separation on ion-exchange columns. The purpose of the mineral separation step is to allow minerals to be recycled from the oxidized waste products of plants, man, and animals for hydroponic food production. In the CELSS application, relatively large quantities of minerals in a broad concentration range must be recovered by the desired system, rather than the trace quantities and very low concentrations treated in analytical applications of ion-exchange chromatography. Experiments have been carried out to assess the parameters pertinent to the scale-up of ion-exchange chromatography and to determine feasibility. Preliminary conclusions are that the column scale-up is in a reasonable size range for the CELSS application. The recycling of a suitable eluent, however, remains a major challenge to the suitability of using ion exchange chromatography in closed systems. (Author)

A82-10910 * # **Wet oxidation as a waste treatment in closed systems.** B. L. Onisko and T. Wydeven (NASA, Ames Research Center, Moffett Field, CA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-22.* 5 p. 11 refs. Members, $2.00; nonmembers, $4.00.

The chemistry of the wet oxidation process has been investigated in relation to production of plant nutrients from plant and human waste materials as required for a closed life-support system. Hydroponically grown lettuce plants were used as a model plant waste and oxygen gas was used as oxidant. Organic nitrogen content was decreased 88-100% depending on feed material. Production of ammonia and nitrogen gas account for all of the observed decrease in organic nitrogen content. No nitrous oxide (N2O) was detected. The implications of these results for closed life-support systems are discussed. (Author)

A82-10911 * # **Generic waste management requirements for a controlled ecological life support system /CELSS/.** T. Hoshizaki and B. D. Hansen, III (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-23.* 7 p. 12 refs. Members, $2.00; nonmembers, $4.00. Contract No. NAS7-100.

Regenerative life support systems for future space missions will require closure of the waste-food loop. Each mission application will generate specific requirements for the waste management system. However, there are generic input and output requirements that can be identified when a probable scenario is chosen. This paper discusses the generic requirements when higher plants are chosen as the primary food source. Attention is focused on the quality and quantity of nutrients necessary for culturing higher plants. The types of wastes to be processed are also discussed. In addition, requirements generated by growing plants on three different substrates are presented. This work suggests that the mineral composition of waste materials may require minimal adjustment to satisfy the plant requirements. (Author)

A82-10912 * # **Preprototype Vapor Compression Distillation Subsystem development.** C. D. Thompson (NASA, Johnson Space Center, Houston, TX), G. S. Ellis, and F. H. Schubert (Life Systems, Inc., Cleveland, OH). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAS-25.* 9 p. 9 refs. Members, $2.00; nonmembers, $4.00.

Vapor Compression Distillation (VCD) has evolved as the most promising approach to reclaim potable water from wastewater for future long-term manned space missions. Life Systems, Inc. (LSI), working with NASA, has developed a preprototype Vapor Compression Distillation Subsystem (VCDS) which processes wastewater at 1.4 kg/h. The preprototype unit weighs 143 kg, occupies a volume of 0.47 cu m, and will reclaim 96 percent of the available wastewater. This unit has been tested by LSI and is scheduled for further testing at NASA-JSC. This paper presents the preprototype VCDS design, configuration, performance data, test results and flight system projections. (Author)

A82-10913 # **Lightside atmospheric revitalization system for Space Shuttle Orbiter.** J. R. Nason and A. K. Colling, Jr. (United Technologies Corp., Hamilton Standard Div., Windsor Locks, CT). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-26.* 9 p. Members, $2.00; nonmembers, $4.00.

Lightside Atmospheric Revitalization System (LARS) is a regenerable cabin life support system that can be used for extended duration Orbiter missions. A majority of the system's power usage occurs on the light side of an orbit where power is provided by solar cells. It would replace the baseline lithium hydroxide (LiOH) carbon dioxide removal subsystem, thus eliminating expendables required for carbon dioxide removal. Both oxygen and water required for crew consumption are also conserved. The system consists of three subsystems: a solid amine water desorbed (SAWD) regenerable carbon dioxide removal subsystem, a water vapor electrolysis (WVE) oxygen generating subsystem, and a Sabatier reactor carbon dioxide reduction subsystem. This paper presents a description of LARS, a performance evaluation, and trade-off results compared against the baseline Orbiter LiOH system. (Author)

**A82-10914 * #** **Nitrogen supply system based on hydrazine dissociation.** D. B. Heppner (Life Systems, Inc., Cleveland, OH) and P. D. Quattrone (NASA, Ames Research Center, Moffett Field, CA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-27.* 6 p. 8 refs. Members, $2.00; nonmembers, $4.00.

Future long-duration manned space missions will require a method of generating N2 for cabin leakage makeup and repressurization. Life Systems, working with NASA, is developing a Nitrogen Supply Subsystem (NSS) based on the dissociation of N2H4 into a mixture of H2 and N2. The latter is separated to provide the makeup N2. Recent advances in specific hardware developments have resulted in the design and fabrication of a nominal 3.6 kg/day N2 generation module. The design integrates a N2H4 catalytic dissociator, three ammonia (NH3) dissociation stages and four H2 seperation stages into a 33 kg, 14 cu dm module. A technique has been devised to alternate the NH3 dissociation and H2 separation stages to give high N2 purity in the product stream. Tests have shown the product stream to contain less than 0.5 percent H2 and 20 ppm NH3. This paper discusses the development and test activities of the NSS program. It reviews the design, configuration, operation and projected performance characteristics of a 4.4 kg/day NSS suitable for NASA's planned Space Operations Center. (Author)

**A82-10915 * #** **Regenerable CO2 collection for spacecraft application.** N. Lance, Jr. (NASA, Johnson Space Center, Houston, TX) and F. H. Schubert (Life Systems, Inc., Cleveland, OH). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-28.* 8 p. 15 refs. Members, $2.00; nonmembers, $4.00.

The design of the CS-3, a three-person capacity preprototype CO2 collection subsystem, is described. It is noted that the function of the CS-3 is to remove metabolically produced CO2 from the Spacelab cabin to maintain atmospheric pCO2 at 400 Pa or less. Results are presented of an extensive parametric/endurance test program characterizing the subsystem's performance. The results demonstrate the suitability of the electrochemical depolarized CO2 concentration concept for possible use in the Space Operations Center. The CS-3 is found to meet or exceed all Regenerative Life Support Evaluation requirements. Specifically, the 0.13 cu m, 46 kg subsystem is able to remove CO2 at an equivalent rate of 3.4 persons from an air stream having a pCO2 of 400 Pa. C.R.

**A82-10921 * #** **Unconventional processes for food regeneration in space - An overview.** B. O. Stokes, G. R. Petersen, W. W. Schubert, and W. A. Mueller (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-35.* Members, $2.00; nonmembers, $4.00. NASA-supported research.

Alternatives to conventional plant agriculture for the regeneration of food during space missions of extended duration are examined. The options considered, which may be used in combination with conventional agriculture, include the production of food from plant wastes, the chemical synthesis of food from carbon dioxide and other simple molecules or the substitution of edible chemicals, and the use of microrganisms for food and oxygen regeneration, with suitable processing. A comparison of solar energy conversion efficiencies is presented for nonphotosynthetic bacteria grown on hydrogen and algal systems photosynthetically, and it is shown that hydrogen bacteria are potentially more attractive than photosynthetic algae using artificial light. Weight-volume requirements for the conventional plant, algae and hydrogen bacteria systems are also compared to demonstrate the advantages of microbial systems. A.L.W.

**A82-10922 * #** **The CELSS program - An overview of its structure and use of computer modelling.** M. M. Averner (New Hampshire, University, Durham, NH) and R. D. Macelroy (NASA, Ames Research Center, Moffett Field, CA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-36.* 3 p. Members, $2.00; nonmembers, $4.00.

NASA has initiated a research program, CELSS, directed at the acquisition of the knowledge and technology required for the development of an autonomous, regenerative life support system. The program is structured to promote effective, cooperative research in fundamental, applied and engineering science. The initial research thrusts involve investigations into problems of food production, waste processing and system control and integration. In the area of food production both conventional, higher plant-based processes as well as chemosynthetic food production technologies are being investigated. Alternative waste processing procedures, both biological and physicochemical, are being examined. Computer based modelling as an aid to design and analysis is an integral part of the approach to system control and management. A mass balance model depicting the flow of elemental mass in a conceptualized closed, regenerative life support system is described. (Author)

**A82-10923 * #** **A chamber design for closed ecological systems research.** H. Schwartzkopf and P. E. Stofan (New Hampshire, University, Durham, NH). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-37.* 5 p. 5 refs. Members, $2.00; nonmembers, $4.00. Grant No. NCC2-27.

A single-plant growth chamber is described which is closed with respect to nutrient and gas flows, in order to serve as a tool in the investigation of control over biological systems. Such control procedures are essential for the use of biological components in the development of a closed ecological life support system (CELSS). The chamber's design consists of two concentric clear plastic cylinders equipped with aeroponic feed tubing, a supporting platform for the plant and a set of sensors that includes an anemometer, thermistors, pressure and strain gauges, and humidity sensors. O.C.

**A82-10924 #** **An approach to the preliminary evaluation of Closed-Ecology Life Support System /CELSS/ scenarios and control strategies.** J. D. Stahr (Bolt Beranek and Newman, Inc., Cambridge, MA), D. M. Auslander, R. C. Spear, and G. E. Young (California, University, Berkeley, CA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-38.* 7 p. 19 refs. Members, $2.00; nonmembers, $4.00.

An approach to the problem of evaluating CELSS (Closed Ecology Life Support System) scenarios and different strategies within a scenario is presented. The approach combines probabilistic Monte Carlo simulation techniques with the notion of descriptors of system behavior to determine system performance. A simple CELSS model is developed along with two alternative control strategies. The approach is applied to this model to demonstrate the scope and limitations of the method. The simulations show that dynamic behavior and selection of control laws can be crucial to CELSS survival. (Author)

**A82-10925 * #** **Oxygen generation subsystem for spacecraft.** F. H. Schubert, K. A. Burke (Life Systems, Inc., Cleveland, OH), and P. D. Quattrone (NASA, Ames Research Center, Moffett Field, CA). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-40.* 9 p. 5 refs. Members, $2.00; nonmembers, $4.00.

Recovery of oxygen from water will be needed on future long-duration manned space missions. An oxygen generation subsystem (OGS) for NASA based on the alkaline electrolyte, static feed water electrolysis concept. Recent advances in hardware development have resulted in the design, fabrication and testing of a self-contained, one-person capacity OGS (WS-1). This subsystem consists of three major parts: a six-cell electrochemical module to generate the product O2, a coolant control assembly to maintain module temperature and a pressure controller which maintains product gas pressures. The subsystem provides 0. 82 kg/d O2 while operating at a current density of 206 mA/ sq cm, a temperature of 339 K and a pressure of 1240 kPa. (Author)

**A82-10927 * #** **Design and control strategies for CELSS - Integrating mechanistic paradigms and biological complexities.** B. Moore, III, R. Kaufmann, and C. Reinhold (New Hampshire, University, Durham, NH). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-43.* 7 p. Members, $2.00; nonmembers, $4.00. Grant No. NCC2-27.

Systems analysis and control theory consideration are given to simulations of both individual components and total systems, in order to develop a reliable control strategy for a Controlled Ecological Life Support System (CELSS) which includes complex biological components. Because of the numerous nonlinearities and tight coupling within the biological component, classical control theory may be inadequate and the statistical analysis of factorial experiments more useful. The range in control characteristics of particular species may simplify the overall task by providing an appropriate balance of stability and controllability to match species function in the overall design. The ultimate goal of this research is the coordination of biological and mechanical subsystems in order to achieve a self-supporting environment. O.C.

**A82-10929 * #** **Advanced Microbial Check Valve development.** G. V. Colombo, D. R. Greenley, D. F. Putnam (Umpqua Research Co., Myrtle Creek, OR), and R. L. Sauer (NASA, Johnson Space Center, Houston, TX). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, San Francisco, CA, July 13-15, 1981, Paper 81-ENAs-45.* 4 p. 12 refs. Members, $2.00; nonmembers, $4.00.

The Microbial Check Valve (MCV) is a flight qualified assembly that provides bacteriologically safe drinking water for the Space Shuttle. The 1-lb unit is basically a canister packed with an iodinated ion-exchange resin. The device is used to destroy organisms in a water stream as the water passes through it. It is equally effective for fluid flow in either direction and its primary method of disinfection is killing rather than filtering. The MCV was developed to disinfect the fuel cell water and to prevent back contamination of stored potable water on the Space Shuttle. This paper reports its potential for space applications beyond the basic Shuttle mission. Data are presented that indicate the MCV is suitable for use in advanced systems that NASA has under development for the reclamation of humidity condensate, wash water and human urine. (Author)

**A82-11026** **Hazards of chemicals used in agricultural aviation - A review.** H. R. Quentick and I. C. Perry. *Aviation, Space, and Environmental Medicine,* vol. 52, Oct. 1981, p. 581-5[illegible]. 21 refs.

Aerial agriculture is an industry growing in worldwide use, and will receive even more extensive use in the future where food is in short supply. The aircraft applicator, however, may be subject to the continuous exposure to toxic chemicals over the working season: dinitrophenols, carbamates, organochlorines, and organophosphates. Exposure may never reach an identifiable or detectable chemical level, but subtle behavior changes have been noted. It is recommended that the pilots and ground crews using these pesticides have their individual cholinesterase levels established at the start of the season and monitored at intervals. The recommended lowest levels in blood and plasma are tabulated for the various toxicity classes, and methods of decontamination are discussed. Electromyography is also introduced as a sensitive, quick, and reliable method for measuring toxicity levels. J.F.

**A82-11027** **A comparison between over-the-shoulder and computer-derived measurement procedures in assessing student performance in radar air traffic control.** J. O. Boone and J. A. Steen (FAA, Civil Aeromedical Institute, Oklahoma City, OK). *Aviation Space and Environmental Medicine,* vol. 52, Oct. 1981, p. 589-593. 5 refs.

Computer-derived measures (CDM) obtained at the Radar Training Facility in Oklahoma City were compared with over-the-shoulder evaluation (OSE) methods. Two sets of measures were taken: 20 CDMs and an OSE of student performance. It was concluded from regression models that CDMs predict a global rating criterion of potential ATC on-the-job success at least as well as OSE. Further, it was found that OSE is not as reliable as CDM; the CDMs, it appears, can substitute for the OSE ratings and be used to form a composite laboratory score. B.J.

**A82-11028** **Instructor pilot teaching behavior and student pilot stress in flight training.** G. S. Krahenbuhl, P. W. Darst, J. R. Marett, L. C. Reuther, S. H. Constable, M. E. Swinford, and G. B. Reid (Arizona State University, Tempe, AZ). *Aviation, Space, and Environmental Medicine,* vol. 52, Oct. 1981, p. 594-597. 22 refs. Contract No. F33615-78-C-0063.

The purpose of this study was to investigate the relationship between instructor pilot behavior and student pilot stress. Six instructor pilots and 12 undergraduate pilot training students served as subjects. Two students were assigned to each instructor. Ten categories of instructor pilot behavior were coded from audio cassette tapes made during four sorties from the initial instrument phase of undergraduate pilot training in the T-50 Instrument Flight Simulator. Behaviors were tallied and converted to a rate per minute; inter-recorder agreement was 87%. Instructors who relied heavily on acceptance and praise behaviors were placed in a positive group (N = 4), while those relying on criticism and scolding were placed in a negative group (N = 2). Student stress was estimated from timed urine samples used to quantify catecholamine excretion. Results indicated that missions in the T-50 Instrument Flight Simulator produced a significant stress response in the subjects and that the stress response was greater in lessons taught by the instructor pilots in the negative group. Ranade (Pennsylvania, University, Philadelphia, PA). *Aviation, Space, and Environmental Medicine,* vol. 52, Oct. 1981, p. 598-603. 46 refs. Grant No. NIH-HL-08899-15; Contract No. N00014-76-C-0248.

**A82-11030** **Lack of effect of pulsed ultrasound on the mammalian EEG.** A. Amin, K. R. Foster, S. Takashima (Pennsylvania, University, Philadelphia, PA), and J. Ternes (U.S. Veterans Administration Medical Center, Philadelphia, PA). *Aviation, Space, and Environmental Medicine,* vol. 52, Oct. 1981, p. 604-607. 6 refs. Research supported by the U.S. Veterans Administration; Contract No. N00014-76-C-0642.

Anesthetized rhesus monkeys and rabbits were exposed to pulsed ultrasound from a 1.8 cm diameter transducer placed against the head. Each ultrasonic exposure lasted 4 min; it consisted of a series of 1-2 microsec pulses, with a frequency spectrum broadly centered about the transducer resonant frequency of 1.5 MHz, repeated at a rate of 950 Hz. The time-averaged ultrasonic power was 12.6 mW, with an estimated peak power of about 15 W. No changes were observed in the EEG or its power spectrum during or immediately after the exposure. This contrasts with a previous report of significant changes in the EEG of squirrel monkeys during comparable exposures to pulsed ultrasound. Analysis of the earlier reported results suggests that some of the effects were due to aliasing artifacts. (Author)

**A82-11153** **Factors determining temporal pattern of isobaric supersaturation.** C. Young and B. G. D'Aoust (Virginia Mason Research Center, Seattle, WA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Oct. 1981, p. 852-857. 12 refs.

In connection with different uptake and elimination rates of inert gases in the body, it is possible to produce transient supersaturations in the body by changing the composition of the inspired gas. If this change occurs at a high pressure, the supersaturation can be sufficient to produce vascular bubbles. A calculation is performed concerning the maximum supersaturations which can occur after a gas exchange. The Krogh cylinder model of the tissues is employed in the analysis. In this model, the tissue is regarded as made up of parallel cylinders with capillaries down the center. To simplify conditions further, it is assumed that there is no gas barrier at the capillary wall. It is found that diffusion plays a role in the transient supersaturation only in long Krogh cylinders with high blood flows. Experiments show that the formation of vascular bubbles after a change of gas composition cannot be entirely explained by the different diffusion constants of the gases used. G.R.

**A82-11154** **Increased hemoglobin-oxygen affinity does not decrease skeletal muscle oxygen consumption.** B. K. Ross and M. P. Hlastala (Washington, University, Seattle, WA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Oct. 1981, p. 864-870. 23 refs. Grants No. NIH-HL-12174; No. NIH-HL-05372; No. NIH-HL-00182.

The considered investigation is concerned with the role which hemoglobin-oxygen affinity plays in oxygen delivery to tissues, taking into account studies based on the use of an isolated gracilis muscle preparation. A total of 40 mongrel dogs of either sex were employed in the investigation. The results obtained are significant for a definition of the relative importance of the position of the oxygen dissociation curve in gas exchange. It is concluded that the drop in tissue oxygen consumption observed with stored blood and a venous O2 partial pressure of over 40 torr must be due to some factor other than a critically low venous O2 partial pressure. However, the data do not allow a definition of the precise mechanism responsible for the decreased tissue oxygen consumption seen during perfusion with stored blood. G.R.

**A82-11155** **Endurance training in the rat. I - Myocardial mechanics and biochemistry.** D. O. Nutter, R. E. Priest, and E. O. Fuller (Emory University, Atlanta, GA). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 51, Oct. 1981, p. 934-940. 34 refs. Research supported by the Noble Foundation; Grant No. NIH-HL-16420.

Schaible and Scheuer (1979) have reported increased performance and contractility in isolated hearts from groups of rats trained by running as well as swimming. The current study was performed to further define the effect of endurance training produced by treadmill running, as well as detraining, in both young and adult male rats on myocardial mechanics, cardiac mass, and structural biochemistry. Rats undergoing exercise training were run on a treadmill 5 days/wk for 12 wk. A fixed 8% treadmill grade was used throughout training. The treadmill speed and the running interval were gradually increased over weeks 1-6 and then maintained at 0.82 mph and 60 min for weeks 7-12. It was found that moderate endurance training by treadmill running does not enhance the mechanical performance of the myocardium of either the young or adult rat. The training program did not appear to produce a significant degree of cardiac hypertrophy judging from absolute heart weight and myocardial fiber diameter. G.R.

**A82-11539** **Interaction of electromagnetic fields with biological bodies.** K.-M. Chen (Michigan State University, East Lansing, MI). In: Research topics in electromagnetic wave theory. (A82-11526 02-70) New York, Wiley-Interscience, 1981, p. 290-347. 49 refs. NSF Grant No. ENG-74-12603; Grant No. DAAG29-76-G-0201.

A generalized theory is developed for the interaction between an electromagnetic field and a finite heterogeneous body with arbitrary conductivity. The singularity and uniqueness problems associated with the dyadic Green's function in a conducting medium are examined. A numerical method based on an integral equation for the induced electric field inside a biological body irradiated by a far-zone electromagnetic field is applied to quantify the induced electric field and the absorbed power density inside a realistic model of man irradiated by various electromagnetic waves. A similar numerical method based on two coupled integral equations for the induced electric field inside a biological body and the induced current on an antenna is developed to study the coupling between a biological body and an electromagnetic source. Theoretical findings are verified experimentally. V.L.

**A82-11697** † **The significance of the respiratory minute volume index in the evaluation of vestibular stability (Znachenie pokazatelei minutnogo ob'ema dykhaniia pri otsenke vestibuliarnoi ustoichivosti).** A. S. Gusarov. *Voenno-Meditsinskii Zhurnal*, Aug. 1981, p. 48-50. In Russian.

The respiratory dynamics of persons of various vestibular stabilities undergoing Coriolis acceleration is investigated in order to assess the possibility of using respiratory minute volume in the evaluation of vestibular function. Respiratory rate, respiratory minute volume, heart rate and electrocardiography were monitored continuously in 100 men with healthy vestibular analyzers in a 5-min test of tolerance to cumulative Coriolis forces. Changes in respiratory parameters are observed to be correlated with levels of vestibular reaction to Coriolis acceleration. Rotational and especially post-rotational vestibulospirometry and vestibulospirography are found to be the objective means of determining vestibular condition. It is concluded that the determination of respiratory minute volume taking into account other vegetative reactions appears to be a useful means of evaluating subject vestibular stability. A.L.W.

**A82-11924** **Salyut 6 medical monitoring techniques.** J. Powell. *Spaceflight*, vol. 23, Nov. 1981, p. 317, 318.

Equipment and techniques used aboard the Salyut 6 space station to study weightlessness adaptation during prolonged space flights is examined as a means of gaining insight into Soviet approaches to the study of the effects of the zero-g environment. The Polinom 2M apparatus is basically a versatile electrocardiograph, used for simple electrocardiographic examination, the study of the phasic structure of the electrocardiograph, and the recording of cardiograms at compression of the vessels around the tibia, at the right jugular vein, and at the carotid and radial arteries, as well as continuous monitoring for up to 24 h to investigate periodic bioelectric deviations. The Rheograph 2 is designed to measure blood flow in the weightless body at the head, torso, forearm and crus. The Beta instrument is an electrocardiograph covering indices not measured by Polinom 2, using a zonal system for fixing electrodes and sensors at the DS contact. The instruments are designed to be used with the cosmonauts at rest, during exercise, and while wearing a lower body negative pressure suit. Possible future developments include the use of a small experimental centrifuge to determine the optimal amount and duration of artificial gravity to prevent adverse effects of zero-g flight. S.C.S.

A82-12036 # **Biaxial finite deformations of arterial and venous segments under + or - G/z/ acceleration stress.** X. J. R. Avula (Missouri-Rolla, University, Rolla, MO). In: Emerging technologies in aerospace structures, design, structural dynamics and materials; Proceedings of the Aerospace Conference, San Francisco, CA, August 13-15, 1980. New York, American Society of Mechanical Engineers, 1980, p. 141-148. 15 refs.

Recent developments in spacecraft and high performance aircraft have resulted in the exposure of the human body to acceleration trauma which manifests itself in circulatory impairment. To aid in the design of life support systems for aerospace maneuvers, the radial and axial deformations of the arterial and venous segments under dynamic fluid loads caused by blood pooling during G/z/ acceleration are calculated. Linearized Navier-Stokes equations for blood flow and equations of large elastic deformation theory for blood vessel deformations are used. The resulting nonlinear partial differential equations, which are coupled, are solved numerically. The proposed scheme is useful to estimate cardiac insufficiency under acceleration stress of the aerospace environment. (Author)

A82-12223 † **Neurophysiological bases for the effects of trace elements (Neiro-fiziologicheskie osnovy deistviia mikroelementov).** V. S. Raitses. Leningrad, Izdatel'stvo Meditsina, 1981. 152 p. 232 refs. In Russian.

The role of trace elements in the functioning of the nervous system is discussed. The concentration and distribution of trace elements in the nervous system are considered, and changes in these concentrations in response to the conditions of basic nervous processes are examined. The role of interoceptors in the regulation of trace element exchanges and the exchange of associated metalloproteids is examined based on experimental results, and the influence of several trace elements on the functioning of the vegetative and central nervous systems and on neuromuscular transmission is discussed. Finally, consideration is given to the use of various trace elements for therapeutic purposes. A.L.W.

In French.

Implications of the diagnosis of sarcoidosis in flight personnel for their future flight status are discussed on the basis of experience in six such cases. All six cases were discovered during routine radiological examinations, of which four were in the first stage requiring no treatment and the remaining two were in the second stage, at which corticoid treatment may be employed to prevent complications or transition to the third stage, in which flight disqualification is inevitable. Conventional means for the diagnosis of sarcoidosis, which are usually used jointly, are identified, and the development of the technique of broncho-alveolar lavage is noted. Consequences of the disease influencing pilot capability are identified, and the problem of determining the flight risks associated with these symptoms are discussed, with particular attention given to the assessment of the risks of cardiac sarcoidosis in patients not displaying myocardial symptoms but who are at a large risk of sudden death. Further studies involving cardiac catheterization to determine the relationship between electrocardiographic abnormalities and sarcoidosis are recommended. A.L.W.

A82-12311 **Aircraft cabin furnishing materials - A toxicological problem (Les matériaux d'aménagement des cabines d'aéronefs - Un problème toxicologique).** P. E. Picart, J. P. Delcroix, and M. Guerbet. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 2nd Quarter, 1981, p. 107-111. 29 refs. In French.

The current state of research on the toxicity of aircraft cabin materials in the event of a cabin fire is reviewed. The evaluation of the dose-response relation which lies at the base of all toxicological studies is discussed, and a distinction is made between lethal and sublethal doses. The laboratory, half-scale and full-scale models of fires used to establish doses and the animal models used to establish physiological and behavioral responses to intoxication are then examined. A distinction is made between studies aimed at ranking materials in order of increasing time to death and those seeking to establish dose-response parameters in order to explain observed phenomena and lead to an improvement in the materials used. It is pointed out that much remains to be done before a simple, reproducible and standardizable method for the classification of materials according to potential danger in the event of a fire can be established. A.L.W.

A82-12312 **Presbyopia in flight personnel - Its repercussions and correction (La presbytie chez le personnel navigant: Ses repercussions - Sa correction.** P. J. Manent, M. Maille, J. C. Ballion, and C. Mauclair (Centre Principal d'Expertise Médicale du Personnel Navigant, Paris; Hôpital d'Instruction des Armées Dominique Larrey, Versailles, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 2nd Quarter, 1981, p. 112-115. In French.

The consequences for flight personnel of the development of presbyopia are discussed, and various solutions to the problem are examined. The visual information available to flight personnel from within and outside the vehicle is reviewed, along with the visual strategies associated with visual work in the detection, identification and interpretation of data and the morphoscopic, brightness-discrimination, color-discrimination and spatial aspects of visual physiology. The physiopathology of presbyopia is then presented, and its consequences for visual acuity, the visual field, visual efficiency, oculo-motor equilibrium and visual performance in certain color ranges are identified. Classical solutions to the problems associated with presbyopia represented by unifocal and bifocal lenses are examined, and the advantages of the recently developed progressive bifocal lenses for visual acuity, and visual field are pointed out. Statistical data revealing the prevalence of presbyopia in the general population and in flyers are also presented which demonstrate the importance of the problem. A.L.W.

A82-12313 **The importance of volumetric and anthropometric techniques in the measurement of lean body mass (Intérêt des techniques volumétriques et anthropométriques pour la mesure de la masse maigre).** B. Sesboué, A. Boulier, J. F. Petiot, and J. Fabre (Caen, Centre Hospitalier Universitaire, Caen, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 2nd Quarter, 1981, p. 115-118. 12 refs. In French.

The applicabilities of densimetric and anthropometric approaches to the measurement of lean body mass or, equivalently, percentage body fat, in humans are investigated. Measurements of body volume obtained by a water displacement volumeter and skin fold thicknesses in 13 locations obtained by Harpenden calipers were used to derive body densities and body fat percentages in 52 male and 45 female medical students. Mean percentages of body fat of 15.69 percent and 25.96 percent were obtained from the densitometric data for the males and females, respectively, in agreement with literature data. A step-by-step multiple regression analysis was then used to establish empirical relations for the calculation of fat mass on the basis of four measurements for men and women. The densimetric technique is concluded to be a very important laboratory technique for the determination of body composition, although anthropometric techniques exhibit advantages due to their extreme simplicity. A.L.W.

**A82-12314** **A follow-up on blood pressure in two groups of air traffic controllers (Un follow-up de la tension sanguine chez deux groupes de controleurs de la circulation aérienne).** E. Evrard. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 2nd Quarter, 1981, p. 119-127. 5 refs. In French.

Results are presented of a follow-up study of hypertension in 199 civil and 304 military air traffic controllers. Blood pressure was monitored in the controllers and in assistant controllers not sharing the responsibilities of the controller in an initial examination and at least five times annually afterwards for a period of 6 to 16 years. The proportion of controllers exhibiting excessive levels of blood pressure is found to be small, amounting to 6.53 percent in the civil radar controllers and 3.29 percent in the military controllers. The importance of obesity as well as extraprofessional factors such as nutrition, personal hygeine, physical activity and alcohol consumption in the etiology of the disease is emphasized, and it is concluded that stresses associated with the professional duties of the air traffic controller have no causal or facilitative influence on the development of hypertension. A.L.W.

**A82-12315** **Peripheral chorioretinal lesions and aeronautical flight personnel - Consequences for fitness (Lésions chorio-rétiniennes périphériques et personnel navigant de l'aéronautique - Conséquences sur l'aptitude).** J. C. Ballion and P. J. Manent (Centre Principal d'Expertise Médicale du Personnel Navigant, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 2nd Quarter, 1981, p. 128-132. 21 refs. In French.

The nature, significance and treatment of peripheral degenerative chorioretinal lesions discovered in flight personnel are discussed. The types of lesions encountered are considered, including lesions of external, middle and internal retinal layers and retinal dehiscences, the latter two of which are capable of giving rise to retinal detachment, and the treatment of these lesions to prevent detachment by means of diathermy, cryotherapy, xenon photocoagulation and laser irradiation is considered. The indications and risks of treatment are discussed, and results of a clinical study of civil and military flight personnel exhibiting retinal degenerations are presented in which 20 percent of the patients diagnosed as having retinal lesions, representing 0.3 percent of the total population examined, underwent prophylactic treatment, rendering them temporarily unfit for duties. In light of the possible consequences of peripheral chorioretinal lesions and their frequency in flight personnel, it is recommended that such personnel be regularly examined by in-depth opthalmoscopy performed by specialists. A.L.W.

**A82-12316** **Aphakia in the flier - Its consequences and correction (L'aphakie du navigant: Ses conséquences - Sa correction).** P. J. Manent, M. Maille, F. G. de Liniers, and C. Mauclair (Centre Principal d'Expertise Médicale du Personnel Navigant, Paris; Hôpital d'Instruction des Armées Dominique Larrey, Versailles, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 20, 2nd Quarter, 1981, p. 133-135. In French.

The implications of and possible means of correcting for aphakia resulting from the extraction of a cataractous lens in flight personnel are discussed. The anatomical and functional consequences of lens removal, which results in a decompartmentation of the ocular globe on the one hand and modifications in light and color sensitivity, and hypermetropia on the other, are considered, and the treatment of the condition by the use of eyeglass lenses, contact lenses, and intraocular implants is examined. The fitness of the aphakic flier is then discussed in relation to the anatomical and functional consequences of the surgical intervention, and the mode of correction employed, and it is noted that while contact lenses represent a significant improvement over eyeglasses, allowing the flier to resume flight duties, the perfection of introacular implants would open new possibilities for the aphakic flier. A.L.W.

**A82-12538** **Design, development, and verification of Life Sciences experiments.** C. W. G. Fulcher (Management and Technical Services Co., Houston, TX). In: The year of the Shuttle; Proceedings of the Eighteenth Space Congress, Cocoa Beach, FL, April 29-May 1, 1981. Cocoa Beach, FL, Canaveral Council of Technical Societies, 1981, p. 5-1 to 5-9.

The Life Sciences Flight Experiments Program conducts a continuing coordinated program of biomedical research in space, in order to determine the effects of space flight on man and other organisms, study basic questions in biology, and apply new understanding of such phenomena to the safe and efficient use of space by man. A NASA-industry-academic team has been developed to design, develop, test, and operate Life Sciences payloads for Space Shuttle flights. Ames Research Center works with Lyndon B. Johnson Space Center and NASA Headquarters' Life Sciences Division in the development of scientifically balanced payloads. Life Sciences experiments designated for flight aboard Space-lab-1 include studies of vestibular/space sickness, cardiovascular and cardiopulmonary changes, renal fluid shifts and endocrine control, hematology, and bone-muscle reaction. Reflyable Life Sciences laboratory equipment is also being developed and certified for flight. J.F.

**A82-12648** **Kevlar aramid composites in life-saving equipment.** J. A. Van Haastert and I. Rosenberg (A-T-O, Inc., Scott Aviation Div., Sierra Madre, CA). In: Kevlar composites; Proceedings of the Symposium, El Segundo, CA, December 2, 1980. El Segundo, CA, Technology Conferences, 1980, p. 52-57.

The design and development of a Kevlar safety helmet for aircrew members is described. Noting that high-g forces can increase the weight of a human head with a helmet to 180 lbs, a necessity to reduce weight and retain protective strength was perceived. Helmets possessing twice the tensile strength of fiberglass were fabricated using the same techniques as fiberglass fabrication, and it was found that only anhydride-cured epoxides suffer strength degradation if moisture is present during curing. The use of test laminates with a planned fabric layup system and resin is recommended for Kevlar users. The helmet was trimmed to expand visibility and the visor was aerodynamically reconfigured to produce an airfoil shape with no lift; further improvements are discussed. The importance of upgrading aircrew member safety equipment to keep pace with the increasing sophistication of flight vehicles is stressed. D.H.K.

Plankton samples were investigated for physical and chemical leaching decomposition to identify the major and trace element composition of particulate carrier phases. The identification of trace element/major element ratios in the biogenic materials was emphasized. The majority of the trace elements in the samples were directly associated with the nonskeletal organic phases of the plankton. Calcium carbonate and opal were not significant carriers for any of the trace elements studied. A refractory phase containing Al and Fe in terrigenous ratios was present in all samples, even from the more remote marine locations. E.A.K.

Four macrocytic anemias, five hemolytic anemias, nonhemolytic microcytic anemia, transitory siderocytic anemia, sex-linked iron-transport anemia, and a target-cell anemia were studied. Each of these blood dyscrasias is caused by the action of a unique mutant gene, which determines the structure of different intracellular molecules, and thus controls a different metabolic process. Each anemia was studied through: characterization of peripheral blood values, determinations of radiosensitivity under a variety of conditions, measurements of iron metabolism and heme synthesis, histological and biochemical study of blood-forming tissue, functional tests of the stem cell component, examination of responses to erythroid stimuli, and transplantation of tissue between individuals of differently affected genotypes. Recently developed models in photosynthesis are described. The Mg-tris(pyrochlorophyllide)1,1,1-tris(hydroxymethyl) ethane triester in its folded configuration is a rudimentary antenna photoreaction center model. Self assembled chlorophyll systems that contain a mixture of monomeric, oligomeric and special pair chlorophyll are shown to have fluorescence emission characteristics. It is suggested that energy transfer between different chlorophyll species in these systems is more complex than previously suspected. DOE

Ronald Richard Hosey 1981 235 p
Avail: Univ. Microfilms Order No. 8118368

A finite element model of the human head and neck, as a system, is presented which incorporates the brain and skull models of previous investigators and a model of the cervical spine into a single model. The exact geometry of the cerebrospinal fluid (CSF) space is included, and morphological continuity of the CSF space and brain material in the region of the head/spine connection is maintained in order that the proper flow of material between the head and spinal cavity may take place during a simulated head impact or whiplash. The 3-dimensional geometry of the brain, spinal cord, CSF space, cervical vertebrae, and the intervertebral disks is defined by means of eight-node, isoparametric brick elements. Dissert. Abstr.

**N82-10708** Loyola Univ., Chicago, Ill.
**THE ROLE OF SKIN TEMPERATURE IN THE CONTROL OF SWEATING IN MAN Ph.D. Thesis**
Thomas Vincent McCaffrey 1981 126 p
Avail: Univ. Microfilms Order No. 8119982

The role of cutaneous thermal receptors in the control of thermoregulatory sweating in men and particularly the specialized role of the head skin temperature in thermoregulatory sweating was investigated. It is suggested that tympanic membrane temperature, and oral temperature, may be affected by thermal exchange occurring between the arteries and veins in the cervical and cephalic regions. Sweating rate increases when head skin temperature increases and when the tympanic membrane and oral temperatures begin to rise. When head skin temperature decreases tympanic membrane and oral temperatures decreases and sweating rate followed the changes in skin temperature as well as the changes in tympanic membrane and oral temperatures. It is shown that head skin temperature is important in determining thermal comfort and sweating rate when compared to other body regions. It is suggested that this sensitivity is in part due to a thermal counter-current exchange between venous blood draining the head and arterial blood ascending to intracranial thermal receptors. Dissert. Abstr.

**A COMPUTATIONAL THEORY OF VISUAL SURFACE INTERPOLATION**
W. E. L. Grimson Jun. 1981 77 p refs
(Contract N00014-80-C-0505; Grant NSF MCS-77-07569)
(AD-A103921; AI-M-613) Avail: NTIS HC A05/MF A01 CSCL 06/4

A computational theory of the interpolation of surfaces from visual information is presented. However, the surface must agree with the information from stereo or motion correspondence, and not vary radically between these points. Using the image irradiance equation, an explicit form of this surface consistency constraints is derived and a functional from the space of functions to the real numbers is required. Conditions on the form of the functional are derived. It is concluded that if the functional is a complete seminorm which satisfies the parallelogram law, or the space function is a semi-Hilbert space and the functional is a semiinner product, then there is a unique surface which is most consistent with the visual information. E.A.K.

John M. Rubin and W. A. Richards May 1981 34 p refs
(Contract N00014-80-C-0505; Grant NSF MCS-79-23110)
(AD-A103926; AI-M-631) Avail: NTIS HC A03/MF A01 CSCL 05/1

A preliminary goal for color vision to determine where changes of material occur in a scene, using only spectral information was analyzed. It is posted that the effects of many processes are confounded with the effects of material changes in the available image intensities and material changes are essentially arbitrary. A unique condition, the spectral crosspoint, allows rejection of hypothesis that measured image intensities arise from one of the confounding processes. Image intensities are measured from regions on opposite sides of an edge. The biological visual system interprets spectral crosspoints across edges as material changes. A circularly symmetric operator is designed to detect crosspoints which resemble the double opponent cell which is commonplace in biological color vision systems. E.A.K.

Subjective contours, according to one theory, outline surfaces that are apparently interposed between the viewer and background (because of the disruption of background figures, sudden termination of lines, and other occlusion 'cues') but are not explicitly outlined by intensity discontinuities. This theory predicts that if occlusion cues are not interpreted as evidence of occlusion, no intervening surface need be postulated, hence no subjective contours would be seen. This prediction, however, is difficult to test because observers normally interpret the cues as occlusion evidence and normally see the subjective contours. This article describes a patient with visual agnosia who is both unable to make the usual occlusion interpretations and is unable to see subjective contours. He has, however, normal ability to interpret standard visual illusions, stereograms, and in particular, stereogram versions of the standard subjective contour figures, which elicit to him strong subjective edges in depth (corresponding to the subjective contours viewed in the monocular versions of the figures). A method for quick selective analysis of the cadmium content in organs like kidneys and the liver with the use of neutron activation was developed. The method is based on the measurement of prompt gamma radiation emitted by the neutron absorption in the Cd 113 isotope. The sensitivity of the analysis is high. With neutrons in the intermediate energy interval, 1 to 100 KeV, organs at different distances in the body are selectively analyzed. The amount of cadmium in the kidneys of normal people are analyzed with sufficient accuracy so that the dose in the most exposed tissues does not exceed 40 mrad, of which more than half are from gamma rays. With cadmium amounts higher than the normal in the kidney tissues, the doses decrease proportionnaly. Author (ESA)

### CARDIORESPIRATORY RESPONSES AND HANDGRIP ISOMETRIC COMPONENT FOR VARIOUS WHEELCHAIR PROPULSION SYSTEMS Ph.D. Thesis

Douglas Peter Beal 1981 182 p
Avail: Univ. Microfilms Order No. 8115083

Three types of wheelchair propulsion systems for cardiorespiratory responses normal synchronous (sync) handrim propulsion, an asynchronous (async) system of application of force to the handrims, and an arm crank system of propulsion were studied. The static exercise component of the handgrip muscles for these three methods of wheelchair propulsion were compared and a test protocol which measures these variables under equivalent conditions at submaximal and maximal power output (PO) levels, on both able bodied (AB) and wheelchair dependent (WD) subjects was employed. It is found that the static component directly related to the relative intensity of each exercise mode. Similar static components were found for sync and async handrim propulsion, whereas a higher static component was found for arm cracking. It is indicated that the sync propulsion method is slightly more stressful than the async method, and that the arm crank propulsion system significantly reduces the stresses associated with wheelchair locomotion. Dissert. Abstr.

**N82-10719** Florida State Univ., Tallahassee.

### THE EFFECTS OF COLD- AND EXERCISE-INDUCED ALTERATIONS IN SKIN AND CORE TEMPERATURE ON SUBSTRATE MOBILIZATION AND UTILIZATION Ph.D. Thesis

Bernard F. Hurley 1981 134 p
Avail: Univ. Microfilms Order No. 8117944

The effects of altering skin and core temperature by cold exposure and exercise on substrate mobilization and utilization were examined. The significance of the effects of skin and core temperatures on the variables of interest was determined. It is indicated that free fatty acid, glucose, lactate, hemoglobin, and hematocrit concentrations significantly increase during rest when both mean skin temperature and rectal temperature are induced. It is concluded that reductions in both skin temperature and rectal temperature are necessary during cold exposure to produce increases in substrates, hemoconcentration, lactate, and oxygen consumption. Fat mobilization and utilization occurs during exercise in the cold only if reductions in both skin and rectal temperature are produced. Dissert. Abstr.

### PHYSIOPATHOLOGY AND PATHOLOGY OF SPINAL AILMENTS IN AEROSPACE MEDICINE [PHYSIOPATHOLOGIE AT PATHOLOGIE DES AFFECTION DUR RACHIS EN MEDECINE AEROSPATIALE]

R. P. Delahaye, R. Auffret, P. Doury, C. Kleitz, A. Leger, G. Leguay, P. J. Metges, J. L. Poirier, B. Vettes, and H. Viellefond Apr. 1981 336 p refs In FRENCH
(AGARD-AG-250-FR; ISBN-92-835-2108-0) Avail: NTIS HC A15/MF A01

Spinal problems in aerospace medicine are reviewed. Opinions are expressed in the areas of etiology, diagnosis and prognosis for lesions in the spinal column, injuries which are activated by piloting rotary wing aircrafts, conventional airplanes, gliders, or by parachute jumping. It is concluded that this information is helpful in aerospace medicine, the medical physiology of flying personnel, and also in the enforcment of flight safety. Transl. by E.A.K.

### A MONTE-CARLO SIMULATION INVESTIGATING MEANS OF HUMAN-COMPUTER COMMUNICATION FOR DYNAMIC TASK ALLOCATION

Mark E. Revesman Aug. 1981 39 p refs Presented at the IEEE Intern. Conf. on Cybernetics and Soc., Atlanta, Oct. 1981 Submitted for publication
(Contract N00014-81-K-0143)
(AD-A103890; CSIE-81-1) Avail: NTIS HC A03/MF A01 CSCL 05/8

This paper investigates human-computer communication in multitask decision making situations. It is proposed that tasks in these systems be allocated in a dynamic manner. Communication between human and computer is essential for dynamic allocation to enhance system performance. Simulation experiments investigate two modes of communication: implicit, in which the human's planned actions are relayed to the computer by the use of model of the human's decision strategy , and explicit, in which the human overtly describes his decisions to the computer. Results indicate that implicit communication can significantly enhance system performance if the computer uses a method of decision making which complements that of the human. Explicit communication can greatly enhance system performance, but there is an inherent cost in the time it takes the human to transmit his decisions to the computer. It is concluded that the costs of both methods can be traded off so that either implicit or explicit communication may be useful in different situations. Further research is suggested for defining complementary strategies using human models and for investigating trade-offs between implicit and explicit communication. Author (GRA)

### THE INFLUENCE OF BEARD, BEARD-STUBBLE AND AGE WRINKLES ON THE ADJUSTMENT OF PROTECTIVE MASKS [INVERKAN AV SKAEGG, SKAEGGSTUBB OCH AALDERSRYNKOR PAA SKYDDSMASKTILLPASSNING]

Per-Gunnar Joensson Nov. 1980 32 p refs In SWEDISH
(FOA-A-40034-C2/A2/ B2) Avail: NTIS HC A03/MF A01

Tests were conducted with eight different types of respirators on 31 men, newly shaven and then after 8, 24, 48 and 96 hours of beard growth. Two types of safety devices covering nose and mouth, i.e., four complete gas masks and two with pressurized air, were investigated. With three of these masks a notable worsening in the adjustment is noticeable after only eight hours beard growth. The same eight protective devices were also tested on 20 full-bearded men. No satisfactory protection is recorded. Wrinkled skin can also lead to a less favorable performance. The influence of this factor was tested on 56 retired men and women with two safety devices covering nose and mouth and four different gas masks. The adjustment is significantly less tight than on younger persons. Author (ESA)

Male Wistar rates were kept hypokinetic by placing them in small containers for 22 days. Blood plasma cAMP content was subsequently found increased, and cGMP content decreased, in the experimental animals. Liver and thymus cAMP content was similar in the control and experimental animals. There was a 20 and 38% decrease of cAMP content in the kidneys and spleen, respectively. Hypokinesia's reduction of cyclic nucleotides seems to inhibit RNA and protein synthesis. Author

Studies of the gastrocnemius muscle were carried out in 4 month old cockerels of the laying hybrid after hypokinesis lasting 15 and 30 days. It was found that restricted movement resulted in dystrophic changes of myofibrils, enlargement of the sarcoplasmic reticulum and oedem of interfibrillar spaces. Histochemical studies revealed focuses of increased activity of non-specific esterase, decreased activity of dehydrogenase of lactic acid and a positive reaction of acid phosphatase. T.M.

Avail: JPRS, Arlington, Va.

A dimensional and structural model of the human memory depository is presented. Quantitative estimates of the size of the memory depository are made and the organization of the system of memory traces in a hypothetical functional space of the memory is described in psychological terms. In the model, the volume (capacity) of the depository refers to the number of storage units in it, while the concept of structure characterizing the distribution of traces in the depository is interpreted as the structure of order. Only those parts of the depository that are responsible for fixing traces of various forms of symbolic material, such as meaningless syllables, words, or the graphic signs of a written language, are considered. **ON THE ACTIVE PART PLAYED BY THE HEART IN THE VENOUS RETURN OF THE BLOOD**
W. Bohme Jun. 1980 104 p refs Transl. into ENGLISH from Ergeb. Physiol. (West Germany), v. 38, 1936 p 251-338
(RAE-Lib-Trans-2017; BR79520)

Evidence from X-ray experiments supporting the idea that the heart sucks blood into the atria during systole is reviewed. Both X-ray cinematography and kymography were used in studies on animals and humans with and without contrast media. When the volume of the ventricles decreases during systole, the volume of the atria increases markedly as the valve plane descends towards the apex, the calibre of the venae cavae decreases, and as shown by experiments involving injection of droplets of iodine containing oil, the blood accelerates towards the heart. Various pathological conditions, including respiratory and cardiac failure, pneumothorax, air and oil emboli, and the effects of some pharmacological agents are also discussed. A.R.H.

**MECHANICAL IMPEDANCE OF THE HUMAN OUTER EAR**
H. Els and J. Schroeter Feb. 1981 21 p refs Transl. into ENGLISH from Forschungsber. (West Germany), no. 238, 1980
(RAE-Lib-Trans-2065; BR80139) Copyright. Avail: Issuing Activity

The lack of a quick, cheap and accurate method of measuring the attenuation provided by hearing protectors hampered the development of these devices. Many efforts to provide such a method involved the design of an objective test apparatus or 'artificial head'. A major drawback to this solution was the lack of detailed information about the mechanical characteristics of the skin/flesh layer at the point of contact between the protector and the head of a wearer. The measurement of the mechanical impedance of the skin/flesh layer of 100 subjects at four points in the circumaural region and at a point in the outer ear canal is described. The application of these data to the design of an artificial skin/flesh layer for use on an 'artificial head' is discussed. T.M.

**AIRWAY GAS MIXING DURING REST AND BICYCLE EXERCISE Ph.D. Thesis**
Deborah Marie Drechsler 1981 96 p
Avail: Univ. Microfilms Order No. 8120419

The increase in dispersion of an inert tracer bolus of helium or sulfur hexafluoride was used as a direct, non-invasive measure of longitudinal gas mixing in the conducting airways. Three types of experiments were performed. Firstly, inspiratory flow rate was varied between 0.2 and 1.8 l/s while the expiratory flow rate was held constant at 0.4 l/s. Measurements were made at penetration volumes (V) of 30, 90, and 150 ml, and tidal volume was 600 ml. The negative correlation of mixing with inspiratory flow rate at all three values of V suggests that airway gas mixing during inspiration is by turbulence. During the second group of experiments expiratory flow rate was varied from 0.2 to 2.5 l/s, and inspiratory flow rate was held constant at 0.4 l/s. The positive correlation of mixing with expiratory flow rate at all three values of V leads to the conclusion that airway gas mixing during expiration is by Taylor diffusion. The third group of experiments investigated the extent of cardiogenic gas mixing by comparing inert gas dispersion during bicycle ergometer exercise at 35 prcent V sub O2 max to that dispersion occurring with matched respiratory maneuvers at rest.

**HUMAN LYMPHOCYTE CALCIUM METABOLISM Ph.D. Thesis**
Andrew Harry Lichtman 1981 207 p
Avail: Univ. Microfilms Order No. 8122380

A technique was developed for measuring the calcium content of a small number of cells using a graphite furnace atomic absorption spectrophotometer. The sensitivity of the graphite furnace technique was 60 times higher and the detection limit was 1500 times lower than a conventional flame atomic absorption technique. The low detection limit of the graphite furnace technique permitted studies of calcium metabolism in the available numbers of human lymphocytes. In the absence of serum, the lymphocyte calcium content doubled as the medium calcium concentration was increased from 1 micro mol/l 0.5 mmol/l. At medium calcium concentrations of 0.5 mmol/l and above, the lymphocyte calcium content was 1.0 mmol/l cells. In medium adjusted 2 mmol/l calcium, the lymphocyte calcium content doubled as the medium serum concentration was increased from 0 to 2 percent. At medium serum concentrations of 2 percent and above, lymphocyte calcium content was 2 mmol/l cells. Dissert. Abstr.

An occlusive cuff system comprises a pressure cuff and a source of regulated compressed gas feeding the cuff through an electrically operated fill valve. An electrically operated vent valve vents the cuff to the ambient pressure. The fill valve is normally closed and the vent valve is normally open. In response to an external start signal, a logic network opens the fill valve and closes the vent valve, thereby starting the pressurization cycle and a timer. A pressure transducer continuously monitors the pressure in the cuff. When the transducer's output equals a selected reference voltage, a comparator causes the logic network to close the fill valve. The timer, after a selected time delay, opens the vent valve to the ambient pressure, thereby ending the pressurization cycle.

(Contract NASw-3199)
(NASA-TM-76520) Avail: NTIS HC A02/MF A01 CSCL 06P

The problem of normal values of blood pressure after exercise taking into account the blood pressure at the end of the exercise test is discussed. Hypertensives showed a lower working capacity than normotensives. In normotensives, however, systolic blood pressure at the end of an exercise correlated well with the working capacity. After the endurance cure submaximal blood pressure was markedly lower in hypertensives with a striking dependence on the level of initial values. Systolic blood pressure at the end of an exercise test was not changed significantly. Most probably it is not possible to overcome this malregulation in hypertensives by endurance training alone. A variety of methods are presently available for the measurement of both normal individuals and patients with metabolic disorders. Chief among these methods are radiographic techniques such as radiogrammetry, photon absorptiometry, computer tomography, Compton scattering and neutron activation analysis. In this review, the salient features of the bone measurement techniques are discussed along with their accuracy and precision. The advantages of the various techniques for measuring bone mass are summarized. Where possible, intercomparisons are made of the various techniques. DOE

The interaction between chemicals which modify the biological response if exposure is simultaneous or sequential was explored. Two different situations are distinguished where interactions are caused by sequential exposure: (1) a first agent acts as an inducer or inhibitor of mixed function oxidases, this alters the response to a second, challenging agent and the nature of the biological response, is dicated by the second agent; and (2) a first agent produces slight or undetected or undetectable changes in a tissue, exposure to a second agent enhances or allows expression of the biological response determined by the first agent. Both types of interactions require an ordered sequence of exposure to two chemicals and complex dose effect and time effect relationships. DOE

**INVESTIGATION OF SPATIAL DISORIENTATION OF F-15 EAGLE PILOTS Final Report, 15 Jan. - Aug. 1980**
Dennis W. Jarvi Aug. 1981 72 p refs
(AD-A104684; ASD-TR-81-5016) Avail: NTIS HC A04/MF A01 CSCL 05/8

An extensive investigation, including F-15 pilot interviews at Eglin AFB FL, and Langley AFB VA, into the characteristics and operation of the F-15 Eagle was conducted over a seven month period. In addition, F-16 pilots at Hill AFB UT, were interviewed. The following conclusions were drawn from the information acquired: The F-15 does not possess any unusual flight handling characteristics that could lead to pilot spatial disorientation. The large bubble canopy and the pilot's sitting height in the cockpit generally do not appear to significantly contribute to spatial disorientation. The asymmetrical exterior lighting strips on the F-15 can cause confusion on the part of the wing men regarding his formation position relative to the

lead aircraft or the bank angle of the lead aircraft. Night formation join-ups, particularly from the stern, are rather difficult for the F-15 pilot due to the absence of adequate exterior lighting to provide the necessary depth perception cues for ascertaining the range and attitude of the lead aircraft. The layout of the F-15 cockpit generally manifests adherence to good human factors design principles. The F-15 Spatial Disorientation Team also uncovered some areas of potential pilot distraction. These areas, uncovered during pilot interviews, do not necessarily affect the incidence of spatial disorientation, but may add to the F-15 pilot's workload. The report includes these areas, and also makes a number of recommendations based on the results of the study.

**RECOMMENDED GUIDELINES FOR OXYGEN SELF-RESCUERS. VOLUME 1: UNDERGROUND COAL MINING Progress Report, Aug. 1979 - Dec. 1980**
D. Randolph Berry and Donald W. Mitchell Jun. 1981 52 p 2 Vol.
(Contract DI-BM-J0199118)
(PB81-225872; BM-OFR-86(1)-81-Vol-1) Avail: NTIS HC A04/MF A01 CSCL 08I

The Bureau of Mines awarded a contract for the provision of recommendations on the safest, most practical methods for complying with new regulations requiring that all underground coal miners have a self-contained, self rescuer (SCSR) -- a device capable of supplying, in an emergency, 1 hour of self-contained oxygen (no breathing of mine air). Information and recommendations that could be used during the early stages of nationwide compliance, especially in the areas of inspection, testing, and underground storage os SCSR's, are presented. An executive summary, introduction, definitions, recommended guidelines for district managers and mine operators, and a storage plan checklist and sample form are provided.

**N82-11783#** Foster-Miller Associates, Inc., Waltham, Mass. Mining Div.
**RECOMMENDED GUIDELINES FOR OXYGEN SELF-RESCUERS. VOLUME 2: APPENDICES Progress Report, Aug. 1979 - Dec. 1980**
D. Randolph Berry and Donald W. Mitchell Jun. 1981 285 p refs 2 Vol.
(Contract DI-BM-J0199118)
(PB81-225880; BM-OFR-86(2)-81-Vol-2) Avail: NTIS HC A12/MF A01 CSCL 08I

The report covers a discussion of the recommended guidelines, worldwide use of oxygen self-rescuers, hypothetical use of oxygen self-rescuers in post-1972 coal mine explosions and fires, vibration testing of self-contained, self-rescuers (SCSR's), and testing of in-service SCSR's. Discussions with representatives of underground coal mining, recommendations for SCSR storage containers, example of SCSR storage plans, testing of in-service compressed oxygen SCSR's, and 30 CFR 75.1714, 30 regulations pertaining to self-rescuers are presented.

**DARTAB: A PROGRAM TO COMBINE AIRBORNE RADIONUCLIDE ENVIRONMENTAL EXPOSURE DATA WITH DOSIMETRIC AND HEALTH EFFECTS DATA TO GENERATE TABULATIONS OF PREDICTED HEALTH IMPACTS**

D. E. Begovich, K. F. Eckerman, [illegible] and [illegible] Aug. 1981 79 p refs

(Contract W-7405-eng-26)

(DE82-003043; ORNL-5692) Avail: NTIS HC A05/MF A01

The DARTAB computer code which combines radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of the predicted impact of radioactive airborne effluents is described. DARTAB is independent of the environmental transport code used to generate the environmental exposure data and the codes used to produce the dosimetric and health effects data. The [illegible] need not be linked to every environmental transport code. Options are included in DARTAB to permit the user to request tabulations by various organs. DOE

**INVESTIGATION OF SPATIAL DISORIENTATION OF F-15 EAGLE PILOTS Final Report, 15 Oct. - Aug. 1980**

Dennis W. Jarvi Aug. 1981 73 p refs

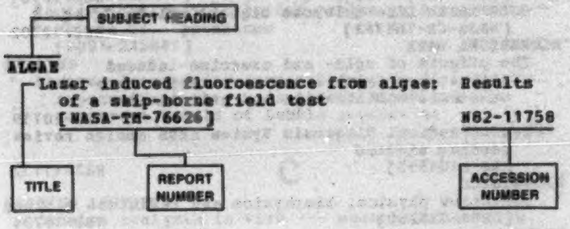
(AD-A104[illegible]; ASD/TR-81-5016) Avail: NTIS HC A04/MF A01 CSCL 05/8

An extensive investigation, including F-15 pilot interviews at Eglin AFB FL, and Langley AFB VA, into the characteristics and causation of [illegible] the F-15 Eagle was conducted over a seven month period. In addition, F-15 pilots [illegible] were interviewed. The following conclusions were drawn from the information acquired: the F-15 does not possess any unusual flight handling characteristics that could lead to pilot spatial disorientation. The large bubble canopy and the pilot's sitting height in the cockpit [illegible] to significantly contribute to spatial disorientation. The [illegible] lighting strips on the F-15 [illegible] the wing [illegible]

# SUBJECT INDEX

**AEROSPACE MEDICINE AND BIOLOGY** / *A Continuing Bibliography (Suppl. 229)* **FEBRUARY 1982**

## Typical Subject Index Listing



ALGAE
Laser induced fluoroescence from algae: Results of a ship-borne field test [NASA-TM-76626] N82-11758

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

## A

**ACCELERATION STRESSES (PHYSIOLOGY)**
- Biaxial finite deformations of arterial and venous segments under + or - G/z/ acceleration stress A82-12036

**ACCELERATION TOLERANCE**
- The significance of the respiratory minute volume index in the evaluation of vestibular stability A82-11697

**ADIPOSE TISSUES**
- The importance of volumetric and anthropmetric techniques in the measurement of lean body mass A82-12313

**ADRENAL METABOLISM**
- Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress [NASA-TM-76729] N82-11760

**ADRENERGICS**
- The effect of adrenergic substances on cardiac activity and brain electrical activity in the rabbit under hypoxia A82-12299

**ADRENOCORTICOTROPIN (ACTH)**
- Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress [NASA-TM-76729] N82-11760

**AEROSPACE MEDICINE**
- Hazards of chemicals used in agricultural aviation - A review A82-11026
- Retro-hyperflexion luxation - Mechanism of cervical spinal cord contusion injury during ejection sequence A82-11032

DEPLETION
Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757
DIAGNOSIS
Remote Medical Diagnosis System RMDS design review meeting minutes
[AD-A104555] N82-11772
DIETS
Energy expenditure and dietary change
[PB81-218471] N82-10717
DIGITAL COMPUTERS
Progress in computer analysis of the exercise electrocardiogram A82-10630
DISORIENTATION
Investigation of spatial disorientation of F-15 Eagle pilots
[AD-A104684] N82-11781
DISPLAY DEVICES
Color vision and image intensities: When are changes material?
[AD-A103926] N82-10711
DISTILLATION
Preprototype Vapor Compression Distillation Subsystem development
[ASME PAPER 81-ENAS-25] A82-10912
DISTILLATION EQUIPMENT
Application of improved technology to a preprototype vapor compression distillation /VCD/ water recovery subsystem
[ASME PAPER 81-ENAS-10] A82-10898
DIVING (UNDERWATER)
A human being in the sea. Part 2: Development trends in submarine technology --- diving apparatus, rescue techniques, marine resources
[FOA-C-58008-H3-PT-2] N82-10714
DOSIMETERS
Radiation physics, biophysics and radiation biology
[DE81-025259] N82-10704

E

EAR
Mechanical impedance of the human outer ear
[RAE-LIB-TRANS-2065] N82-11767
EARTH CRUST
Are the 3,800-Myr-old Isua objects microfossils, limonite-stained fluid inclusions, or neither A82-10550
EJECTION INJURIES
Retro-hyperflexion luxation - Mechanism of cervical spinal cord contusion injury during ejection sequence A82-11032
ELASTIC DEFORMATION
Biaxial finite deformations of arterial and venous segments under + or - G/z/ acceleration stress A82-12036
ELECTROCARDIOGRAPHY
Progress in computer analysis of the exercise electrocardiogram A82-10630
Evaluation of abnormal exercise electrocardiogram in apparently healthy subjects - Labile repolarization /ST-T/ abnormalities as a cause of false positive responses A82-10631
Variations in normal electrocardiographic response to treadmill testing A82-10632
Computer quantitation of Q-T and terminal T wave /aT-eT/ intervals during exercise - Methodology and results in normal men A82-10633
The electrocardiographic diagnosis of myocardial infarction in the presence of ventricular conduction defects - A new attempt to solve an old problem A82-11199
Noninvasive assessment of T-wave abnormalities on precordial electrocardiograms in middle-aged professional bicyclists A82-11200

ELECTROENCEPHALOGRAPHY
- Frequency analysis of EEG in rats during the preconvulsive period of O2 poisoning A82-11029
- Lack of effect of pulsed ultrasound on the mammalian EEG A82-11030

ELECTROLYSIS
- Oxygen generation subsystem for spacecraft [ASME PAPER 81-ENAS-40] A82-10925

ELECTROLYTIC CELLS
- Development status of a preprototype water electrolysis subsystem [ASME PAPER 81-ENAS-9] A82-10897

ELECTROMAGNETIC ABSORPTION
- Model systems in photosynthesis research [DE81-023889] N82-10706

ELECTROMAGNETIC FIELDS
- Interaction of electromagnetic fields with biological bodies A82-11539

ELECTROMAGNETIC INTERACTIONS
- Interaction of electromagnetic fields with biological bodies A82-11539

EMERGENCY LIFE SUSTAINING SYSTEMS
- Recommended guidelines for oxygen self-rescuers. Volume 1: Underground coal mining [PB81-225872] N82-11782
- Recommended guidelines for oxygen self-rescuers. Volume 2: Appendices [PB81-225830] N82-11783

ENDOCRINE SECRETIONS
- Instructor pilot teaching behavior and student pilot stress in flight training A82-11028

ENERGY REQUIREMENTS
- Energy expenditure and dietary change [PB81-218471] N82-10717

ENVIRONMENTAL CONTROL
- A chamber design for closed ecological systems research [ASME PAPER 81-ENAS-37] A82-10923

EPOXY MATRIX COMPOSITE MATERIALS
- Kevlar aramid composites in life-saving equipment --- helmets for fighter aircraft crews A82-12648

EXERCISE PHYSIOLOGY
- Plasma norepinephrine response to exercise before and after training in humans A82-11152
- Endurance training in the rat. I - Myocardial mechanics and biochemistry A82-11155

EXOBIOLOGY
- USSR Space Life Sciences Digest, volume 1, no. 3 [NASA-CR-164780] N82-10699
- USSR Space Life Sciences Digest, volume 1, no. 4 [NASA-CR-164781] N82-10700
- USSR Space Life Sciences Digest, volume 2, no.1 [NASA-CR-164782] N82-10701
- USSR Space Life Sciences Digest, volume 2, no. 2 [NASA-CR-164783] N82-10702

EXPOSURE
- Carbon/graphite fibers: Environmental exposures and potential health implications [PB81-229692] N82-11780

EYE DISEASES
- Peripheral chorioretinal lesions and aeronautical flight personnel Consequences for fitness A82-12315

F

FIBROBLASTS
- Radiation physics, biophysics and radiation biology [DE81-025259] N82-10704

FIGHTER AIRCRAFT
- Kevlar aramid composites in life-saving equipment --- helmets for fighter aircraft crews A82-12648

FLIGHT CREWS
- Sarcoidosis and aeronautical risk A82-12310
- Presbyopia in flight personnel - Its repercussions and correction A82-12312
- Peripheral chorioretinal lesions and aeronautical flight personnel Consequences for fitness A82-12315
- Kevlar aramid composites in life-saving equipment --- helmets for fighter aircraft crews A82-12648

FLIGHT FITNESS
- Aphakia in the flier - Its consequences and correction A82-12316

FLIGHT SAFETY
- Kevlar aramid composites in life-saving equipment --- helmets for fighter aircraft crews A82-12648

FLIGHT STRESS (BIOLOGY)
- Biaxial finite deformations of arterial and venous segments under + or - G/z/ acceleration stress A82-12036

FLIGHT TRAINING
- Instructor pilot teaching behavior and student pilot stress in flight training A82-11028

FLUORESCENCE
- Model systems in photosynthesis research [DE81-023889] N82-10706
- Laser induced fluoroescence from algae: Results of a ship-borne field test [NASA-TM-76626] N82-11758

FOOD
- Unconventional processes for food regeneration in space - An overview [ASME PAPER 81-ENAS-35] A82-10921

FOOD PROCESSING
- Treatment of CELSS and PCELSS waste to produce nutrients for plant growth --- Controlled Ecological Life Support Systems and Partially Controlled Ecological Life Support Systems [ASME PAPER 81-ENAS-19] A82-10907
- Energy expenditure and dietary change [PB81-218471] N82-10717

FOSSILS
- Are the 3,800-Myr-old Isua objects microfossils, limonite-stained fluid inclusions, or neither A82-10550

G

GAMMA RAYS
- Use of nuclear resonant scattering of Gamma rays for in vivo measurement of iron [DE81-026051] N82-11775

GAS EXCHANGE
- Increased hemoglobin-oxygen affinity does not decrease skeletal muscle oxygen consumption A82-11154

GAS GENERATORS
- Nitrogen supply system based on hydrazine dissociation [ASME PAPER 81-ENAS-27] A82-10914

GASEOUS DIFFUSION
- Factors determining temporal pattern of isobaric supersaturation --- in tissue blood gas transport models of bubble production A82-11153

GEOLOGY
- Are the 3,800-Myr-old Isua objects microfossils, limonite-stained fluid inclusions, or neither A82-10550

GLUCOSE
- Glucocorticoid receptors and metabolic disturbances in the liver and heart during immobilization A82-10750

GOALS
- Information of mission and functions of the National Bureau of Standards [PB81-228207] N82-11761

GRAPHITE
- Carbon/graphite fibers: Environmental exposures and potential health implications [PB81-229692] N82-11780

GROUND CREWS
- Hazards of chemicals used in agricultural aviation - A review A82-11026

H

HAIR
The influence of beard, beard-stubble and age wrinkles on the adjustment of protective masks [FOA-A-40034-C2/A2/ B2] N82-10722

HEAD (ANATOMY)
A homeomorphic finite element model of impact head injury N82-10707

HEART
